1 Company Set-up

1.1 Overview

In order to utilize the Spanish functionality, the company must be set up as using the Spain localization. This is defined in the page *Company*.

1.2 Define Localization

- Open the *Company* page.
- Search for the company.
- Select “Spain” from the drop-down list in the **Localization** field. Note that this cannot be changed once transactions are created for the company.

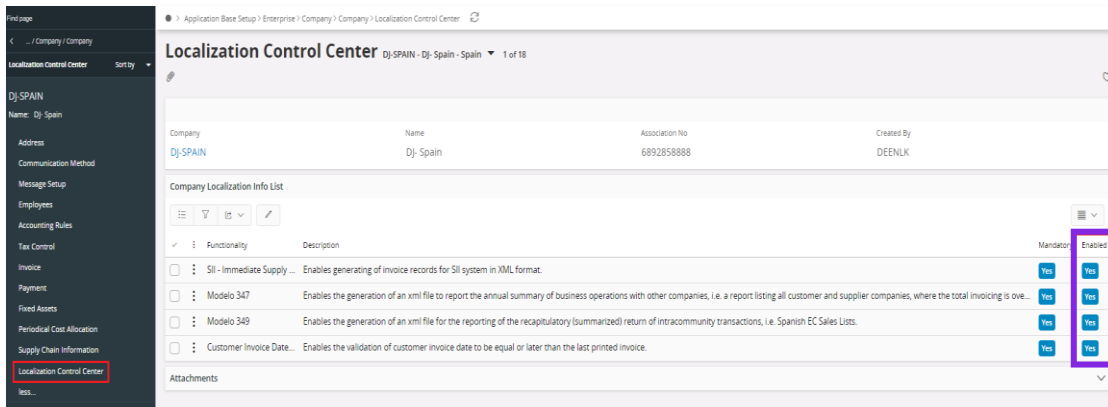

The screenshot shows the 'Company' configuration page in IFS. The breadcrumb trail is 'Application Base Setup > Enterprise > Company > Company'. The page title is 'Company DJ-SPAIN - DJ- Spain 1 of 18'. There are three buttons: 'Update Company', 'Update Company Translation', and 'New Company'. Below the buttons is a table with columns: Company, Name, Association No, and Created By. The row shows 'DJ-SPAIN', 'DJ- Spain', '6892858888', and 'DEENLK'. The main content area is divided into two panels: 'General Information' and 'Miscellaneous Information'. In 'General Information', 'Default Language' is 'English', 'Country' is 'SPAIN', 'Localization' is 'Spain', 'Form of Business' is '14/10/2019', 'Source Company' is 'STD-ES', and 'Master Company for Group Consolidation' is 'No'. In 'Miscellaneous Information', 'Document Logotype' is 'Right', 'Document Recipient Address Positioning' is 'Right', 'Print Document Senders Address' is a toggle switch, 'Authorization ID' is 'None', 'Authorization ID Expiration Date' is empty, and 'Identifier Reference' is empty. There is an 'Attachments' section at the bottom.

1.3 Select Localization functionality

Specify which functionality to use.

- Navigate to **Localization Control Center** sub-page under Company.
- All functionality available for Spain is presented in the list. Enable/Disable the non-mandatory functionality based on the requirements of the company via the toggle buttons under the **Enabled** column.

The screenshot shows the 'Localization Control Center' interface for company 'DJ-SPAIN'. It displays a table of localization information with columns for 'Functionality', 'Description', 'Mandatory', and 'Enabled'. The 'Enabled' column contains toggle buttons that are currently set to 'Yes'.

Functionality	Description	Mandatory	Enabled
<input type="checkbox"/>	SII - Immediate Supply ...	Yes	Yes
<input type="checkbox"/>	Modelo 347	Yes	Yes
<input type="checkbox"/>	Modelo 349	Yes	Yes
<input type="checkbox"/>	Customer Invoice Date...	Yes	Yes

2 Spanish Tax Reporting Modelo 349

2.1 Overview Legal Requirement

Modelo 349 Summary Statement of Intra-Community Transactions is a required Spanish tax report defined in the Tax Order HAC/360/2002 dated on 19th February 2002.

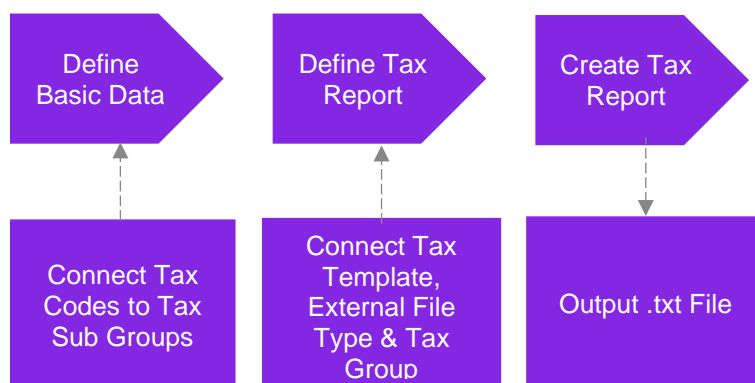

Modelo 349 summary statement is an obligatory tax report to be submitted to the tax authorities by Spanish companies who supply or purchase goods to or from any EU country.

The tax report must be structured and grouped according to operation keys as below:

- (A) Intra community acquisition subject to tax.
- (E) Intra community deliveries exempt
- (H) Intra community supply following an exempt Import (Legal Represent.)
- (I) Intra community Services delivery.
- (M) Intra community supply following and exempt Import.
- (S) Intra community supplies of services by the declaring.
- (T) Deliveries in other member states resulting from an exempt intra-community acquisition in the context of triangular operations.

The file must hold a sum for each tax identity and operation key.

2.2 Process Overview

2.3 Prerequisites

The company must be set-up to use Spanish localization, see the Company Set up chapter and the 'Modelo 349' parameter must be enabled.

In addition, the following must be set up:

- Company Communication Method must be defined in the company basic data.
- Tax ID for the customer and supplier must be defined.

Only transactions in the tax ledger will be subject to the report. Consequently, tax codes must be used accordingly. In order to handle the "Operation Key", the system-defined tax group must be used with different tax codes connected to each Operation Key (Sub Tax Groups).

2.4 Define Basic Data / Basic data changes introduced

2.4.1 Tax Template Modelo 349

A new tax template, *GES349: Modelo 349*, is introduced. This makes it possible to report tax based on the IFS Tax Ledger. In addition to this, the new external file type “TaxRepES349” and the new external file template “TaxRepES349” are introduced.

2.4.2 Tax Template Field Controls

The *Tax Template Field Control Basic* is introduced for the new tax template. The field control entered for the template will apply when selecting the fields to be used in a tax report based on the template.

Go to *Financials/Tax Ledger/Basic Data/Tax Templates* and for the template ID ‘GES349’ open the context menu and click **Field Control Basic Context**. Select **Details** to view *Template Field Details*.

Financials > Tax Ledger > Basic Data > Tax Templates > Tax Template Field Control Basic

Similarly, details must be defined for the field controls introduced.

2.4.3 Tax Group: Modelo 349

The tax reporting must be structured and grouped according to the local legislation for Modelo 349. The report is grouped based on operation keys. As per the Spanish tax legislation for Modelo 347, the tax transactions should be declared under operation keys as follows:

- (A) Intra community acquisition subject to tax.
- (E) Intra community deliveries exempt
- (H) Intra community supply following an exempt Import (Legal Represent.)
- (I) Intra community Services delivery.
- (M) Intra community supply following and exempt Import.
- (S) Intra community supplies of services by the declaring.
- (T) Deliveries in other member states resulting from an exempt intra-community acquisition in the context of triangular operations.

The file must hold a sum for each tax identity and operation key.

A new Tax Group ID: "MODELO: 349" is introduced to handle the operation keys. Open the *Tax Group* page via *Financials/Tax Ledger/Basic Data* to find this new tax group and the system defined sub groups A, E, H, I, M, S, and T.

Different tax codes can be connected under each sub group (Operation Key) via the *Sub Group Details* tab.

2.5 Define Tax Report

Follow the standard process to define a tax report and connect the tax template, “GES349: Modelo 349” and the tax group “Modelo 349” described in previous chapters. Output media should be file only.

These are the basics needed to define a Tax Report to facilitate the Modelo 349 tax report. Except for the tax template and the system define tax group, all the other information may be defined based on user requirements.

2.6 Create Tax Report

Once the tax report is defined as explained above, follow the standard process to create a Spanish Modelo 349 tax report. Read more in the IFS Cloud Documentation if needed.

In Spanish Modelo 349, the tax reporting is done by uploading a file with tax transactions. Printing a *Definitive Report* will create a .txt file that will contain the legally required information.

2.6.1 Correction invoices

In case when correction invoice is registered for an invoice which was already reported in the previous period, then we create additional correction rows (in Spanish “registro de rectificaciones”) in the 349 text file.

In IFS Cloud a corrections invoice is detected by:

- Check box **Correction Invoice** selected on customer or supplier invoice type present on invoice header. This check box is also copied to the invoice header and tax transaction.
- Reference invoice series and number filled on invoice header. This is also copied to tax transactions.

When a correction invoice refers to an invoice that was already reported in the previous period then additional correction rows are created in 349 TXT file with two new fields containing new tax base amount including the correction invoice and old tax base amount from the original invoice. These fields are in positions 153..165 and 166..178 in the text file.

2.7 Delimitations

N/A

3 Spanish Tax Reporting Modelo 347

3.1 Overview Legal Requirement

Form 347 tax report is a legal requirement in Spain under RD 1065/2007 dated 27th July 2007.

As per the Spanish tax legislation, the tax transactions should be grouped based on operation keys as below:

- “A”: Purchases
- “B”: Sales
- “C”: Mediations;
- “D”: Non-business purchases by public bodies correction;
- “E”: Grants or Subsidies;
- “F”: Travel agencies sales;
- “G”: Travel agencies purchases.

3.2 Process Overview

3.3 Prerequisites

The company must be set-up to use Spanish localization, see the Company Set up chapter and the “Spanish Tax Reporting Modelo 347” parameter must be enabled.

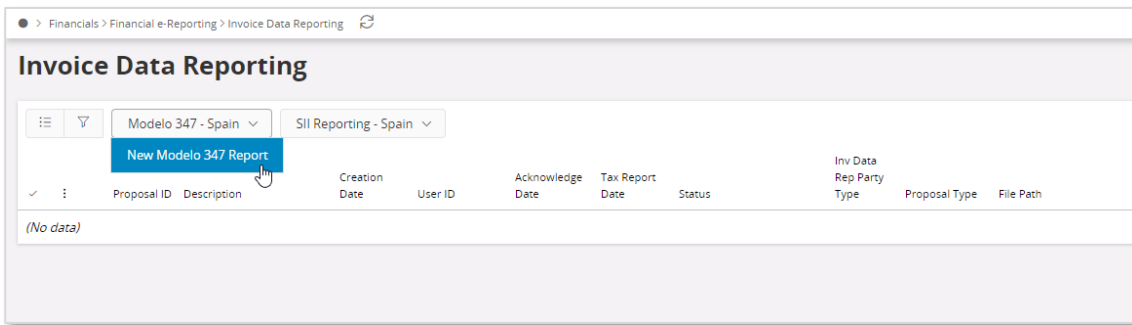

All invoices that should be reported under Modelo 347 must be in any of the posted statuses. A default communication method needs to be set up for the company and the Document Tax Information must also be set up for each Customer and Supplier that have been used.

3.4 Enter Basic Data

A phone number to the reporting company is required in the report file and this information is taken from the *Company/Communication Methods* page. Therefore, make sure that **Communication Method** “Phone” has been defined. It is the default per method phone number that will be used in the report file.

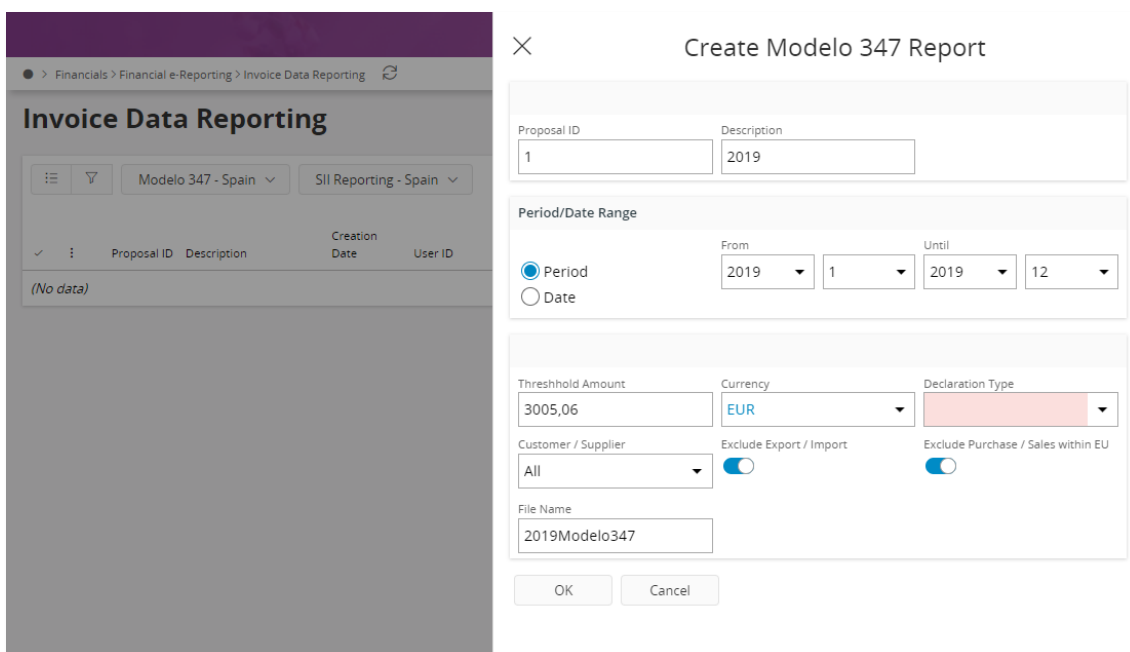

3.5 Create Report Proposal

Modelo 347 is reported from the *Financials/Financial e-Reporting/Invoice Data Reporting* page. Select the command “New Modelo 347 – Spain” to create a new proposal.

Specify the following details in the dialog to complete the proposal:

- **Period/Date Range.** Select the Period/Date you want to create the report for.
- **Threshold Amount.** The minimum amount of accumulated invoices per customer/supplier for the report. Default value is 3005,06 (based on Spanish regulations and reporting in EUR) but this is editable.
- **Currency.** Select which currency to report, e.g., invoices in the specified currency will be included.
- **Declaration Type:** From the drop-down option you can select Declaration type. When the report is created for the first time keep this field empty. When there are correction transactions to be included select whether the report created is "Complementary" or "Substitute". The option selected will be visible in the file created.
- **Customer/Supplier** - Select whether the report is to be created for "Supplier" "Customer" or "All".
- **Exclude Non EU Export/Import** - If selected, customers/suppliers belonging to non-EU member countries are excluded in the report.
- **Exclude Purchase /Sales within EU** - If selected, Customers/suppliers belonging to EU member countries are excluded from the selection/report.
- **File Name** – Text file name for the Spanish -Modelo 347 tax reporting file. The file will be saved to the default download folder of the browser.

3.6 Modelo 347 Details

Once the proposal is created, select the details command to see the proposal details. From this page, you can see the invoice information fetched for tax reporting. Make sure to review the **Operation Key** for accuracy.

