1.2 Define localization

- Open the page *Company*.
- Search for the company.
- Select “France” in the drop-down list in the **Localization** field and **Save**. Note that this cannot be changed once transactions are created for the company.

The screenshot shows the 'Company' configuration page for 'DAN FRANCE - Dan France'. The 'Localization' field is highlighted with a red box and set to 'France'. Other fields include 'Country' (FRANCE), 'Default Language' (English), and 'Document Recipient Address Positioning' (Right).

2 French VAT Return (CA3)

2.1 Overview Legal Requirement

All French VAT taxpayers must file a VAT return (CA3 3310) on a monthly basis. The CA3 return information is manually entered on the tax authority's web portal.

The CA3 VAT return consists of three parts,

1. Part (A) - Amount of Operations Carried Out
All the transactions carried out under the sub sections of 'Taxable Transactions' and 'Non-Taxable Transactions (Exempted)'.
2. Part (B) – VAT to be Paid
Summary of each sales category VAT to be paid under the tax rate imposed by the tax authority. In addition, it will comprise a subsection to specify the VAT deductible part which can be deducted due to purchases of all non-capital and capital transactions.
3. VAT Credit
VAT Net Due and if the company benefit from the VAT Credit those amounts will appear on this section.

2.2 Process Overview

IFS Cloud standard tax report process based on tax transactions and tax ledger is used.

2.3 Prerequisites

Following prerequisites should be met to generate CA3 VAT Return report.

- The company must be set-up to use the French localization, see Company Set up chapter. The “French Tax Reports” localization functionality must be enabled on the *Company/Localization Control Center* tab.
- Taxable transactions must be updated to general ledger and to tax ledger.

2.4 Define Basic Data

To fetch the data into a tax template, a new **Tax Template Field Control** needs to be defined.

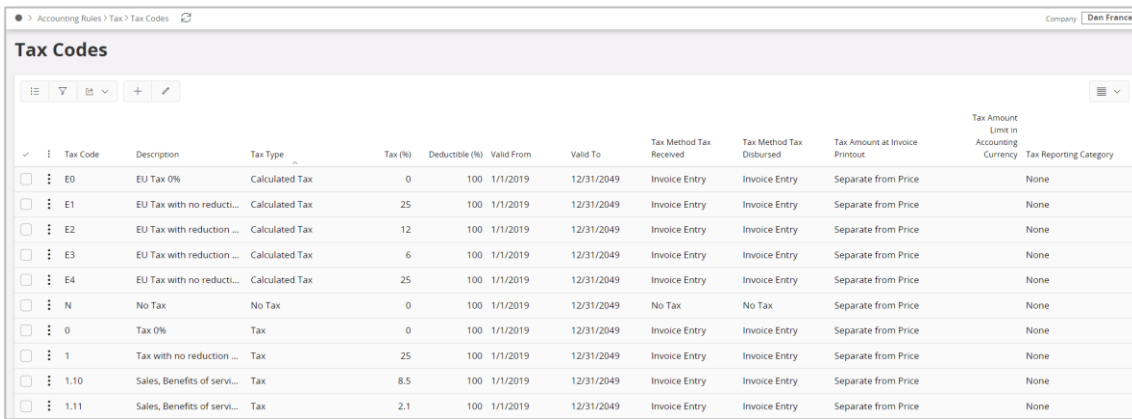

Available options for **Selection Based On** criteria for Tax Template Field Controls are,

- **Tax Codes** (Option 01)
- **Subgroups** (Option 02)

In **Tax Template Field Control Template** fields are connected to either **Tax Codes** or **Subgroup** depending on which option was chosen in **Selection Based On**. Therefore, before defining **Tax Template Field Control**, either **Tax Codes** or **Tax Group** must be defined.

2.4.1 TAX CODES

In the **Tax Codes** page define the tax codes needed for the transactions. This is standard IFS Cloud functionality, find more details in the IFS Cloud Documentation.

<input type="checkbox"/>	:	1.11	Sales, Benefits of servi...	Tax	2.1	100	1/1/2019	12/31/2049	Invoice Entry	Invoice Entry	Separate from Price	None	

Note: Transactions must be updated to general ledger and tax ledger to be included in the tax report. This is done via **Financials/General Ledger/Update GL Vouchers** and **Financials/Tax Ledger/Fetch Tax Ledger Information**.

2.4.2 TAX GROUP

If the tax template fields are to be mapped with tax sub group IDs. Define Sub Groups with **Sub Group ID** and a **Description**. In **Sub Group Details** the Sub Groups can be connected to Tax Codes. A sub group can be connected to multiple tax codes, one per row. However, a tax code can only be connected with one sub group. **Tax groups** are created in **Financials/Tax Ledger/Basic Data/Tax Group** page. This is standard IFS Cloud functionality, find more details in the IFS Cloud Documentation.

