1. Installation Manual

This guide is designed to walk you through the step-by-step process of installing the “IFS Cloud Emissions Tracker” Application on your system, ensuring a smooth setup experience. Whether you're a beginner or an experienced user, this guide will provide clear instructions to help you get up and running quickly.

1.1. Pre-requisites

- **PowerApps User license** (Ensure that you have administrative access to the system where you intend to install the IFS Cloud Emissions Tracker. This access is necessary for configuring and managing the installation.)
- **Power BI Pro license.** (Ensure that the Power BI Pro license includes permissions to create workspaces. Workspaces are essential for organizing and managing Power BI content, including reports and dashboards related to emissions tracking.)
- **Azure Key Vault subscription.** (This setup is necessary to ensure the secure storage of data in the Cloud and to establish connections within Dataverse.)

1.2. Pre-installation Tasks

1.2.1. PowerApps Environment

Persona: Power Apps System Administrator

To install the IFS Cloud Emissions Tracker, you must have a PowerApps environment. Refer to the "[Environments Overview](#)" document on Microsoft Learn for detailed instructions on how to create an environment.

1.2.2. Power BI Workspace

Persona: Power BI Administrator

Ensure that you have the appropriate security role before installing the IFS Cloud Emissions Tracker Power BI reports. Refer to the Microsoft documentation for further information.

1.3. Installation Procedure

Follow the steps below to install the IFS Emissions Tracker Application.

Persona: Power Apps System Administrator / Power BI Administrator

1. **Download** the most recent version of the IFS Cloud Emissions Tracker Application from below links.

1.1. If you're an **IFS Cloud Customer**, planning to use IFS Cloud Data Integration feature, please use the link below.

- [IFS Cloud Emissions Tracker - With Cloud Data Integration](#)

1.2. If you're a **Non-IFS Cloud customer** or an IFS Cloud customer **not** planning to use the IFS Cloud Integration feature, please use the link below.

- [IFS Cloud Emissions Tracker - No Cloud Data Integration](#)

Note: If you use the No Cloud Integration package(Link in the 1.2 above) and wish to upgrade to the IFS Cloud Integration feature later, you can do so at any time by downloading the integration package(1.1 above) and installing it on top of your existing installation.

2. Extract the **PackageDeployment.zip** and you need to Unblock below files. (Right click on the file and from properties)

- 24R1Package.dll
- data_1033.zip file inside PkgAsset folder
- importConfig.xml inside PkgAsset folder

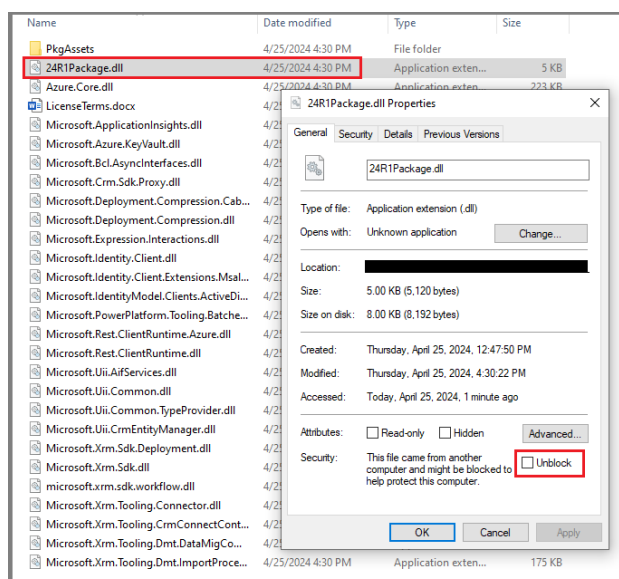

Figure 01

3. Find the **PackageDeployer.exe** inside the folder and double-click on it. This will open the package deployer tool. Select Continue.