3.6.1 Operation Key

As per the Spanish tax legislation for Modelo 347, the tax transactions should be grouped according to operation keys as follows:

- “A” marks purchases and “B” sales and is automatically set based on the Supplier and Customer party type.
- The other Operation Keys are marking special transactions and can be changed manually for each invoice:
 - “C”: Mediations;
 - “D”: Non-business purchases by public bodies correction;
 - “E”: Grants or Subsidies;
 - “F”: Travel agencies sales;
 - “G”: Travel agencies purchases.

3.7 Acknowledge Proposal

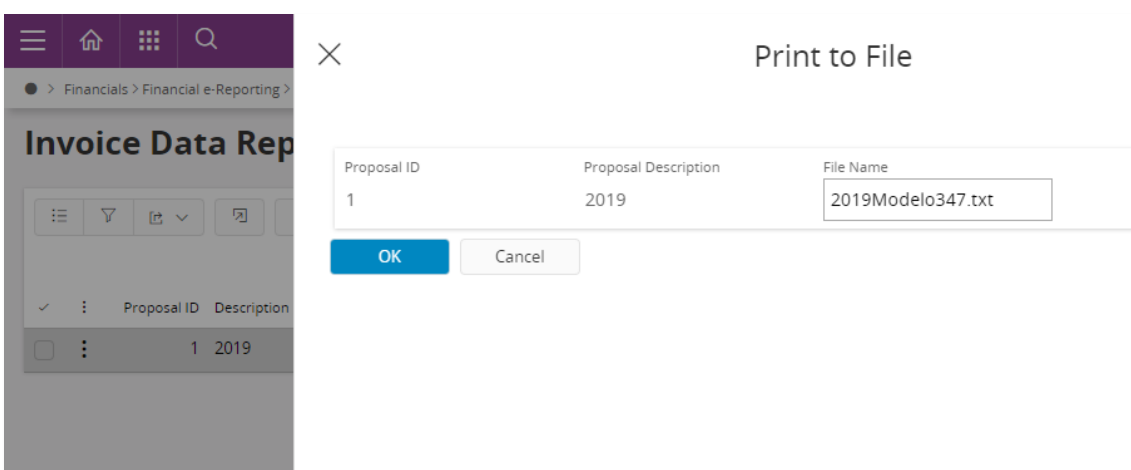

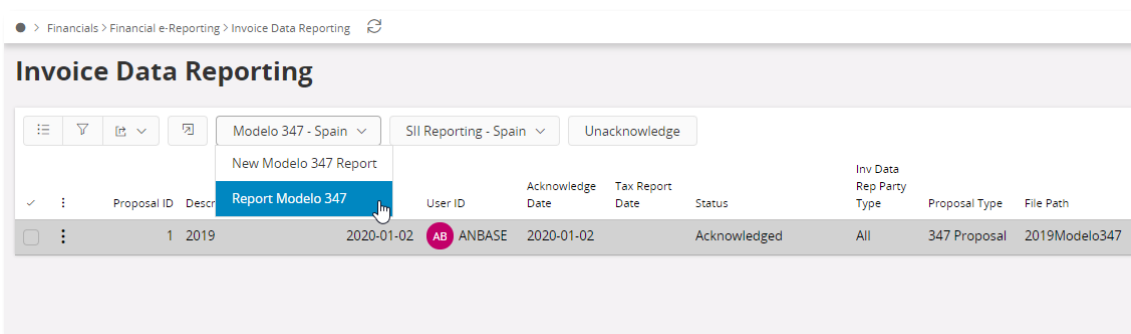

Once all necessary amendments are done to the tax reporting information via the *Modelo 347 Details* page, the tax proposal can be acknowledged. This is done by selecting the **Acknowledge** command from the *Invoice Data Reporting* page.

3.8 Create Tax Report (File)

Once the tax proposal is acknowledged the final step is to create the report (create the file). This is done by selecting the command **Report Modelo 347** in the *Invoice Data Reporting* page. This will open a dialog box. A file path defined in the Create Modelo 347- Spanish Tax Reporting dialog box is suggested. Once generated, text file can be overwritten or another text file name can be provided if necessary.

In addition, the **Print Preliminary Report** option can be used to create a preliminary report before the final output and this option can be also used to reprint the file reported via **Report Modelo 347**.

Once the tax report/file is created, the tax proposal status is set to "Reported". It will still be possible to view the details or **Print to File**.

3.9 Delimitations

N/A

4 Invoice Date and Number Control

4.1 Overview Legal Requirement

According to Spanish legislation, the customer invoice numbers within a series must be sequential and follow the invoice date in chronological order. This means that it is not allowed to set the customer invoice date at convenience. The numeration of customer invoices must follow a chronological order.

4.2 Process Overview

4.3 Prerequisites

The company must be set-up to use Spanish localization, see the Company Set up chapter and the “Invoice Date and Number Control” localization functionality must be enabled.

4.4 Printing, sending, e-mailing customer invoices

When any of the pages below are used to print, send, or email customer invoices, the invoice date and number control validation is made. An error message will be displayed on the page if the validation fails. If invoices are printed as a background job, then a warning will be displayed in the Background Job.

Application Page	Can process multiple invoices (Yes / No)	Pop-up error / Warning in background job	Comments
Instant Invoice	No	Error message displayed	
Print Invoice	Yes	Warning in Background Job	
Customer Invoice	No	Error message displayed	
Print Customer Invoices	Yes	Warning in Background Job	
Batch Print Customer Invoices	Yes	Warning in Background Job	
Project Invoice	No	Error message displayed	Release invoice
Project Invoices	Yes	Error message displayed	Release invoice
Batch Invoice (Project)	Yes	Warning in Background Job / Error in Batch Invoice Results	Release invoice

When processing multiple invoices, if there are one or more invoices that fail the validation, IFS Cloud will process the invoices that comply with the validation.

When the invoices are printed, sent, and emailed automatically (Customer order flow), IFS Cloud will raise the error message during the automatic flow.

4.5 Delimitations

N/A

5 SII Reporting

5.1 Overview Legal Requirement

The Tax Agency in Spain has introduced a new VAT management system based on Immediate Supply of Information (SII). This means that all issued and received invoices must be reported to the Tax Agency in XML format. It should be done within four calendar days from the time an invoice was issued or registered. It is mandatory from July 1st, 2017 for 63000 tax payers in Spain.

The invoice information from first half of 2017 should also be sent to the Tax Agency between July 1st and December 31st, 2017. In the future, no other tax reporting than SII reporting must be provided.

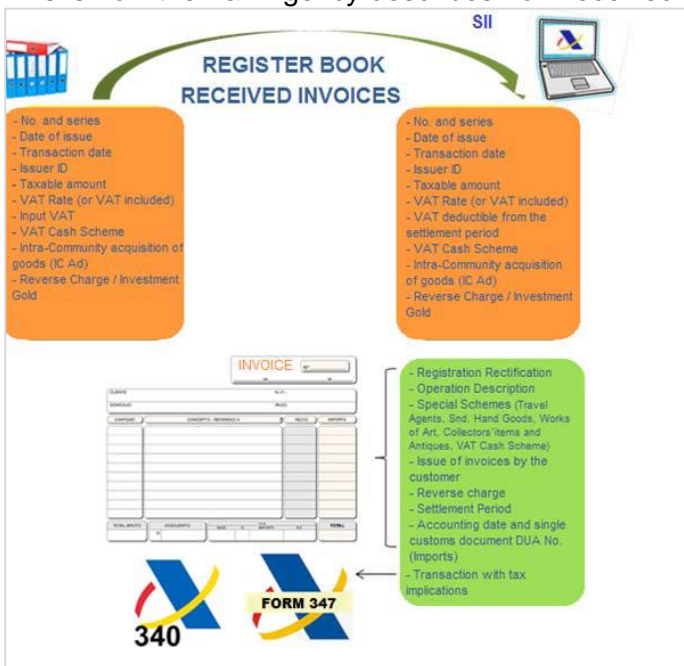

The Tax Agency provides the following web page for information about the SII reform:

http://www.agenciatributaria.es/AEAT.internet/en_gb/SII.html

This is how the Tax Agency describes how issued invoices are handled:

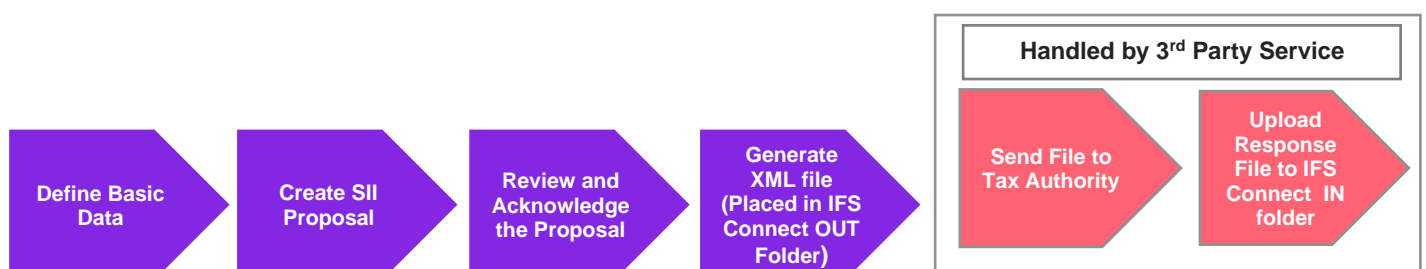

This is how the Tax Agency describes how received invoices are handled.

5.2 Solution Overview

- The following LCC parameter is introduced to support the requirement:
 - SII - Immediate Supply of Information
- Define Basic Data. Three new pages are available under the *Financials/Financial e-Reporting/SII Basic Data* folder.
 - *SII Exemption Reasons*. This page is used to enter the reasons for tax exemption.
 - *SII Invoice Types*. This page is used to enter types of invoices defined by the law.
 - *SII Business Transaction Types*. This page is used to enter the type of business transaction used on the invoice. It is defined separately for customer invoices and separately for supplier invoices.
- Create SII proposals for either supplier or customer invoices. Review and acknowledge the proposal.
- Generate XML file containing customer or supplier invoices from the proposal. The file is placed in IFS Connect Out Folder
- Use a 3rd party service provider to send the file to the tax agency and to upload the response file to IFS Connect in Folder
- The response file is automatically read, and the invoice status is updated

5.3 Process Overview

5.4 Prerequisites

The company must be set-up to use the Spanish localization, see the Company Set-Up chapter and the “SII - Immediate Supply of Information” functionality must be enabled.

Invoices must be posted, updated to the general ledger, and fetched to the tax ledger to be included in the SII reporting.

Check that different **Invoice Number Series** are used for “Instant Invoice”- and “Instant Invoice Correction” **Invoice Type**. (*Customer Invoice Type* page)

5.5 Define Basic Data

5.5.1 SII Basic Data

Three new pages are available under the *Financials/Financial e-Reporting/SII Basic Data* folder. The following pages are available:

- *SII Exemption Reasons*. This page is used to enter the reasons for tax exemption. It includes the following columns:
 - **SII Exemption Reason**: Code to be used in XML file.
 - **Description**: Description of the article applicable for the exemption.
- *SII Invoice Types*. This page is used to enter types of invoices defined by the law. It contains the following columns:
 - **SII Invoice Type**: Code to be used in XML file. Codes F1 and F6 are used for debit invoices, and codes R1..R5 are used for credit or correction invoices.
 - **Description**: Description of the invoice type – article of the law.
- *SII Business Transaction Types*. This page is used to enter the type of business transaction used on the invoice. It is defined separately for customer invoices and separately for supplier invoices. It contains the following columns:
 - **SII Business Transaction Type**: Code to be used in XML file.
 - **Description**: Describe the business transaction used on the invoice.
 - **Party Type**: Defines whether a given code is to be used on customer or supplier invoice.

Default values will automatically be added from the company template “STD-ES”.

On each tab, there is the **Translation** command available which allows to translate English descriptions to Spanish or other languages if needed.

<input type="checkbox"/>	R3	Corrected Invoice (Art. 80.4)
<input type="checkbox"/>	R4	Corrected Invoice (Other)
<input type="checkbox"/>	R5	Corrected Invoice in simplified invoices

5.5.2 Define Invoice Series

A new column, **SII Invoice Type**, is added to the *Financials/Customer Invoice/Basic Data/Invoice Series* page.

This is used to connect SII invoice types to invoice series. The list of values and validation for the new column refer to *SII Invoice Types* basic data described earlier. The codes starting with the letter “F” are used on debit invoices. The codes starting with the letter “R” are used on credit or correction invoices.

Invoice Series

<input type="checkbox"/>	Series ID	Description	Voucher Type	Max No of Char for Payment Reference	Fixed Length of Invoice No	Payment Method for Creation of Paym Ref	Tax Invoice	Separate Tax Invoice	SII Invoice Type
<input type="checkbox"/>	AC	Advance Customer Order Credit Invoice					No	No	F1
<input type="checkbox"/>	AD	Advance Customer Order Debit Invoice					No	No	
<input type="checkbox"/>	AS	Automatic Supplier Invoice					No	No	
<input type="checkbox"/>	CD	Customer Order Invoice, Debit					No	No	F1
<input type="checkbox"/>	CF	Customer Difference Item					No	No	F1
<input type="checkbox"/>	CI	Manual Customer Invoice					No	No	F1
<input type="checkbox"/>	CR	Customer Order Invoice, Credit					No	No	R1
<input checked="" type="checkbox"/>	EX	External Customer Invoice					No	No	
<input checked="" type="checkbox"/>	II	Instant Customer Invoice					No	No	F1
<input type="checkbox"/>	IR	Customer Interest Invoice					No	No	

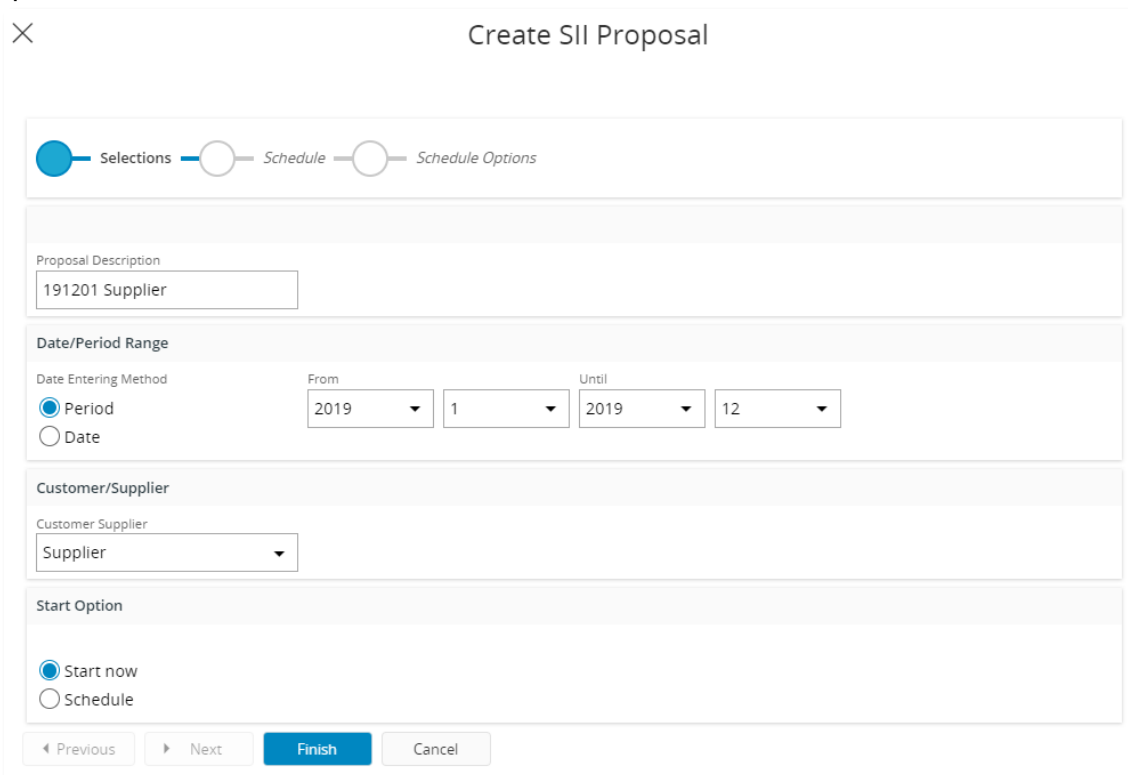

5.5.3 Define Tax Codes

A new sub-page is added to the *Accounting Rules/Tax/Tax Codes* page. Select the tax codes that you would like to update and click the command “SII Details”:

- **SII Exemption Reason:** It is used for <CausaExencion> tag in XML files that are specified as SII exemption reasons, see above. It can only be specified on the tax code having a tax percentage equal to 0. To report NonVATable operations, tax codes having tax type “Tax”,

Select the command **Create SII proposal** to create a new proposal. The following dialog is then opened.