2.4.3 TAX TEMPLATE FIELD CONTROL

Go to **Financials/Tax Ledger/Basic Data/Tax Template Field Control** to connect tax codes or tax subgroup IDs (based on the Option selected) with the template fields. The connection between **Template Field** and **Tax Code** or **Sub Group ID** decides which transaction will be shown with which template field in the report.

If **Selection Based on** is chosen as “**Tax Codes**” (Option 01), **Template Fields** must be connected with the **Tax Codes** as follows.

If **Selection Based on** is chosen as “**Subgroups**” (Option 02), **Template Fields** must be connected with the **Subgroup IDs** as follows.

The two figures above are examples of setups. There are more fields available, these **Template Fields** can be removed or added and connected to **Tax Code** or **Sub Group ID** as needed for the tax report.

For IFS Cloud 23R1, existing Template Fields have been renamed and more fields have been added to comply with the French Tax office’s requirements applicable from year 2022. See attachment for all changes.

3 Declaration of fees (DAS2 Reporting)

3.1 Overview Legal Requirement

Companies in France that do businesses with independent consultants must declare all the payments made to each independent consultant to the tax authorities each year.

The information is reported via a .txt file. The file contains company level information, supplier level information, tax transactions and payment totals.

3.2 Solution Overview

The DAS2 file is generated from the *Financials/Tax Ledger/Automatic Tax Proposal* page. New Tax Template (GFR002), New External File type and Template (TaxRepFrDas2) have been defined to create the DAS2 file.

Apart from the file type and template, certain set of basic data need to be setup in order to get the required information for the DAS2 text file.

3.2.1 PROCESS OVERVIEW

Standard tax file creation flow in IFS Cloud is used in this solution.

3.3 Prerequisites

The company must be set-up to use the French localization, see chapter Company Set Up. The localization functionality “French Tax Reports” and “Address Specific Tax Registration Numbers” must be enabled on the *Company/Localization Control Center* tab.

“Supplement Tax Withholding” should be disabled in *Company/Tax Control/Invoice sub tab*.

3.4 Define Basic Data

3.4.1 DEFINE INCOME TYPE

The supplier income types used in France must be defined in *Enterprise/ Tax/Income Types* page. Supplier income types are used to categorize payments to suppliers for tax reporting and withholding purposes.

Income Type ID	Description

2. C	Commissions (Commissions)
3. CO	Courtages (Brokerages)
4. R	Ristournes (Rebates)

Therefore, 0% tax code with tax method “Payment” must also be defined in the *Tax Codes* page as a prerequisite. (Find more information in chapter Supplier Level Basic Data - Connect Tax codes for Supplier connect tax codes to supplier)

5 B2G E-Invoice (Chorus)

5.1 Overview Legal Requirement

In France, companies providing goods or services to public entities (hospitals etc.) have to send their invoices in electronic form using Chorus Pro portal. e-invoices in several file formats (UBL and Factur-X) can be automatically loaded into Chorus Pro.

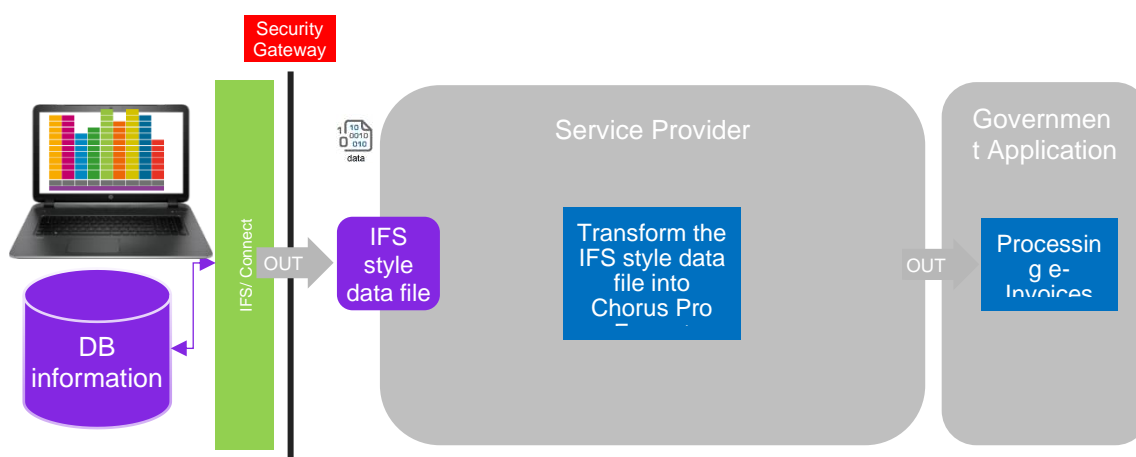

The invoices sent to public entities must include a service code. The service codes are specific for each public entity and reflects organization units or cost centers in the company. Each public customer should provide service codes applicable.