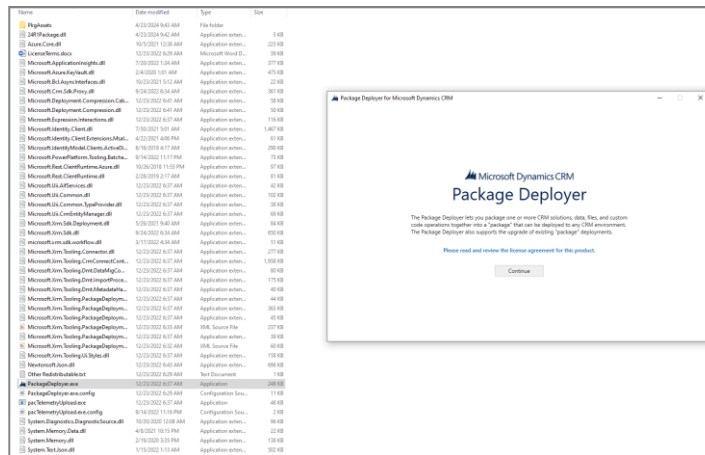

Figure 02

4. Select your Region (if known, else select don't know), Username, Password, and Login.

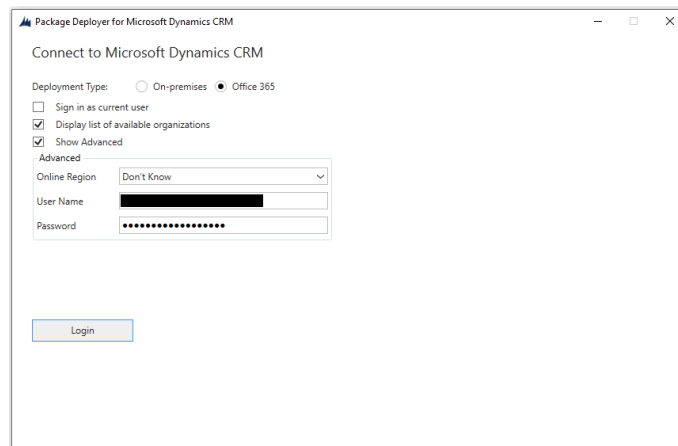

Figure 03

5. Select your Environment and **Continue**.

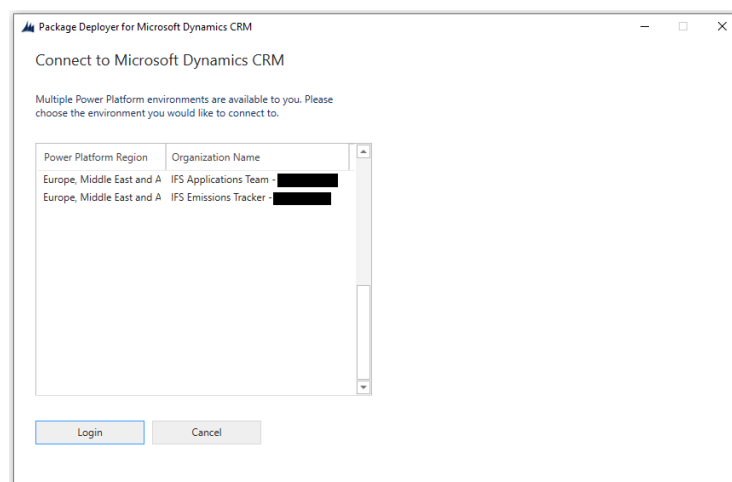

Figure 04

6. Move with selecting **Next**.