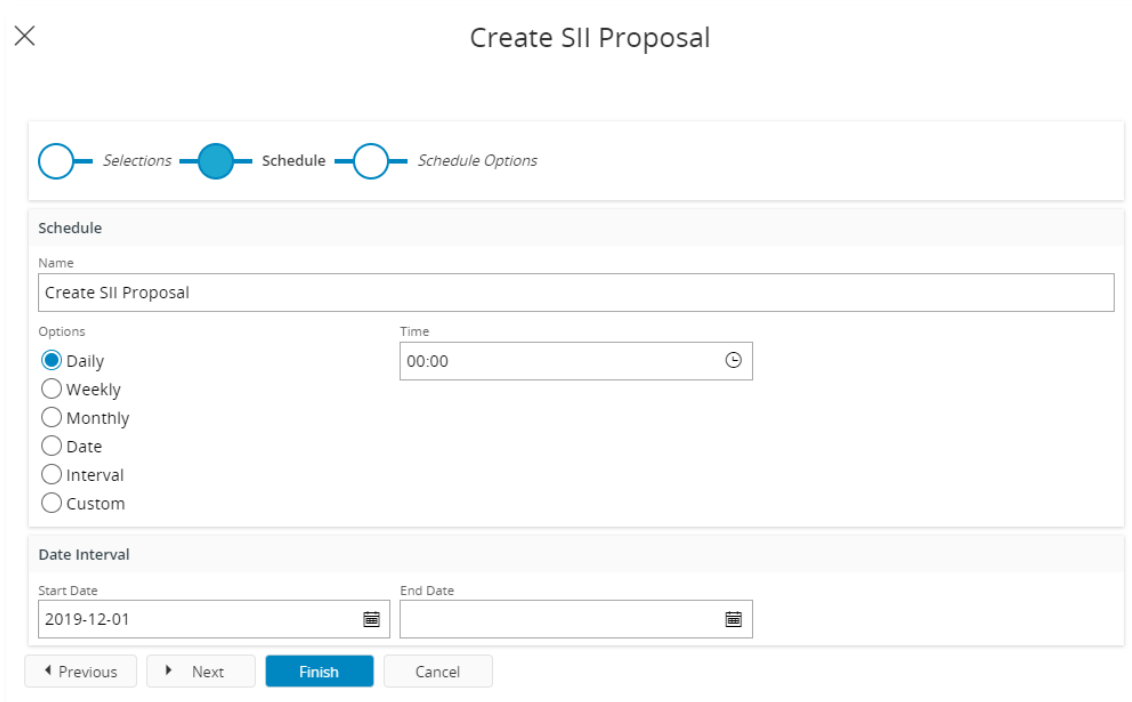

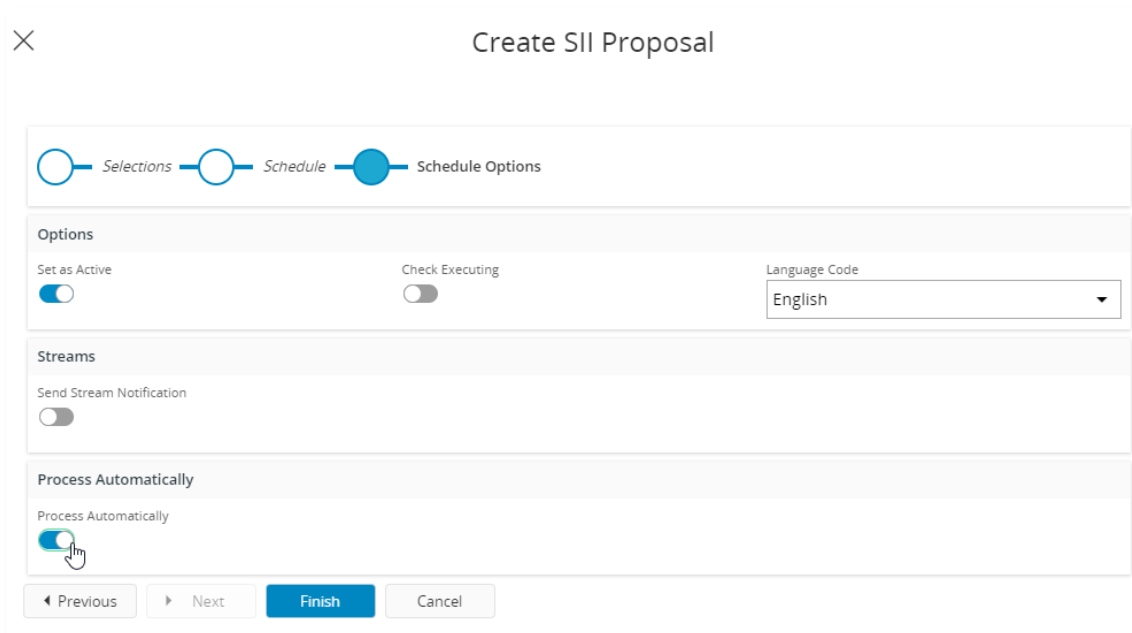

Add a description to the proposal, set a range for which invoices to be included, and select if the proposal should include customer or supplier invoices. The invoice must meet the following criteria to be included in the proposal:

- Invoice is posted
- Invoice voucher is transferred to GL
- Fetch Tax Ledger Info should be performed
- Invoice Voucher Date is within a specified date or period range
- The tax code used has the tax type “Tax”
- The invoice is not included in other proposal of type “SII Proposal” in this company.

5.6.1 Schedule task for SII proposal creation

Select **Schedule** and click **Next** in the *Create SII Proposal* assistant to define the rules and settings for the automatic creation of SII proposals.

If the **Process Automatically** switch is turned on. Then the proposal will be acknowledged, and the XML-file automatically created once the proposal is created.

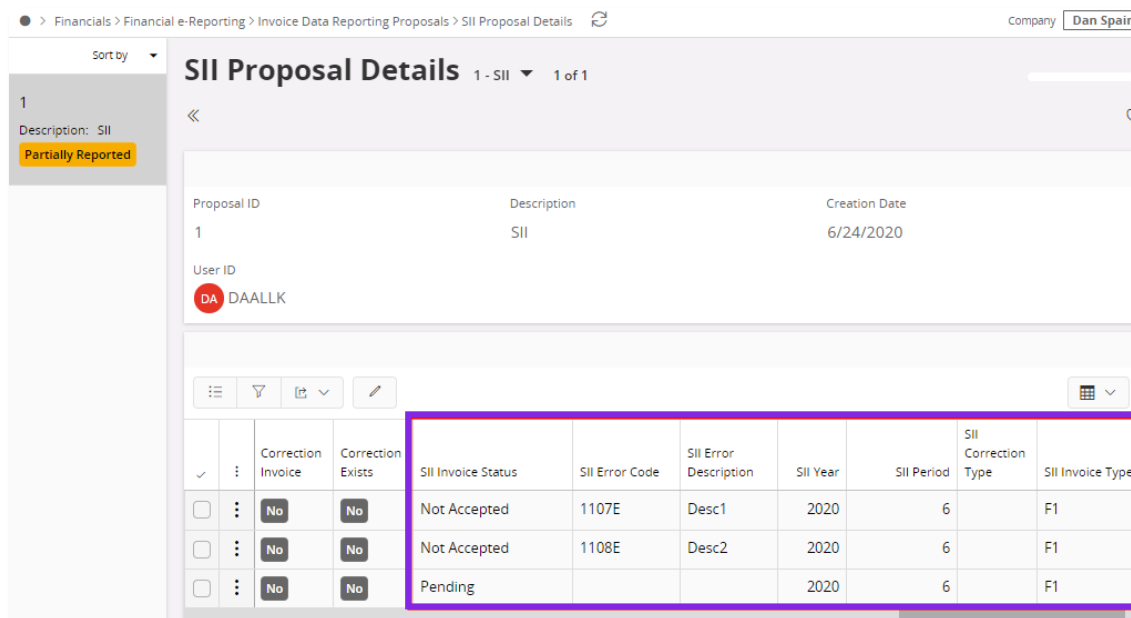

If there are errors, then the error message will be displayed in the background job. Correct the error and generate the XML manually from the proposal.

5.7 Review and acknowledge proposal

Use the command **Proposal Details** to view invoices included in the proposal. The *SII Proposal Details* page is opened with the details of the proposal.

In the header part of the page, you can see the following fields: **Proposal ID, Description, Creation Date, User ID, Proposal Status.**

In the detail part of the page you can see basic information about the invoice such as invoice number, invoice date, gross amount, net amount, tax amount, and others. We can also see information specific to SII reporting displayed in the: **SII Invoice Status, SII Error Code, SII Error Description, SII Year, SII Period, SII Correction Type** columns.

SII Invoice Status	SII Error Code	SII Error Description	SII Year	SII Period	SII Correction Type	SII Invoice Type
Not Accepted	1107E	Desc1	2020	6		F1
Not Accepted	1108E	Desc2	2020	6		F1
Pending			2020	6		F1

The **SII Invoice Status, SII Error Code, SII Error Description** columns are set automatically when the response file is uploaded and are not editable.

The **SII Year, SII Period** columns are set automatically based on the tax liability date of the invoice. They are not editable.

The **SII Correction Type** column is a combo box with two values: “S”, “I”. It is automatically set to “S” for correction invoices. It is automatically set to “I” for credit invoices created from customer order flow with invoice types CUSTORDCRE, CUSTCOLCRE. For other credit invoices and for credit supplier invoices user should set the value manually to “I”.

The SII correction type is only possible to edit manually when the proposal is in status “Created” and SII Invoice Status is equal to “Not accepted” or “Accepted with errors”.

It is possible to remove invoices from the SII proposal when the proposal status is “Created”. It is also possible to remove the whole proposal and create it again.

5.7.1 SII Invoice Status

The **SII Invoice Status** columns indicate the status of the invoice with the SII perspective. The following statuses are used:

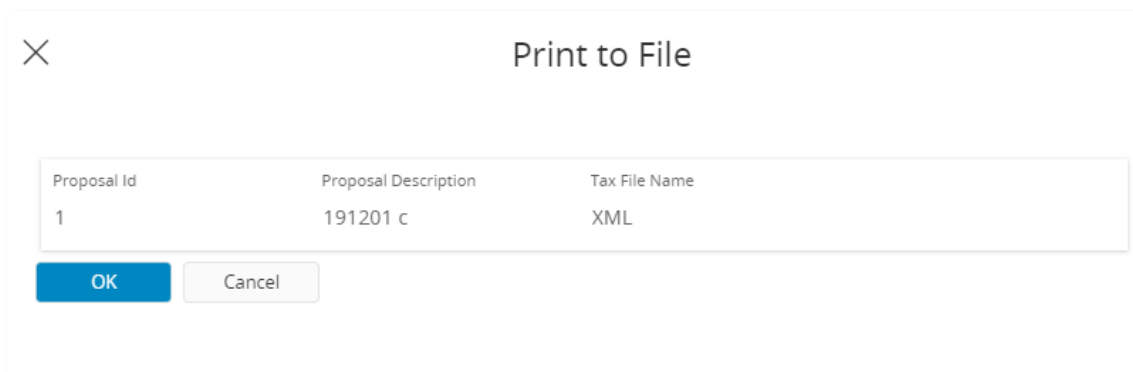

- “Pending” is set when the invoice is included in the proposal.
- “Not accepted” corresponding to “Incorrecto” in response file
- “Accepted with errors” corresponding to “AceptadoConErrores” in response file
- “Accepted” corresponding to “Correcto” in response file

See below for all possible statuses and transitions:

5.8 Generate XML File

When the proposal is acknowledged, select the command **Generate XML File**. The dialog below will be displayed.

Proposal Id	Proposal Description	Tax File Name
1	191201 c	XML

OK Cancel

10,000 invoices can be included in one XML file. If there are more invoices a separate file will be created per each 10 000. Communication type in tag **<TipoComunicacion>** informs SII web service whether new invoice is reported (A0) or it is an amendment for invoice reported earlier (A1). It will be set to A0 for the first XML file generated for the proposal.

The file will be created in the outgoing folder defined in IFS Connect setup. Read more about IFS Connect in IFS Cloud technical documentation.

5.8.1 Reporting of no-tax operations

NonVATable customer operations (invoice amounts) are reported in SII XML file in three relevant **<NoSujeta>** sections:

1. Section for **Spanish customer: goods or services**, grouped by Exemption Reason (under the respective tag, depending on exemption reason)
2. Section for **foreign customer, services**, grouped by Exemption Reason (under the respective tag, depending on exemption reason)
3. Section for **foreign customer, goods**, grouped by Exemption Reason (under the respective tag, depending on exemption reason)

These kinds of operations are included in SII and reported in XML files only if the tax code used on customer invoice has tax type: "Tax", 0 percentage and SII exemption reason "N1", "N2", "N3" or "N4".

5.9 Send XML File to Tax Authority

The customer is responsible for sending the generated XML file to tax authorities.

The response file, received in XML format, which contains a status for each invoice reported can be uploaded into IFS Cloud. You can analyze an updated SII status and based on it, take required actions toward invoices contained in the SII.

5.10 Upload Response File to IFS Cloud

The response file received from SII web service must be uploaded to IFS Cloud. This is done by placing the file in the IN folder defined in IFS Connect setup. Read more about IFS Connect in IFS Cloud technical documentation.

The file is read automatically and the SII invoice status, error code, and description is set for each invoice included in the proposal. Possible values for the SII invoice status are:

- "Accepted", in Spanish "Correcto"
- "Accepted with errors", in Spanish "AceptadoConErrores"
- "Not accepted", in Spanish "Incorrecto".

5.10.1 SII Proposal Status

The SII proposal status will be changed from "Acknowledged" to "Reported" or "Partially Reported" when the response file is uploaded to the application. When all invoices in the proposal receive the status "Accepted" then the status of the proposal is changed to "Reported". If there are invoices in the status "Not accepted" or "Accepted with errors" then the status of the proposal is set to "Partially Reported".

Note:

In fetching the supplier details not only the company and tax id number parameters will be validated, but the response received for the supplier when uploaded to the IFS Cloud, will be validated based on the Company, Tax ID Number, Invoice Number and Invoice Date.

Limitation: Following scenario will not be supported

More than one supplier is defined with the same Tax ID Number, and if more than one invoice with the same invoice date for these different suppliers exist.