5.2 Process Overview

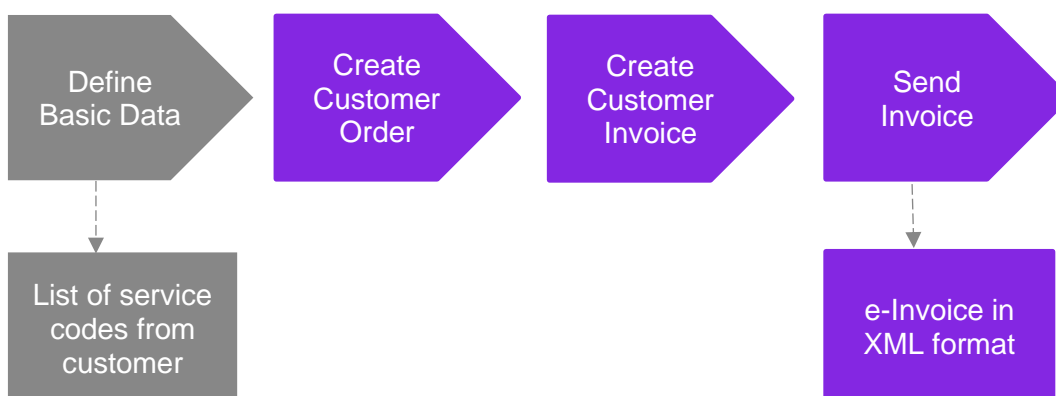

To fulfil the requirement, standard e-Invoice functionality is used as the base. Handling of service code is added to the process.

In standard e-Invoice solution, an IFS style data file is created. This can be sent to Chorus Pro portal or any other tax authority portal through a 3rd party software.

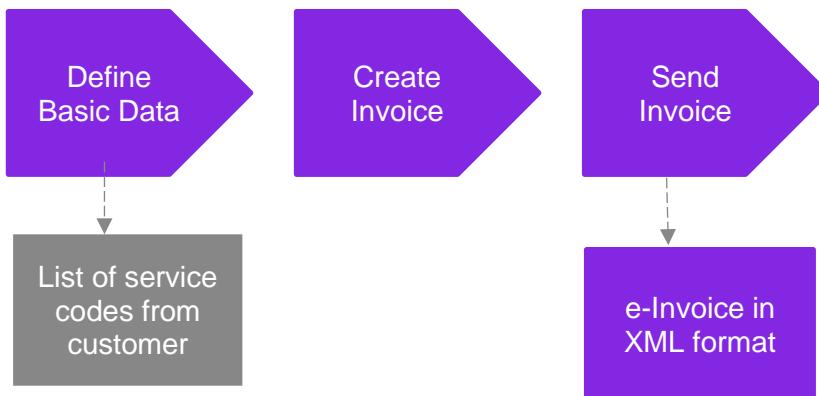

Example:

The process for customer order invoice:

The process for Project Invoice and Instant Invoice:

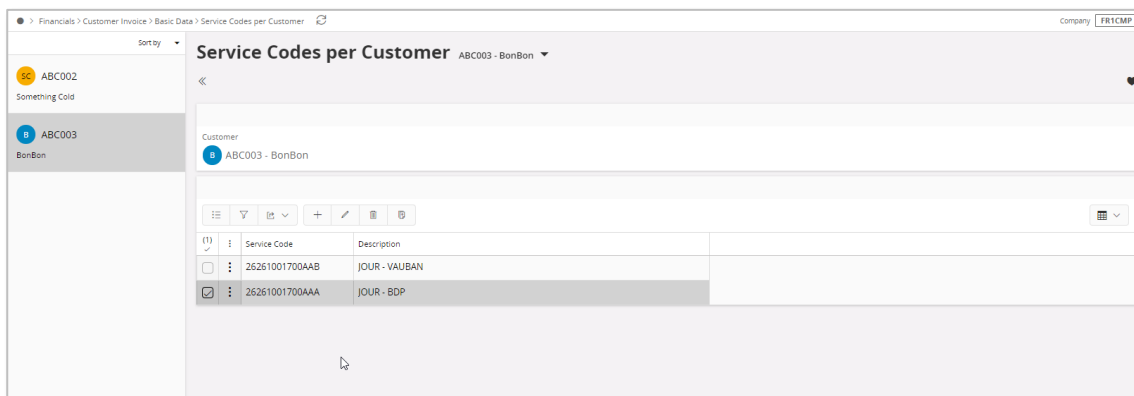

5.3 Prerequisites

The company must be set-up to use the French localization - see the Company Set up chapter - and the Service Code Handling localization functionality must be enabled on the *Company/Localization Control Center* tab.