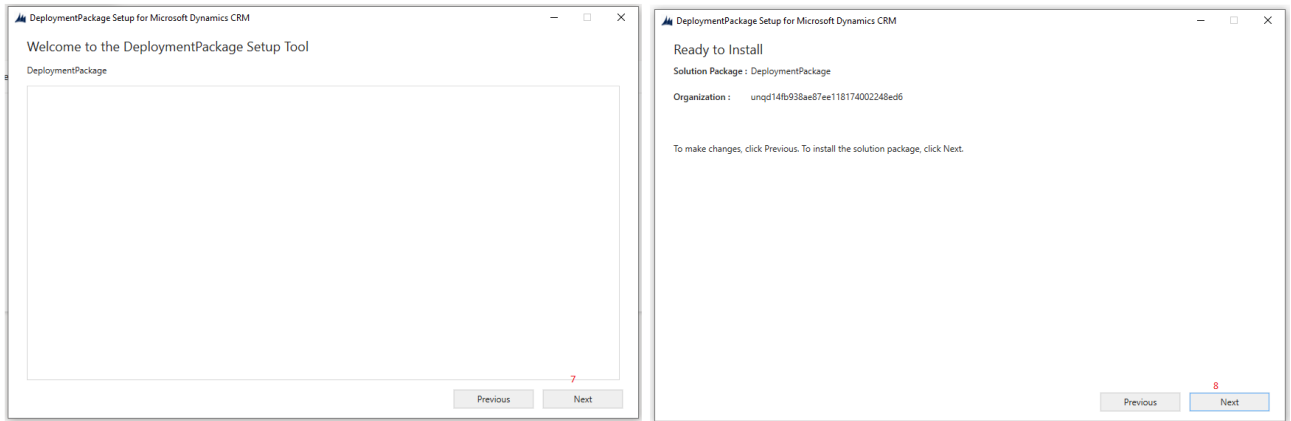

Figure 05

7. Deployer will show all the dependencies and start installing.

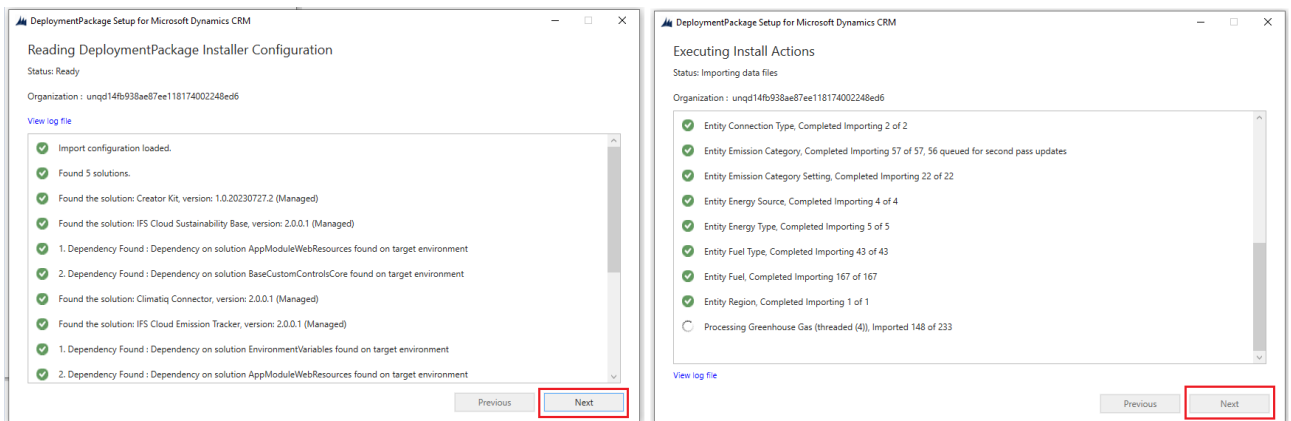

Figure 06

8. Once all the components are installed select **Finish**.

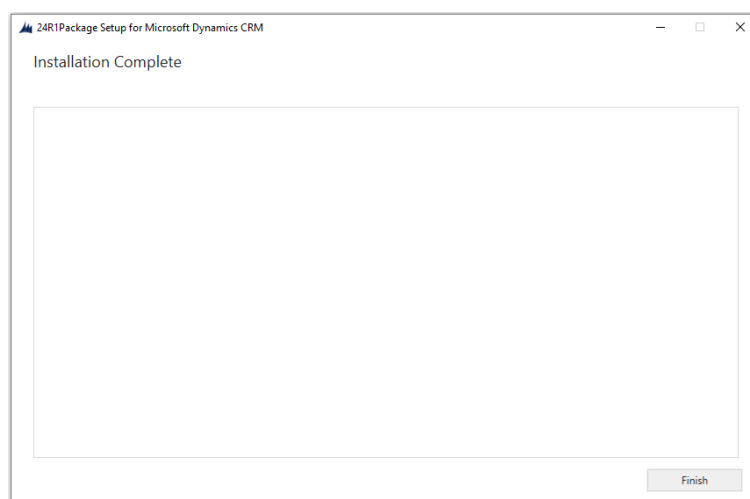

Figure 07

This will install the IFS Cloud Emissions Tracker App to Your Environment.