5.11 Handle Errors

In case the SII proposal receives the status "Partially Reported" then there are invoices with the status "Not accepted" or "Accepted with errors". Change the basic data used by the not accepted invoices and generate a new XML file for the proposal. Invoices with status "Accepted" will not be included in the new file.

A separate XML file for invoices in the state "Accepted with errors" will be created with **Communication Type** "A1". Such invoices have present records in the SII database. This XML is to update that record with new data.

A separate XML file for invoices in the state “Not accepted” will be created with **Communication Type** “A0”. Such invoices do not have record in SII database.

5.11.1 Analysis page for errors in reporting

New page *SII Invoices with Errors* is created to present invoices with **SII Invoice Status** equal to “Not Accepted” or “Accepted with errors”.

Financials > Financial e-Reporting > SII Invoices With Errors company Dan Spain

SII Invoices With Errors

		Tax Amount In Acc Curr	Gross Amount In Acc Curr	Invoice Type	Correction Exists	Correction Invoice	SII Invoice Status	SII Error Code	SII Error Description	SII Year	SII Period

<input type="checkbox"/>	:	2520.00	14520.00	INSTINV	No	No	Not Accepted	1108E	Desc2	2020	6

5.12 Analysis

To help the user control that all invoices have been reported to SII. The columns **Included in SII Proposal** and **SII Invoice Status** are added to the *Customer Invoices Analysis* and *Supplier Invoice Analysis* pages (More Information tab). Please note that the columns might have to be added manually from the Table View Settings.

Financials > Customer Invoice > Analysis > Customer Invoices Analysis company anbase spain localization

5.13 Delimitations

Following message types will not be supported:

- Capital Assets Ledger
- Specific intra-Community transactions ledger
- Collections in Cash
- Insurance Activities
- Supply of collections for Invoice Issued
- Supply of payments for Invoice Received

Supplier invoice cancellation is not handled in the flow of SII reporting. If a record in SII database should be removed or updated (when a new supplier invoice is entered with the same number) then it should be done manually outside of IFS Cloud.

6 TicketBai Invoicing in Spain (Basque Region)

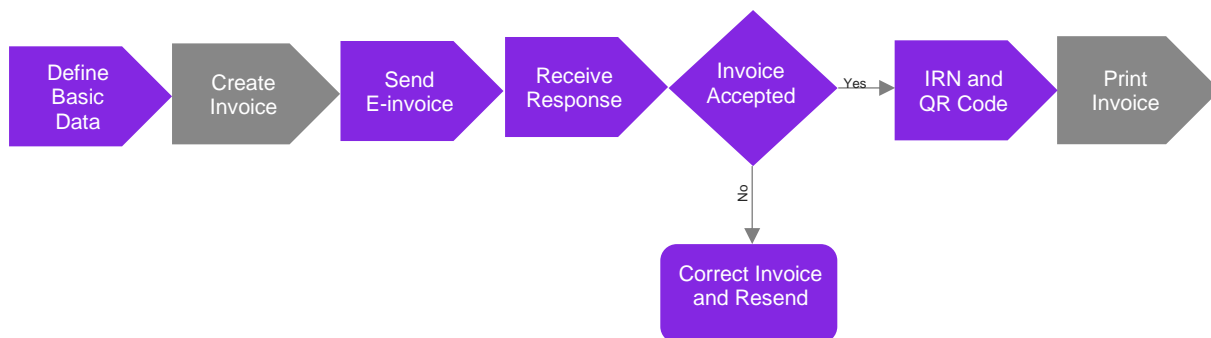

6.1 Overview of the Legal Requirement

TicketBAI is a shared project by the Regional (Provincial) Finance Authorities and the Basque Government to implement a series of legal and technical obligations regarding taxpayers' invoicing software. It will enable the tax authorities to monitor taxpayers' business income, particularly in sectors that deliver goods or perform services to end consumers that are largely paid for in cash. Two of the main goals of the Basque authorities are to assist taxpayers in fulfilling their fiscal obligations and to combat tax fraud, thus ensuring that everyone contributes to public spending according to their financial means. The TicketBAI project is one of the most innovative elements in the field of assistance and monitoring of taxpayers with businesses. It aims to ensure that all transactions conducted by individuals and organizations in business are properly declared and draws on the experience of other countries in the region.

All invoicing software used to implement TBAI requirements must follow the process detailed below each time an invoice is issued:

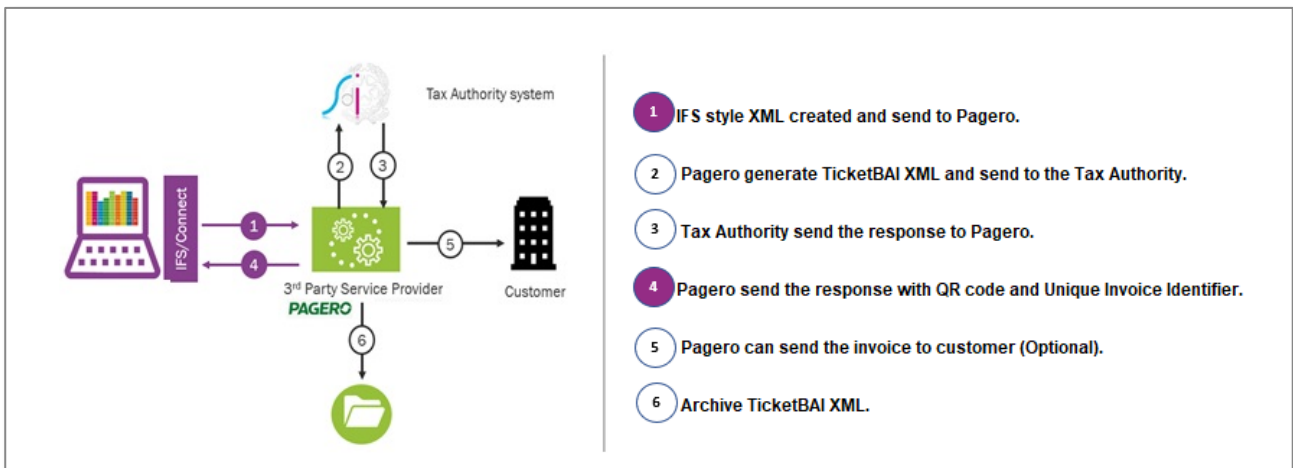

- An XML file must be generated that matches the design and content of the TBAI format schema. This file will be known as the TBAI file.
- The TBAI file must be electronically signed.
- The invoice image may be generated either physically or in electronic format. The invoice image must include QR Code and the Unique Invoice Identifier which is generated using the content of the signature of the TBAI file.
- The procedure **MUST** be in the following order: generation of the TBAI file; digital signing of the file; generation of the image on paper or in electronic format.

6.2 Process Overview

6.3 Solution Overview

The solution is based on IFS eInvoice which is using a 3rd party service provider to handle the communication of invoice information. The solution has been developed in cooperation with the IFS partner Pagero. The service provider is needed to transform the IFS style invoice file to the required format and to transform the response file to an IFS style format.

TicketBAI XML development is supported in all Live Invoices including Instant Invoices, Project Invoices, and Customer Order Invoice categories.

To fulfill these requirements of TicketBAI xml, the following tags are added to the IFS XML file.

TBAI Requirement	Mandatory/Optional	New tag introduced by IFS
Invoice Series	Optional	ESInvoiceSeries
Tax Point Date	Optional	ESTaxPointDate
Invoice Description	Mandatory	ESInvoiceDescription
ID Number	Conditional	ESIdNumber
Codes of VAT regime, codes, and taxable transactions	Mandatory	ESVatCode
VAT Withholding	Optional	ESVatWithholding
TAX Base at Cost	Optional	ESVatBaseAtCost
VAT Type	Mandatory	ESVaatType
VAT Exemption Reason Code	Conditional	ESVatExceptionReasonCode

6.4 Prerequisites

Following basic data set up needs to be done to enable the TicketBai Invoicing method.

The company must be set-up to use Spanish Localization, and both the **SII - Immediate Supply of Information** parameter and **Spanish e-invoice (TicketBAI)** parameter need to be enabled under the Localization Control Center.

Localization Control Center				
Company		Name	Association No	Created By
SWGSP		SWGSP	SWGSP	SASGLK
Localization				
Spain				
Functionality	Description	Mandato...	Enabled	
<input type="checkbox"/>	Spanish e-Invoice (Ticket BAI)	Enables the generation of the e-invoice XML file, include required data for sending Spanish Ticket BAI legal report to ta	No	Yes
<input type="checkbox"/>	Spanish Payment Format	Enables the use of the payment format NORMA43 (CSB43) - Bank to Customer Statement.	No	No
<input type="checkbox"/>	SII - Immediate Supply of Information	Enables generating of invoice records for SII system in XML format.	Yes	Yes
<input type="checkbox"/>	Modelo 111	Enables the generation of a txt file to report the withholdings and deposits on account on Income from work, econom	No	No

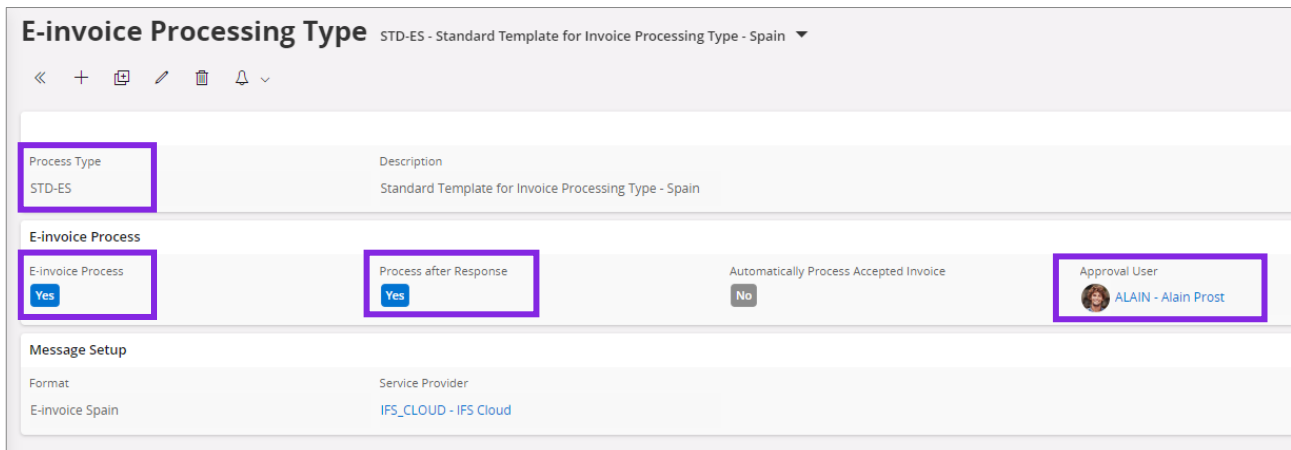

6.5 Basic Data Setup

Define the following basic data:

- Connect **Process Type** to Company and/or Customer Page.
- Routing rule and address for sending and receiving.

6.5.1 NEW PROCESS TYPE

New Process type STD-ES has been introduced to handle the compliance process facilitating the mandatory e-invoice process.

E-invoice Processing Type	
Process Type	STD-ES
Description	Standard Template for Invoice Processing Type - Spain
E-invoice Process	
E-invoice Process	Yes
Process after Response	Yes
Automatically Process Accepted Invoice	No
Approval User	ALAIN - Alain Prost
Message Setup	
Format	E-invoice Spain
Service Provider	IFS_CLOUD - IFS Cloud

A new process type could be defined by the user with the parameters set as below:

- E-invoice Process = Yes
- Process after Response = Yes
- Format = E-invoice Spain
- Approval User needs to be added.

Format E-invoice Spain is added to distinguish the Spanish XML schema used for the generation of invoice files sent to the Tax Authority with mandatory E-invoice tags of Spanish TBAI from the standard XML schema.

6.5.2 E-INVOICE SETUP

The user needs to connect the **Process Type** in the Company and/ or in the Customer page. Basic data set up in Company Page/ Invoice /General tab/Miscellaneous Parameters

6.6 Basic data setup for TBAI XML requirement

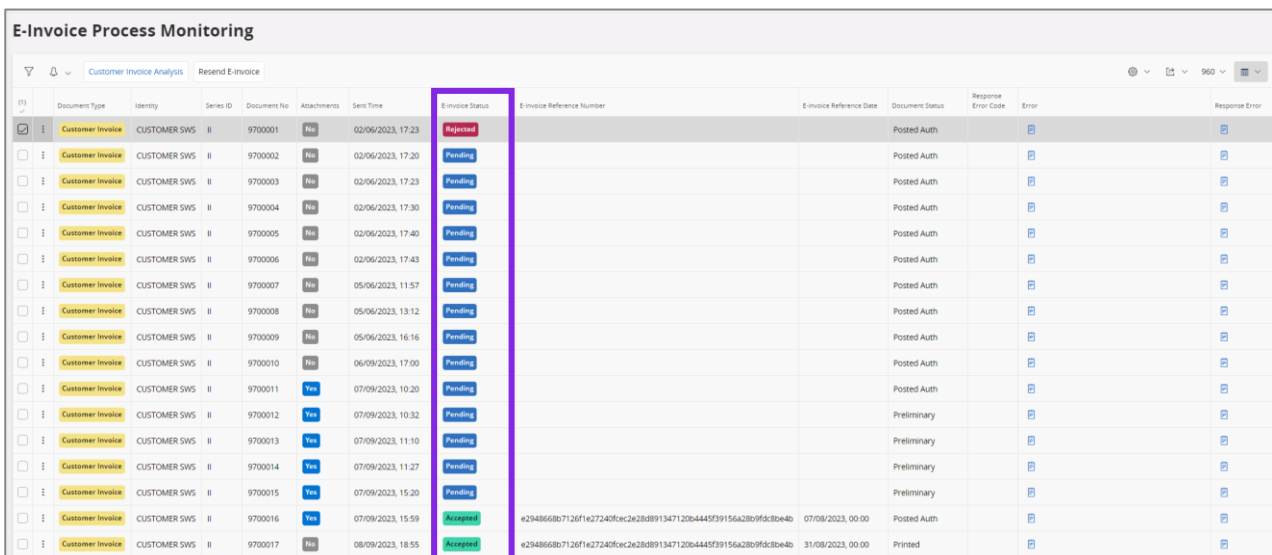

Define basic data as mentioned in the table to fulfill the requirement of TBAI XML.

TBAI Requirement	New tag introduced by IFS	Basic Data Setup
Invoice Series	ESInvoiceSeries	Invoice Series
Tax point Date	ESTaxPointDate	Same as Invoice Date
Invoice Description	ESInvoiceDescription	Define Invoice Text ID
ID Number	ESIdNumber	ID type (03,04,05) other than organization tax ID number (i.e., 02 - NIF or VAT Number) need to be define under Tax ID Types page based on the relevant country code. Then ID Type/Tax ID Type and the Number need to be defined under Document Tax Information tab in Customer Page. Any value related to this ID Type will be shown under “BuyerOrganizationTaxCode” tag in the xml. Following are the different ID types commonly use in Spain. 02: NIF or VAT Reg. Number (Main Tax ID Number) 03: Passport 04: Official ID document issued by country or territory of residence

		05: Residence certificate 06: Other identifying document
Codes of VAT regime, codes, and taxable transactions	ESVatCode	Tax Codes - SII Business Transaction Type Customer
VAT Withholding	ESVatWithholding	Customer Page - Withholding Taxes
TAX Base at Cost	ESVatBaseAtCost	Customer Page - Withholding Taxes
VAT Type	ESVAatType	Tax Codes - SII Tax Liability Classification - S1, S2, S3
VAT Exemption Reason Code	ESVatExceptionReasonCode	Tax Codes - SII Exemption Reason

6.7 TicketBAI Invoice Process

E-invoice Process Monitoring page has been introduced to monitor the invoices sent to authorities. This page will show the information on the invoice file sent to the Tax Authority and the response from Tax Authorities. Possible statuses of the response are **Pending**, **Accepted**, **Failed**, and **Rejected**.