5.4 Define Basic Data

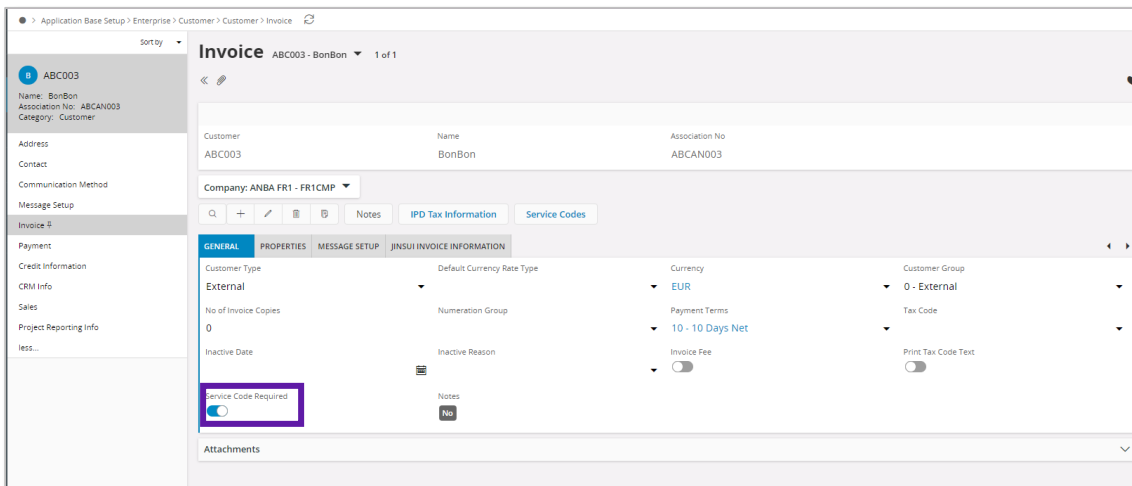

5.4.1 DEFINE SERVICE CODE PER CUSTOMER

Define the service codes for public customers in the *Service Codes per Customer* page. The public customers provide this information.

5.4.2 SELECT SERVICE CODE REQUIRED FOR PUBLIC CUSTOMER

If the customer is a public entity, service code is mandatory. Select the **Service Code Required** check box on the *Customer/Invoice/General* tab. From this page you can use the command **Service Code** to get to the *Service Code per Customer* page and enter the codes for this customer.

5.4.3 SPECIFY ADDRESS ON CUSTOMER

New receiver address GETXML_FR is added to the customer to identify the French schema used for generating the .XML invoice file. For public customer in France, set the *Customer/Message Setup* tab as follow:

Message Class = INVOIC, Media Code = E-INVOIC, Address = E-INVOICE_FR

5.5 Create Invoice

Create customer invoices, instant invoices and project invoices using the standard process. If the invoice is for a public customer, use the **List of Values** to select relevant service code connected to the customer.

The **Service Code** field is added to the following pages:

- *Customer Invoice/General* tab
- *Instant Invoice*, use command **More Information**
- *Project Invoice/General* tab.
- *Customer Order*

6 Audit File for Tax Purposes - FEC

6.1 Overview Legal Requirement

All French companies are required to provide the French Tax Administration (FTA) with a Standard Audit File for Tax (SAF-T) called Fichiers des Ecritures Comptables (FEC) on demand, usually before a tax audit. The file is required to contain all accounting entries for a year according to French GAAP, numbered in chronological order by date of accounting with no gaps, including year opening journals related to balances and journals related to all modules (AR, AP, Expense, Fixed Assets, Inventory, Payroll, GL, etc.). The first accounting line entries must always be the opening balance.

Compulsory information to be included in the file is defined by Article L 47 A 1 and the "code des procedures fiscales". There is a total of 18 data elements to be produced.

The audit file must be remitted to tax inspector in a specific format. The procedural rules for submitting audit file to the tax authorities are as follows:

- Technical: the files should be saved in CSV or XML format and remitted to tax authorities on optical disks like CD-R/DVD-R (non-rewritable), finalized version.
- Content: XML file should be generated according to the XSD file structure published by the French Tax Authority.

6.2 Process Overview

Standard audit file generation flow is used in the solution.

In this solution, it has only been considered generating the audit file according to XML format and solution is only considered the XSD file structure related to general business type (A47A-I-VII-1.xsd format file).

6.3 Prerequisites