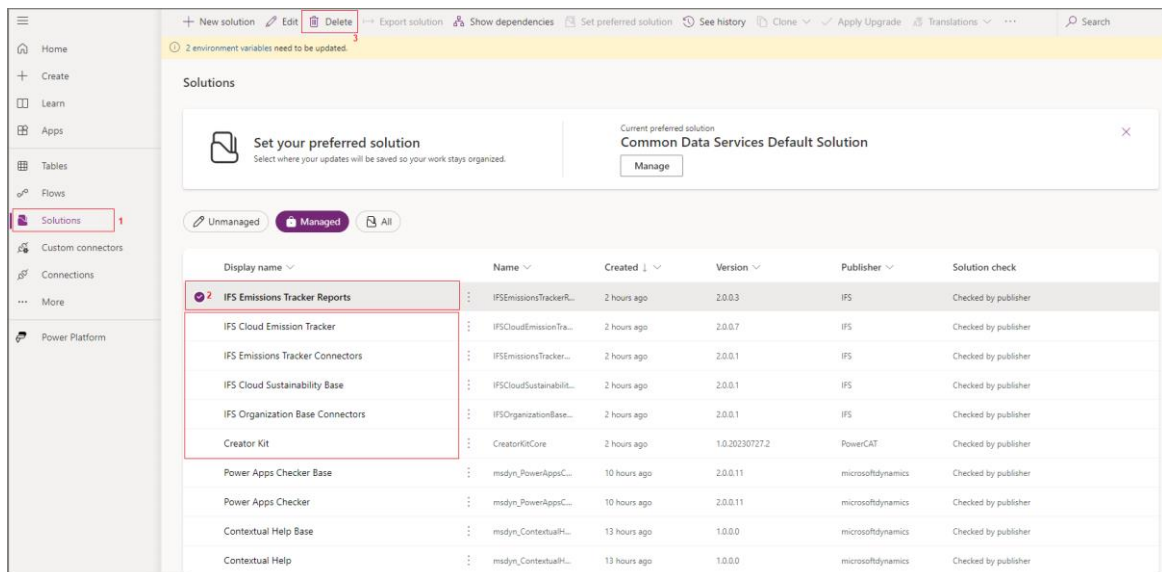

Next Steps...

Once the Installation is completed, you may follow below documentation to configure the app before starting it. Follow Step 2,

1. IFS Cloud Emissions Tracker Installation Guide (**you are here**)
2. [IFS Cloud Emissions Tracker Configuration Guide](#)
3. [IFS Cloud Emissions Tracker Analysis Model Configuration Guide](#)
4. [IFS Cloud Emissions Tracker User Guide](#)

1.4. Uninstall or Roll-back.

Go to the environment where you've installed the package. Then, navigate to the solutions section and choose each solution individually. Proceed to delete them one by one.

The screenshot shows the 'Solutions' page in the IFS Cloud Emissions Tracker interface. The top navigation bar includes buttons for 'New solution', 'Edit', 'Delete', 'Export solution', 'Show dependencies', 'Set preferred solution', 'See history', 'Clone', 'Apply Upgrade', 'Translations', and 'Search'. A notification at the top indicates '2 environment variables need to be updated'. Below this, there is a 'Set your preferred solution' section with a 'Manage' button. The main content area displays a table of solutions, with 'IFS Emissions Tracker Reports' selected. The table columns are: Display name, Name, Created, Version, Publisher, and Solution check.

Display name	Name	Created	Version	Publisher	Solution check