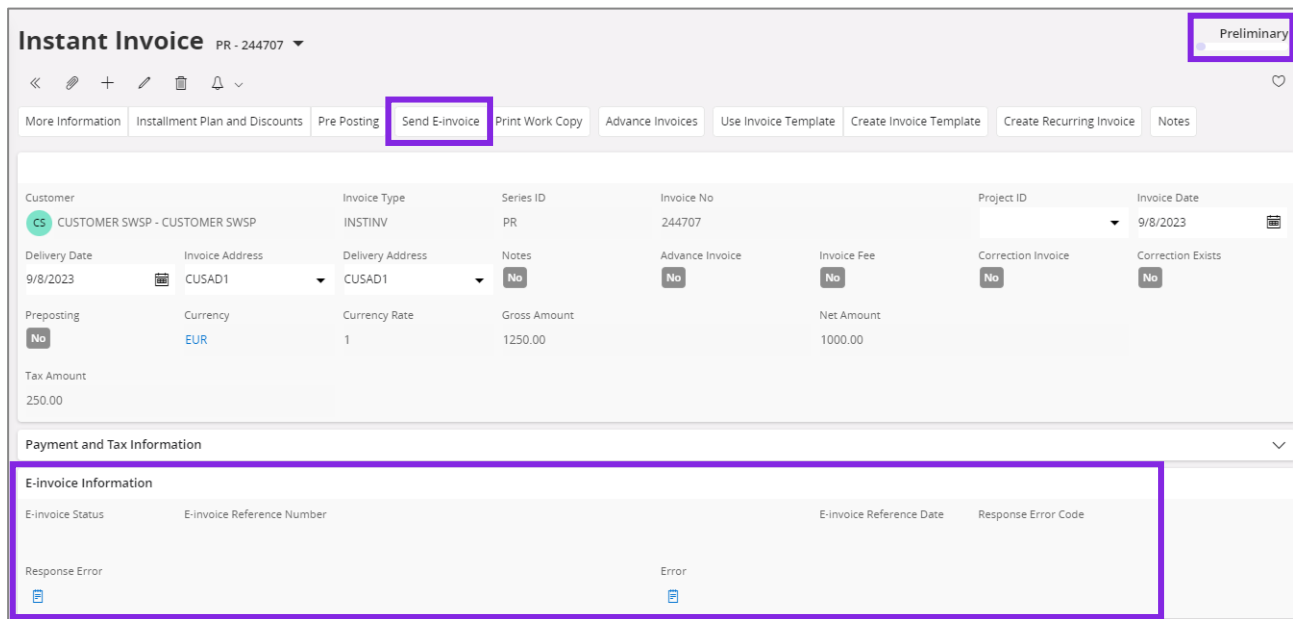

ITJ	Document Type	Identity	Series ID	Document No	Attachments	Sent Time	E-Invoice Status	E-Invoice Reference Number	E-Invoice Reference Date	Document Status	Response Error Code	Error	Response Error

E-invoice Information

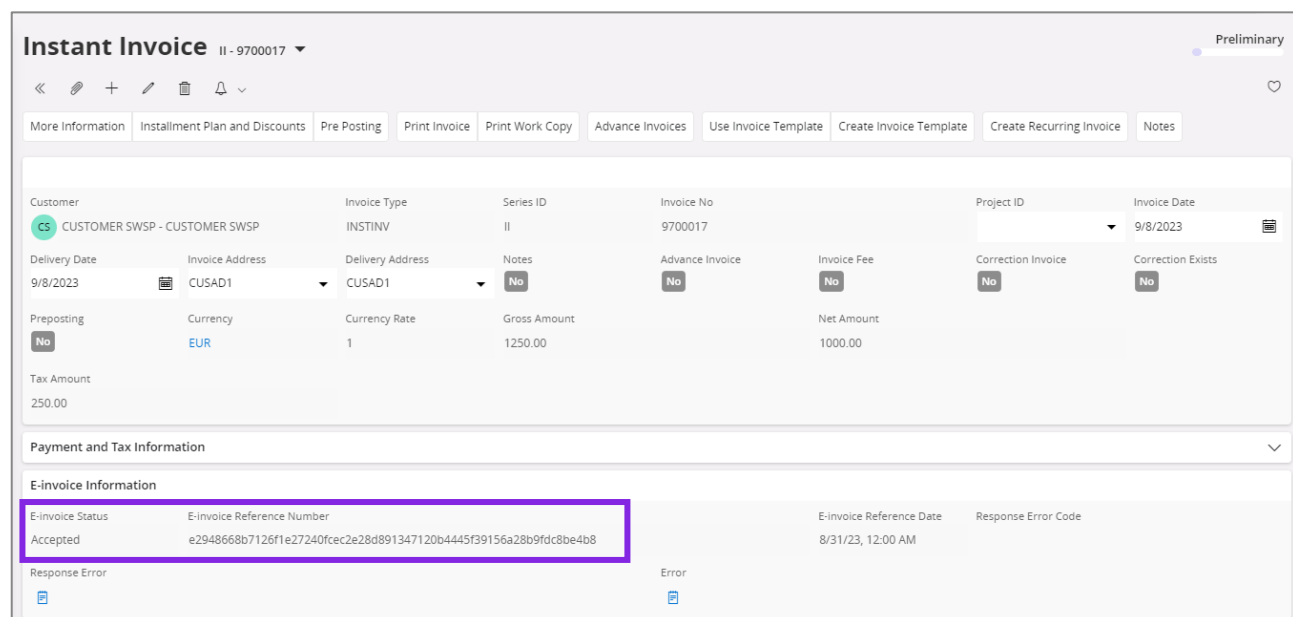

E-invoice Status	E-invoice Reference Number	E-invoice Reference Date	Response Error Code
Response Error		Error	

To send invoice XML to the authority, the user is required to select the **Send E-invoice** option.

A TBAI XML file in IFS style format is created and placed in IFS Connect out-folder which can be verified in the out-folder.

3rd party service provider validates the file, converts it to the required format, and transfers the file to Tax Authority.

Once the invoice XML is sent to the authorities, based on the status of the response the **E-invoice Information** sub section will be updated in the Invoice.

Accepted	e2948668b7126f1e27240fcec2e28d891347120b4445f39156a28b9fdc8be4b8	8/31/23, 12:00 AM	

If the option **Automatically Process Accepted Invoice** option enabled **Process Type** is connected, after receiving an accepted response the invoice will continue the ordinary flow and be printed and posted automatically.

Note: Please refer to the core documentation **E-invoice Process** (2.9.15.1) for more information since the Country specific E-invoice models have been handled as generic solutions in core.

6.7.3 UPLOADING RESPONSE FILE

Response File received from the 3rd party service provider should be uploaded to the IN Folder.

ReceiveEInvoiceResponseSampleACCEPTED

6.8 Update General Ledger

Follow the IFS Cloud core process to update voucher to General Ledger (Update GL Vouchers Assistant).

6.9 Fetch Tax Ledger Information

Follow the IFS Cloud core process to fetch tax ledger information (*Fetch Tax Ledger Information* Assistant).

6.10 Delimitations

Following invoice types will not be supported:

- Customer Self-Billing Invoices
- Out-Going Supplier Invoices

7 NORMA43 Payment Format

7.1 Overview of Business Requirements

Standard 43 is a banking standard that regulates and standardizes sending current account bank statements. It was developed by Spanish credit institutions through their respective associations, with the special participation of the Spanish Banking Association (AEB).

It is a file that has a defined structure where all the entries of a company's bank accounts are reflected over a given time interval.

Electronic account statements play an important role within companies' treasury departments. More specifically, Standard 43 facilitates more agile communication with financial institutions.

7.2 Solution

To meet the requirement for external payment creation, a new payment format and file template have been added.

Payment Format - **NORMA43 - Bank to Customer Statement (NORMA 43)**

File Template - **MXP_NORMA43**

7.2.1 Process Overview

7.2.2 Assumption

It's assumed that the user is familiar with the IFS Application's standard process of creating external payments.

7.3 Prerequisites

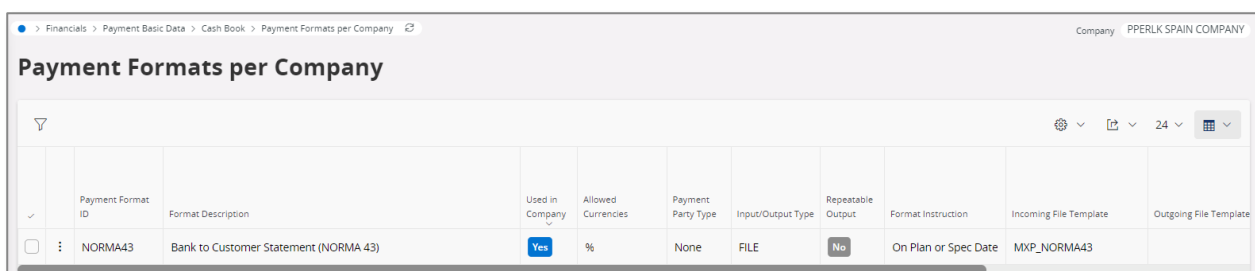

- The company must be set up to use **Spain** localization, see the Company Setup chapter.
- The **Spanish Payment Format** localization parameter must be enabled on the **Company/Localization Control Center** tab.

7.4 Define Basic Data

Setup of basic data is required to use the payment format in creating mixed payments without any errors.

7.4.1 Enable Norma43 Payment Format for the Company

Enable the NORMA43 payment format in **Financials/Payment Basic Data/Cash Book/Payment Formats per Company** page.

Payment Format ID	Format Description	Used in Company	Allowed Currencies	Payment Party Type	Input/Output Type	Repeatable Output	Format Instruction	Incoming File Template	Outgoing File Template
NORMA43	Bank to Customer Statement (NORMA 43)	Yes	%	None	FILE	No	On Plan or Spec Date	MXP_NORMA43	

Connect message codes to the above payment format by **Payment Formats per Company/ Payment Format/Message Codes**.

Financials > Payment Basic Data > Cash Book > Payment Formats per Company > Payment Formats

Payment Formats

Copy Payment Format

Payment Format ID	Format Description	Allowed Currencies	Party Type	Input/Output Type	Format Type	Support Payment File Traceability	Repeatable Output	Format Instruction	Incoming File Template
NORMA43	Bank to Customer Statement (NORMA 43)	%	None	File	Empty Format	No	No	On Plan or Spec Date	MPX_NORMA43

Financials > Payment Basic Data > Cash Book > Payment Formats per Company > Payment Formats > Payment Format Message Codes

Payment Format Message Codes

NORMA43 - * - Default issuer 1 of 1

Payment Format: NORMA43 - Bank to Customer Statement (NORMA 43) Issuer: * - Default issuer

Message Code Details

Message Code	Description	Transaction Type	Error Code	Payment Format Message Function
592	Cash transfer	Cash Transfer	No	
701	Direct Cash	Direct Cash Trans	No	
702	Direct Cash	Direct Cash Trans	No	

7.4.2 Create a Payment Method and Connect to the Payment Institute

Create a payment method connecting the above payment format in **Financials/Payment Basic Data/Cash Book/Payment Methods** page.

Financials > Payment Basic Data > Cash Book > Payment Methods

Payment Methods

Translation

Payment Method	Description	Format ID	Generate Trace Information	Cash Account In Any Currency
C	Cheque	CHECK - Cheque Payments	No	No
E	Cash	EMPTY - Empty format	No	No
G	Giro Cliente	LCRES - Cashing of Bills of Exchange, Spain	No	No
L	Bill Of Exchange	LCRES - Cashing of Bills of Exchange, Spain	No	No
<input checked="" type="checkbox"/>	NORMA43	NORMA43 - Bank to Customer Statement (NORMA 43)	No	No
P	Pagaré Proveedor	BOE - Bill Of Exchange Format	No	No
R	Recibo Cliente	LCRES - Cashing of Bills of Exchange, Spain	No	No
T	Transferencia	EMPTY - Empty format	No	No

Use the context menu option **Payment Methods per Institute** to define the payment method used for the relevant payment institute.

Financials > Payment Basic Data > Cash Book > Payment Institutes > Payment Methods per Institute

Company: PPERLK SPAIN COMPANY

Payment Methods per Institute

BANK - Bank 1 of 1

Payment Method	Bank Transaction Code	Output File Name
<input type="checkbox"/> C - Cheque	* - IFS Bank Transaction Code	C.DAT
<input type="checkbox"/> E - Cash	* - IFS Bank Transaction Code	E.DAT
<input type="checkbox"/> G - Giro Cliente	* - IFS Bank Transaction Code	G.DAT
<input type="checkbox"/> L - Bill Of Exchange	* - IFS Bank Transaction Code	L.DAT
<input checked="" type="checkbox"/> NORMA43 - NORMA43	* - IFS Bank Transaction Code	NORMA43.DAT
<input type="checkbox"/> P - Pagaré Proveedor	* - IFS Bank Transaction Code	P.DAT
<input type="checkbox"/> R - Recibo Cliente	* - IFS Bank Transaction Code	R.DAT
<input type="checkbox"/> T - Transferencia	* - IFS Bank Transaction Code	T.DAT

7.4.3 Company Cash Account

Go to **Financials/Payment Basic Data/Cash Book/Cash Account** to create the company cash account for the payment institute.

Account Number column character composition should be as follows:

Component	Bank Key	Office Code	Account Number	Total
Characters	4	4	10	18

Financials > Payment Basic Data > Cash Book > Cash Accounts

Company: PPERLK SPAIN COMPANY

Cash Accounts

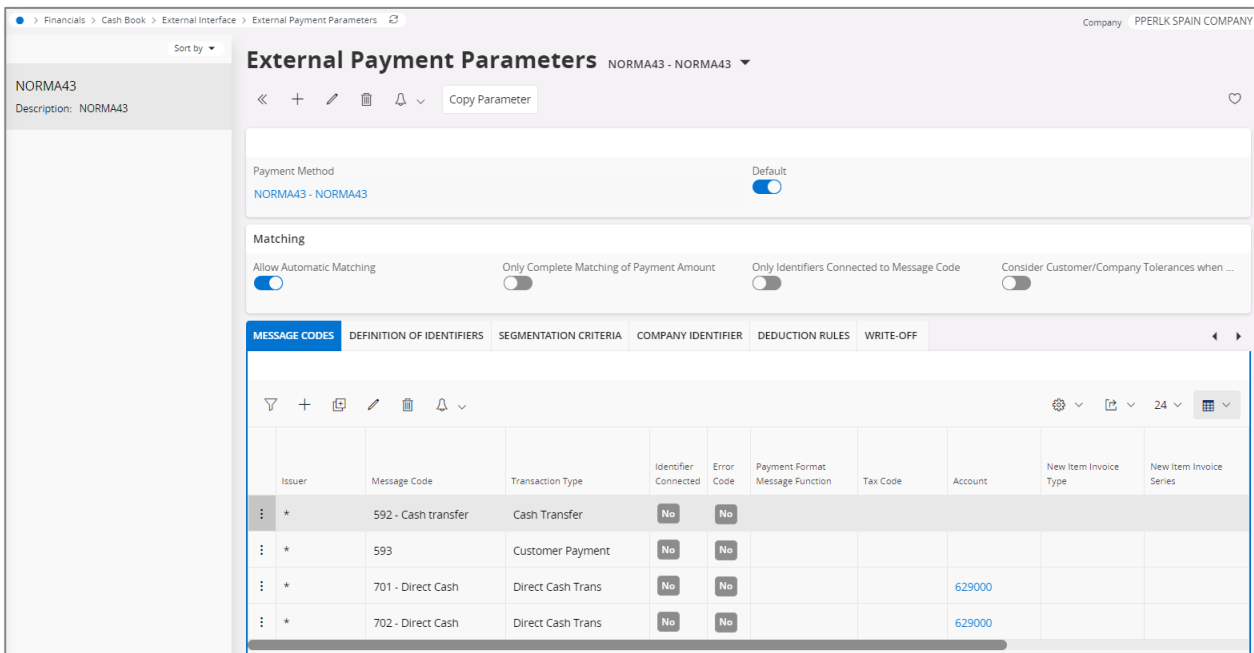

Transaction Types per Cash Account | Cash Accounts per Customer | Cash Account Text

Short Name	Description	Payment Institute	Currency	Account Number	Account Reference	BIC/Swift Code
<input checked="" type="checkbox"/> BANK ACCOUNT	Cash Account	BANK	EUR	210345000550000165		
<input type="checkbox"/> BANK_USD	BANK_USD	BANK	USD	210345000550000166		
<input type="checkbox"/> CASH	Cash box	CASH	EUR	0		
<input type="checkbox"/> CASHBOX	Cash Box	CASHBOX	EUR	123456		
<input type="checkbox"/> NET AP/AR	Netting AP/AR	CASH	EUR	0		

7.4.4 External Payment Parameters

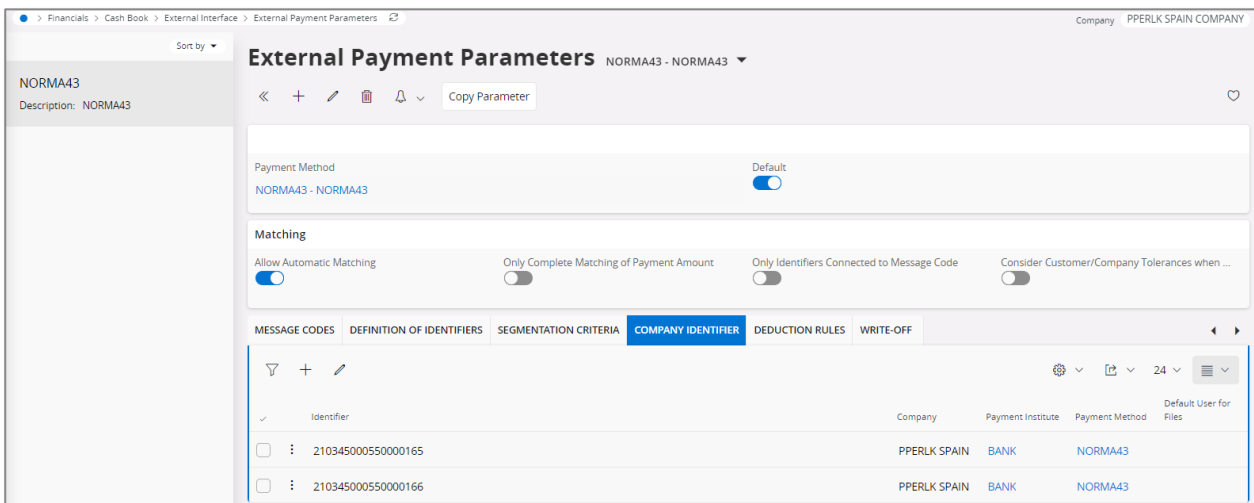

Go to **Financials/Cash Book/External Interface/External Payment Parameters** page. Create new external payment parameters for the above payment method.

Message codes defined in the Payment Formats Per Company will be available in the Message Codes tab. Users can modify the message codes which are stored in external payment parameters.

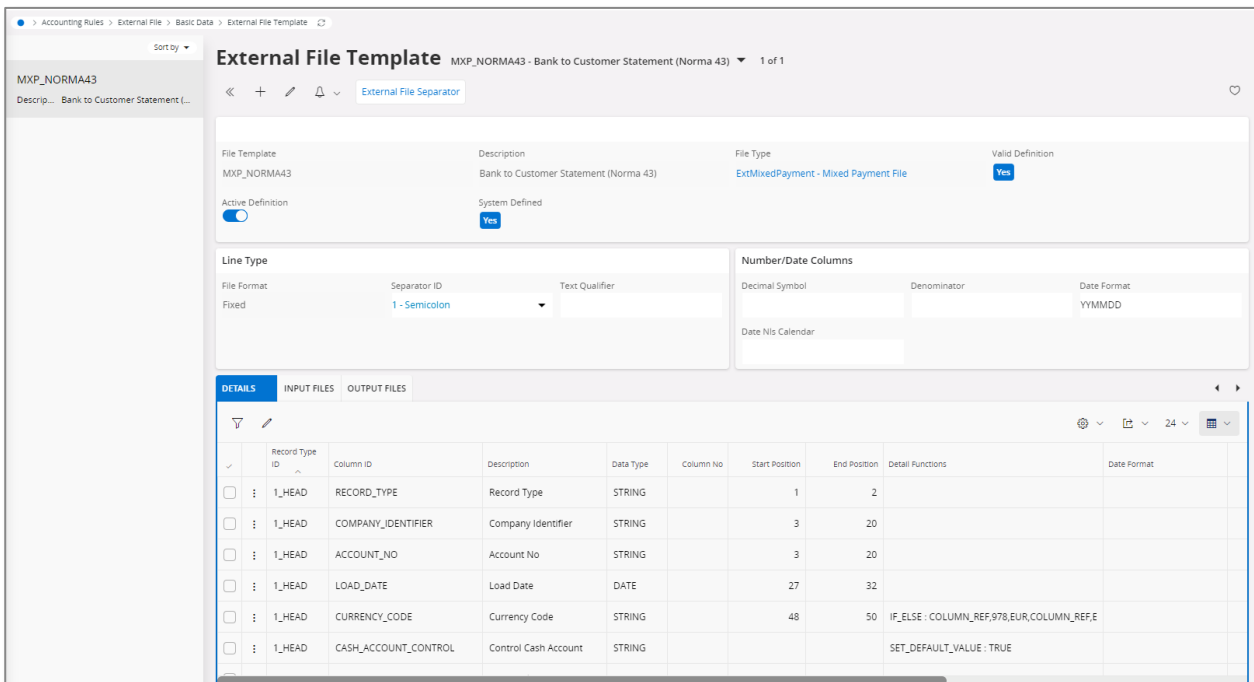

Enter identifier details by connecting the relevant information to the Company Identifiers tab of the External Payment Parameters. The payment methods of the identifiers must refer to the same payment format, which is linked to the payment method displayed at the top of the window.

The Account Number in the Cash Account window and the Company Identifier in the External Payment Parameters window should be the same values which consist of Bank Key, Office Code, and Account Number (18 characters).

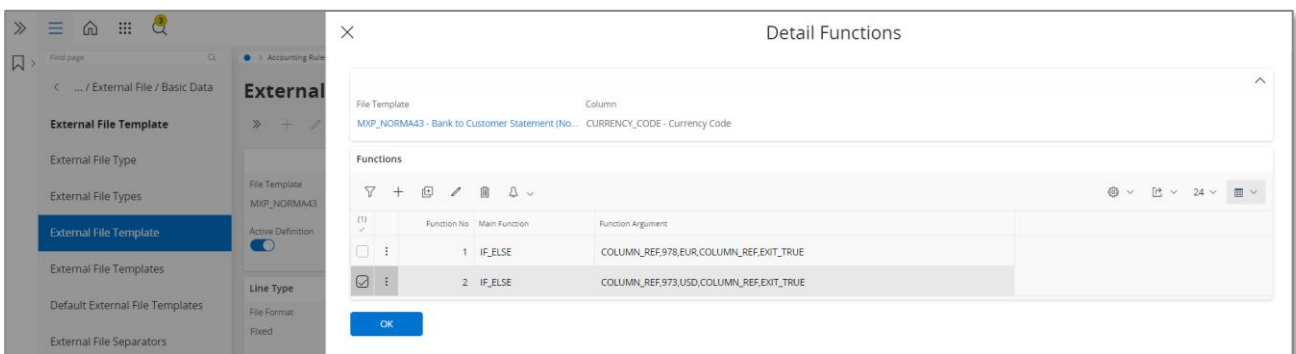

7.4.5 External File Template

Go to the **Accounting Rules/External files/Basic data/External File Template** page and query for the Template ID **MXP_NORMA43**. Users can modify the details functions of the Details section of the template.

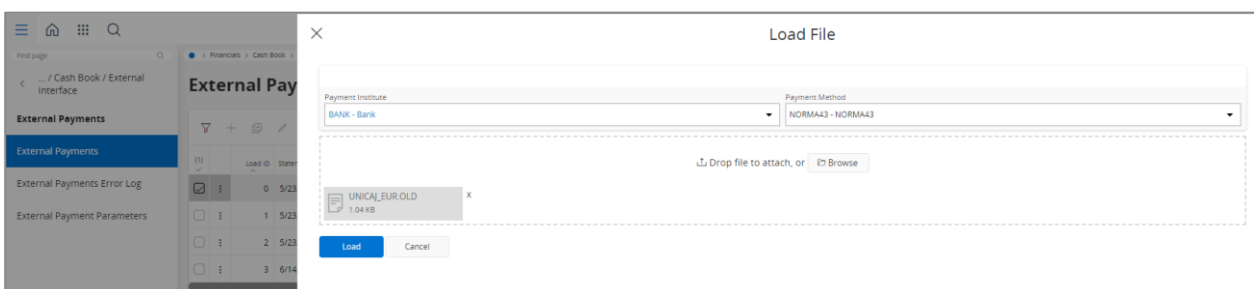

For instance, if the user is loading a file with a currency other than EUR, another line can be added to the existing details function as below (i.e., function No 2 by defining 973 as the currency code for USD).

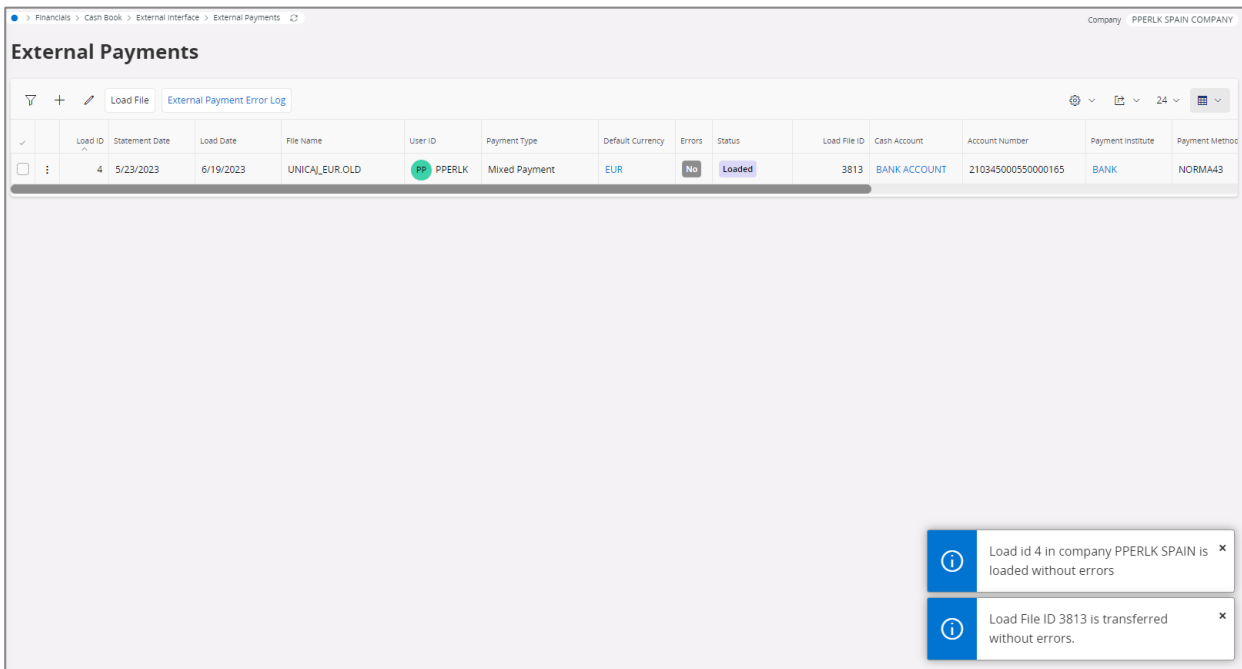

7.5 External Payment - Load File

Go to the **Financials/Cash Book/External Interface/External Payments** page to load payment files from a payment institute.

Upon loading the payment file, the following information messages will appear.

The screenshot shows the 'External Payments' window for company PPERLK SPAIN COMPANY. A table lists one payment entry with the following details:

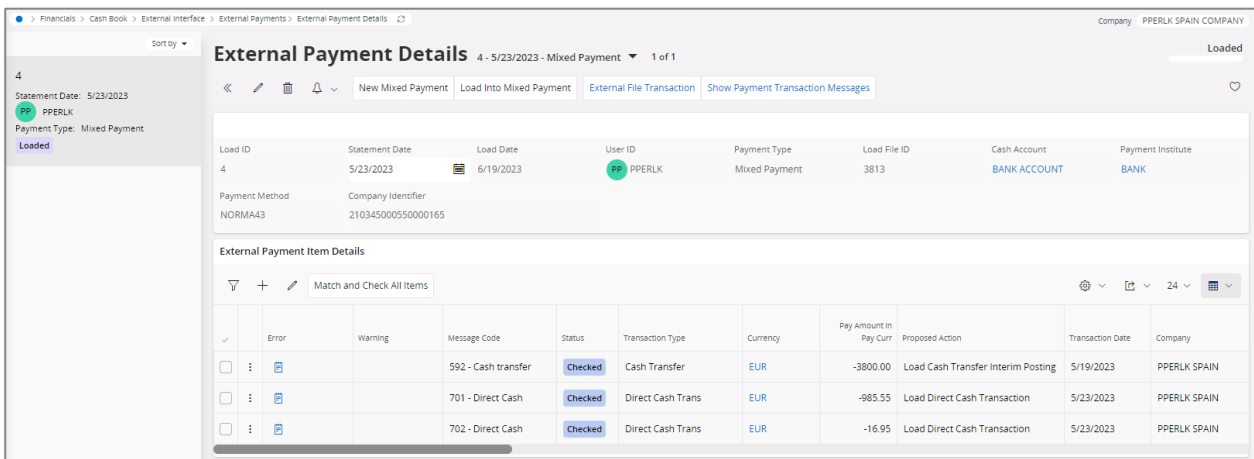

Load ID	Statement Date	Load Date	File Name	User ID	Payment Type	Default Currency	Errors	Status	Load File ID	Cash Account	Account Number	Payment Institute	Payment Method
4	5/23/2023	6/19/2023	UNICAJ_EUR_OLD	PPERLK	Mixed Payment	EUR	No	Loaded	3813	BANK ACCOUNT	210345000550000165	BANK	NORMA43

Two notification messages are displayed at the bottom right:

- Load id 4 in company PPERLK SPAIN is loaded without errors
- Load File ID 3813 is transferred without errors.

For payment formats that use an external file template that identifies the message code in the external file, the external payment detail lines can be created by using the parameters set on the message code.

Manual postings for a direct cash transaction loaded with a message code may include the account and tax code for the message code.

The screenshot shows the 'External Payment Details' window for company PPERLK SPAIN COMPANY, displaying details for Load ID 4. The main details are:

Load ID	Statement Date	Load Date	User ID	Payment Type	Load File ID	Cash Account	Payment Institute
4	5/23/2023	6/19/2023	PPERLK	Mixed Payment	3813	BANK ACCOUNT	BANK

Additional details include Payment Method: NORMA43 and Company Identifier: 210345000550000165.

The 'External Payment Item Details' table shows the following items:

Error	Warning	Message Code	Status	Transaction Type	Currency	Pay Amount in Pay Curt	Proposed Action	Transaction Date	Company
		592 - Cash transfer	Checked	Cash Transfer	EUR	-3800.00	Load Cash Transfer Interim Posting	5/19/2023	PPERLK SPAIN
		701 - Direct Cash	Checked	Direct Cash Trans	EUR	-985.55	Load Direct Cash Transaction	5/23/2023	PPERLK SPAIN
		702 - Direct Cash	Checked	Direct Cash Trans	EUR	-16.95	Load Direct Cash Transaction	5/23/2023	PPERLK SPAIN

7.6 Load Into or Create Mixed Payment

Users can either use the **Load into Mixed Payment** or **New Mixed Payment** options after the payment file is loaded to the External Payment window.

Financials > Cash Book > External Interface > External Payments

Company: PPERLK SPAIN COMPANY

External Payments

[Load File](#)
[External File Transaction](#)
[New Mixed Payment](#)
[Load Into Mixed Payment](#)
[External Payment Error Log](#)

7.8 Delimitations

None.

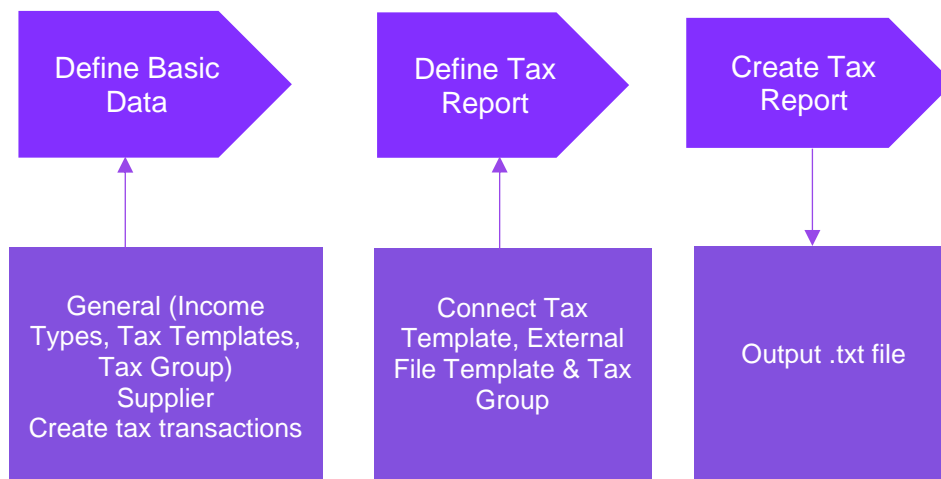

8 Spanish Withholding Tax Reporting Modelo 111

8.1 Overview Legal Requirement

This fiscal form has been mandatory since the 30th of March 2007. All persons and entities obliged to withhold or deposit on account under the provisions of article 74 of the Tax Regulations that satisfy or pay income, in cash or in kind, subject to withholding are obliged to present Modelo 111 to any of the following categories: Income from employment, income from economic activities, monetary prizes, forestry exploitation and transfer of image rights.

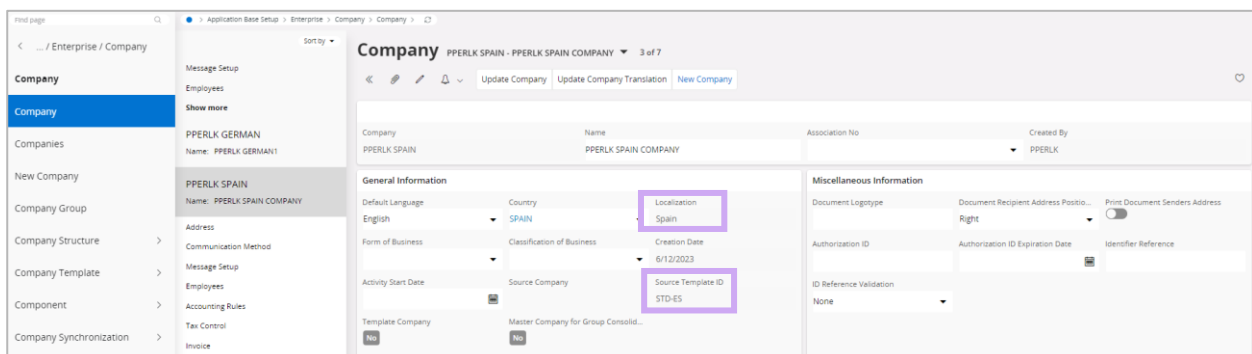

The periodicity (quarterly or monthly tax filing) and the form of presentation (submission electronically or by paper) of the self-assessments of withholdings and payments on account of the IRPF in Modelo 111 are determined by the type or category in which the taxpayer is included (i.e., large companies, public administrations with an annual budget of more than 6 million euros, Entities with the legal form of a public limited company or limited liability company, etc.)

8.2 Process Overview

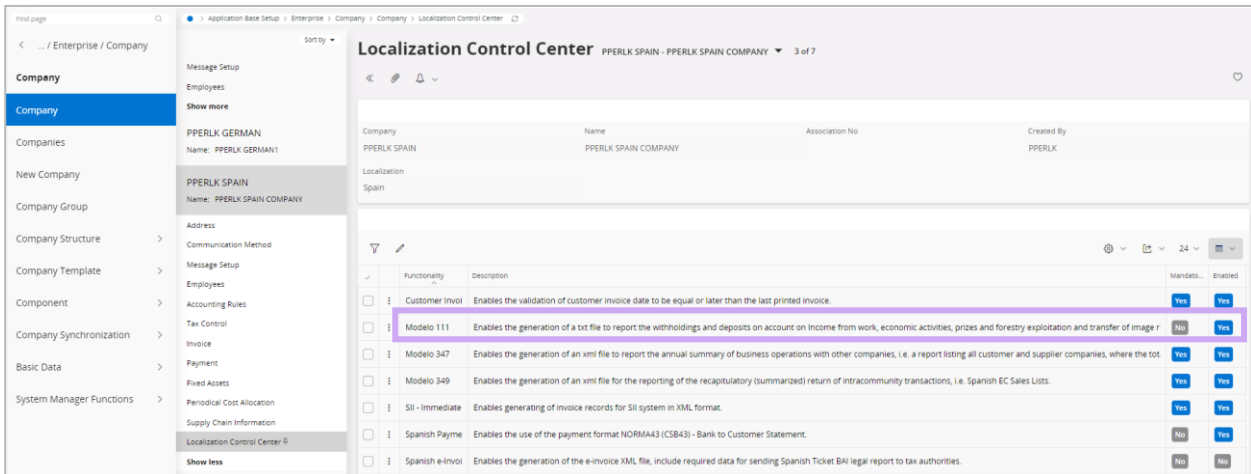

8.3 Prerequisites

The company must be set up to use **Spain** localization and Spain company template (**STD-ES**), see the Company Set up chapter and the **Modelo 111** functionality must be enabled in the Localization Control Center.

The screenshot shows the 'Company' setup page in the IFS system. The company name is 'PPERLK SPAIN'. The 'Localization' is set to 'Spain', and the 'Source Template ID' is 'STD-ES'. The 'Default Language' is 'English', and the 'Country' is 'SPAIN'. The 'Creation Date' is '6/12/2023'. The 'Form of Business' and 'Classification of Business' are also visible. The 'Miscellaneous Information' section includes 'Document Logotype', 'Document Recipient Address Position', and 'Print Document Senders Address'.

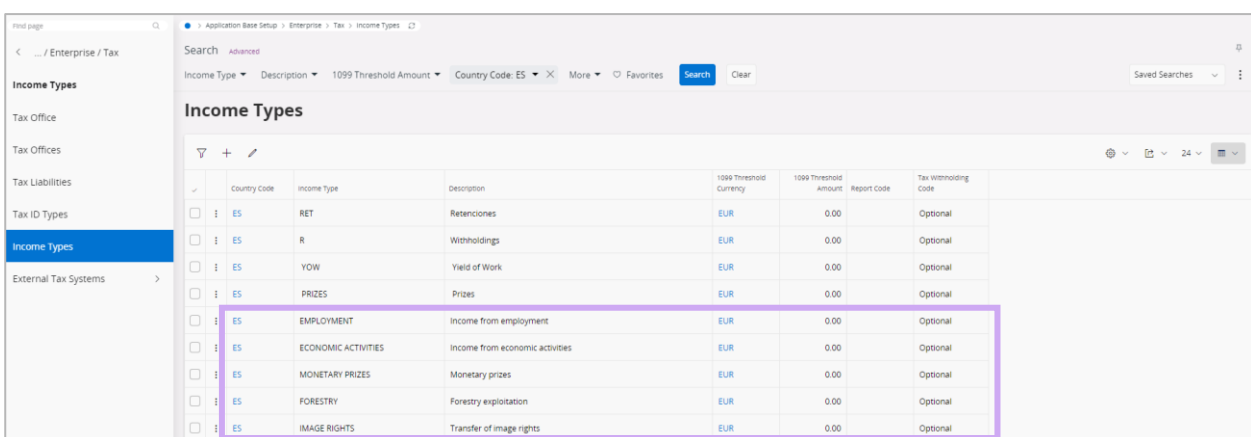

Withholding Tax Code with Tax Method **Invoice Entry** must be defined in the **Accounting Rules / Tax / Tax Codes** page to capture the withholding tax posted when the supplier invoice is entered.

8.4 Define Basic Data / Basic Data Changes Introduced

8.4.1 Income Types

Five new **Income Types** and descriptions are introduced for Spain on the **Enterprise/Tax/Income Types** page. Supplier income type identifies the category of income each invoice line from the supplier represents. This information is used to report and withhold taxes.

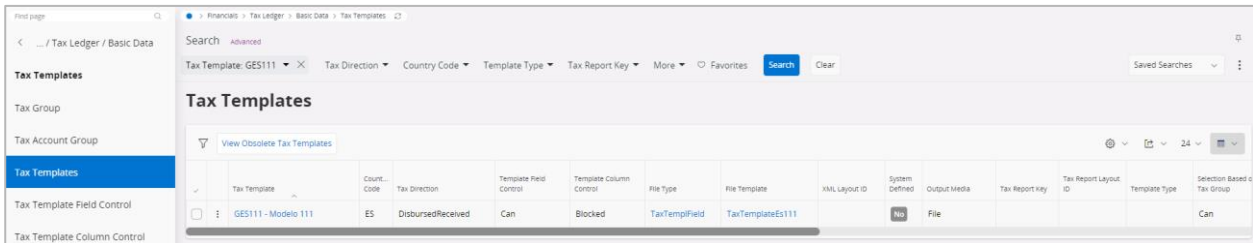

Income Type ID	Description
EMPLOYMENT	Income from employment
ECONOMIC ACTIVITIES	Income from economic activities
MONETARY PRIZES	Monetary prizes
FORESTRY	Forestry exploitation
IMAGE RIGHTS	Transfer of image rights

Income type-related data are added in the **STD-ES** template and the user will get them automatically if a new company is created using the template. Otherwise, the user needs to update the company and get the changes into the existing template.

8.4.2 Tax Template Modelo 111

A new tax template, **GES111: Modelo 111**, is introduced. This makes it possible to report tax based on the IFS Tax Ledger. Further, a new external file template **TaxTemplateEs111** is also being introduced.

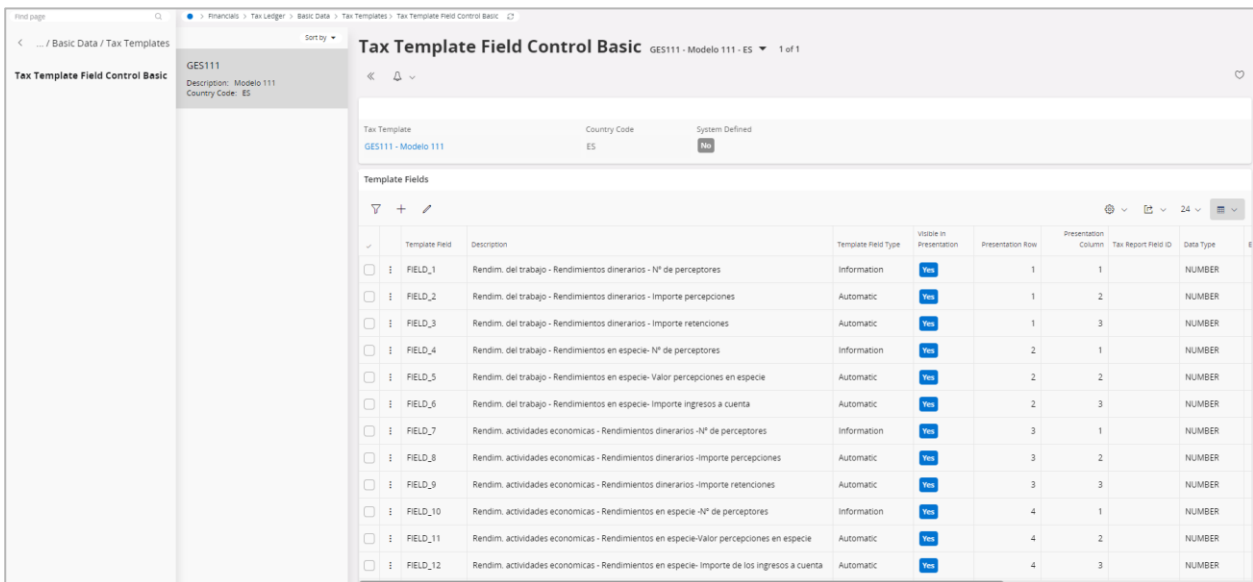

View Obsolete Tax Templates	Tax Template	Country Code	Tax Direction	Template Field Control	Template Column Control	File Type	File Template	XML Layout ID	System Defined	Output Media	Tax Report Key	Tax Report Layout ID	Template Type	Selection Based on Tax Group
<input type="checkbox"/>	GES111 - Modelo 111	ES	Disbursed/Received	Can	Blocked	TaxTempField	TaxTemplateEs111		No	File				Can

8.4.3 Tax Template Fields

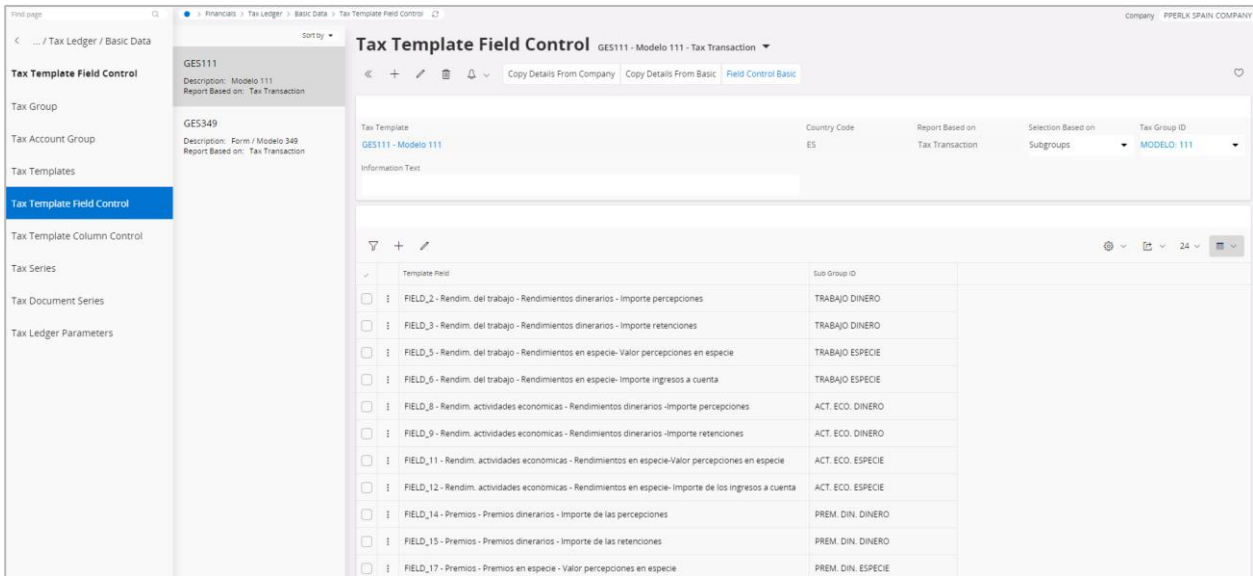

The **Tax Template Field Control Basic** is introduced for the new tax template.

Go to **Financials/Tax Ledger/Basic Data/Tax Templates** and query for the template ID **GES111** and click the **Field Control Basic** command button.

Template Field	Description	Template Field Type	Visible in Presentation	Presentation Row	Presentation Column	Tax Report Field ID	Data Type
FIELD_1	Rendim. del trabajo - Rendimientos dinerarios - N° de percepciones	Information	Yes	1	1		NUMBER
FIELD_2	Rendim. del trabajo - Rendimientos dinerarios - Importe percepciones	Automatic	Yes	1	2		NUMBER
FIELD_3	Rendim. del trabajo - Rendimientos dinerarios - Importe retenciones	Automatic	Yes	1	3		NUMBER
FIELD_4	Rendim. del trabajo - Rendimientos en especie - N° de percepciones	Information	Yes	2	1		NUMBER
FIELD_5	Rendim. del trabajo - Rendimientos en especie - Valor percepciones en especie	Automatic	Yes	2	2		NUMBER
FIELD_6	Rendim. del trabajo - Rendimientos en especie - Importe ingresos a cuenta	Automatic	Yes	2	3		NUMBER
FIELD_7	Rendim. actividades economicas - Rendimientos dinerarios - N° de percepciones	Information	Yes	3	1		NUMBER
FIELD_8	Rendim. actividades economicas - Rendimientos dinerarios - Importe percepciones	Automatic	Yes	3	2		NUMBER
FIELD_9	Rendim. actividades economicas - Rendimientos dinerarios - Importe retenciones	Automatic	Yes	3	3		NUMBER
FIELD_10	Rendim. actividades economicas - Rendimientos en especie - N° de percepciones	Information	Yes	4	1		NUMBER
FIELD_11	Rendim. actividades economicas - Rendimientos en especie - Valor percepciones en especie	Automatic	Yes	4	2		NUMBER
FIELD_12	Rendim. actividades economicas - Rendimientos en especie - Importe de los ingresos a cuenta	Automatic	Yes	4	3		NUMBER

Tax Template Field Control is added to the **STD-ES** template and the user will get them automatically if a new company is created using the template. Otherwise, the user needs to update the company and get the changes into the existing template.

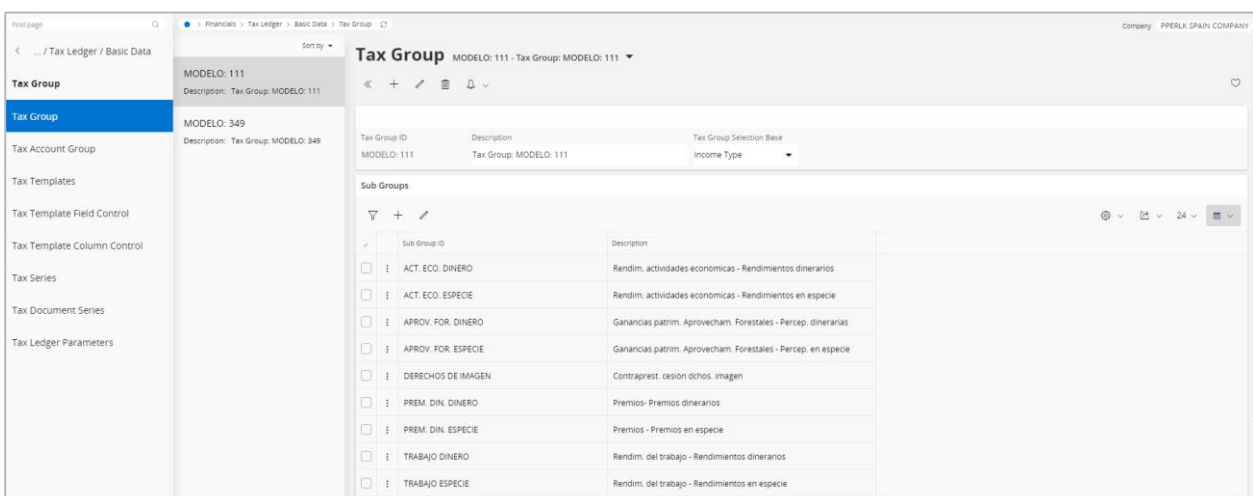

Template Field	Sub Group ID
FIELD_2 - Rendim. del trabajo - Rendimientos dinerarios - Importe percepciones	TRABAJO DINERO
FIELD_3 - Rendim. del trabajo - Rendimientos dinerarios - Importe retenciones	TRABAJO DINERO
FIELD_5 - Rendim. del trabajo - Rendimientos en especie- Valor percepciones en especie	TRABAJO ESPECIE

FIELD_15 - Premios - Premios dinerarios - Importe de las retenciones	PREM. DIN. DINERO
FIELD_17 - Premios - Premios en especie - Valor percepciones en especie	PREM. DIN. ESPECIE

8.4.4 Tax Group: Modelo 111

The tax reporting must be structured and grouped according to the local legislation for Modelo 111. Below tax group and sub group details are added to the **STD-ES** company template.

Sub Group ID	Description
TRABAJO DINERO	Rendim. del trabajo - Rendimientos dinerarios
TRABAJO ESPECIE	Rendim. del trabajo - Rendimientos en especie
ACT. ECO. DINERO	Rendim. actividades económicas - Rendimientos dinerarios
ACT. ECO. ESPECIE	Rendim. actividades económicas - Rendimientos en especie
PREM. DIN. DINERO	Premios- Premios dinerarios
PREM. DIN. ESPECIE	Premios - Premios en especie
APROV. FOR. DINERO	Ganancias patrim. Aprovecham. Forestales - Percep. dinerarias
APROV. FOR. ESPECIE	Ganancias patrim. Aprovecham. Forestales - Percep. en especie
DERECHOS DE IMAGEN	Contraprest. cesión dchos. imagen

Go to the Tax Group page via **Financials/Tax Ledger/Basic Data** to find the new tax group **MODELO: 111**.

Sub Group ID	Description
ACT. ECO. DINERO	Rendim. actividades economicas - Rendimientos dinerarios
ACT. ECO. ESPECIE	Rendim. actividades economicas - Rendimientos en especie
APROV. FOR. DINERO	Ganancias patrim. Aprovecham. Forestales - Percep. dinerarias
APROV. FOR. ESPECIE	Ganancias patrim. Aprovecham. Forestales - Percep. en especie
DERECHOS DE IMAGEN	Contraprest. cesion dchos. imagen
PREM. DIN. DINERO	Premios- Premios dinerarios
PREM. DIN. ESPECIE	Premios - Premios en especie
TRABAJO DINERO	Rendim. del trabajo - Rendimientos dinerarios
TRABAJO ESPECIE	Rendim. del trabajo - Rendimientos en especie

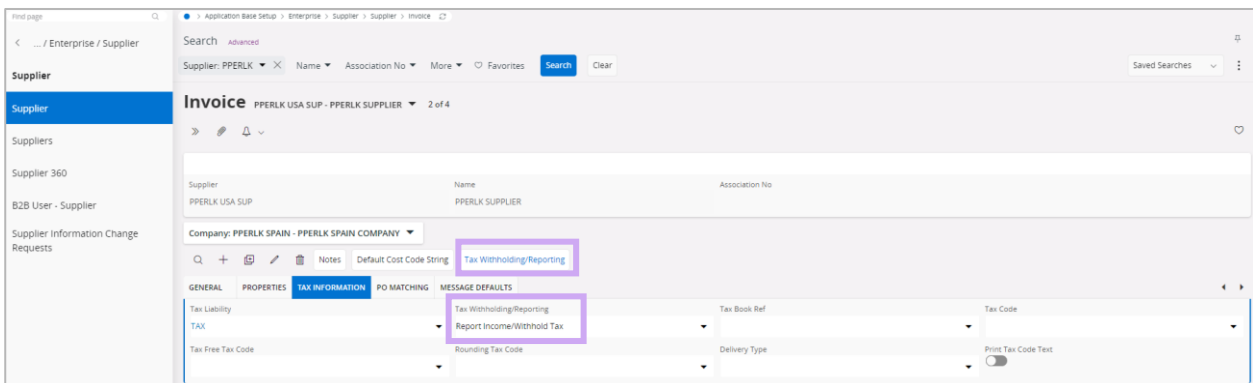

Users can manually connect the different tax codes and income type combinations to each sub group via the **Sub Group Details** section.

8.4.5 Supplier Level Basic Data

Enter Tax information to the Supplier

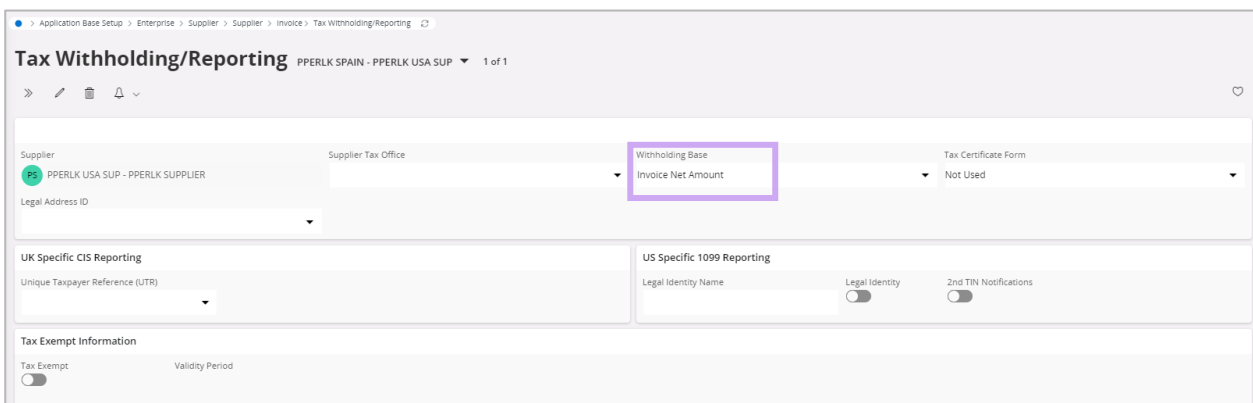

Go to the **Supplier/Invoice/Tax Information** sub tab and set the Tax Withholding/Reporting option as **Report Income/Withhold Tax** which will enable the **Tax Withholding/ Reporting** command button.

N.B: Tax ID numbers for the suppliers must be defined before setting up for withholding.

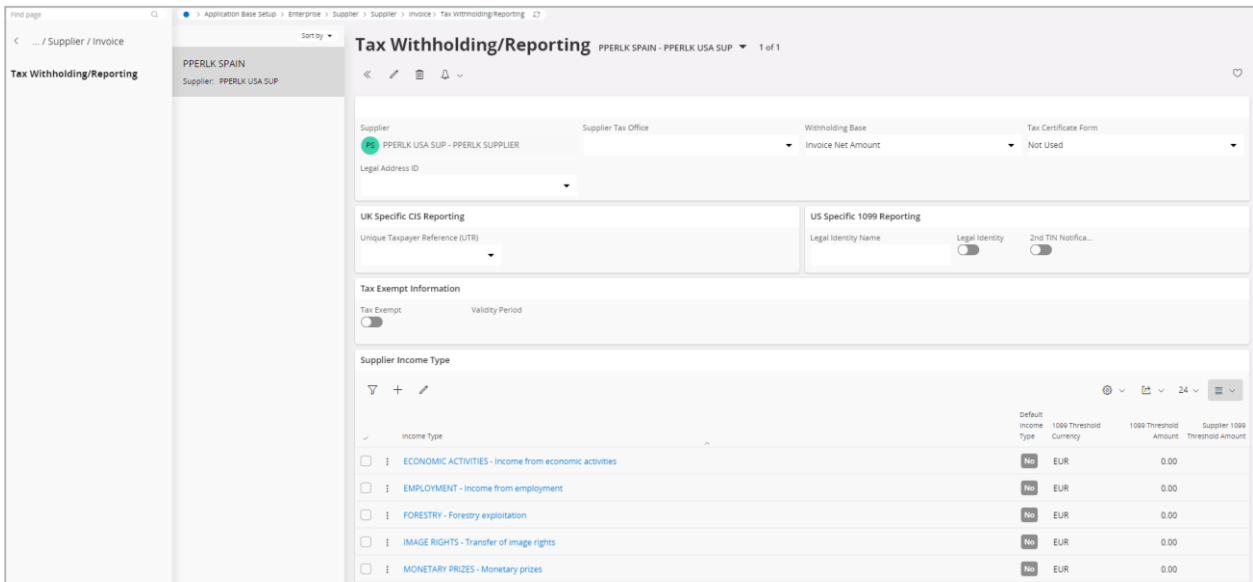

The base amount to be used for the calculation of the withheld tax amount should be **Invoice Net Amount**.

Go to **Enterprise/ Supplier/ Invoice tab/Tax Withholding/ Reporting**.

Connect Income types to the Supplier

Income types relevant to each supplier must be defined in the **Enterprise/ Supplier/ Invoice tab/ Tax Withholding Reporting** page. **Default Income Type** must be set to “Yes” to be fetched automatically when an invoice line is registered/created.

Tax Withholding/Reporting PPERLK SPAIN - PPERLK USA SUP 1 of 1

8.5 Define Tax Report

Follow the standard process to define a tax report and connect the tax template, **GES111 - Modelo 111**, and the tax group **MODELO: 111** described in previous chapters. Output media should be file only.

Tax Report 111 TEST - 111

Report No: 111 TEST Description: 111

8.6 Create Tax Report

Once the tax report is defined as explained above, follow the standard process to create a Spanish Modelo 111 tax report.

For Spanish Modelo 111, the tax reporting is done by uploading a file with tax transactions to the tax authority's system. **Print Definitive Report** will create a .txt file that will contain the legally required information.

8.6.1 Correction Proposal

The correction proposal for the Modelo 111 fiscal form will always be a **Replacement Report** replacing the information of a reported original tax proposal with the status reported/valid with the original information and the changes to that period.

8.7 Delimitations

None.
