# 1 Company Set-up

## 1.1 Overview

In order to utilize the Italian functionality, the company must be set up as using the Italian localization. This is defined on the **Company** page.

## 1.2 Define localization

- Open the **Company** page.
- Search for the company.
- Select “Italy” in the drop-down list in the **Localization** field and **Save**. Note that this cannot be changed once transactions are created for the company.

Application Base Setup > Enterprise > Company > Company >

### 1.3 Select Localization functionality

Specify which functionality to use.

- Open the **Localization Control Center** tab in the **Company** page
- All functionality available for ITALY is presented in the list. Enable/Disable the functionality based on the requirements of the company by enabling/disabling the toggle. Note that some functionality is mandatory and cannot be disabled.

Application Base Setup > Enterprise > Company > Company > Localization Control Center

#### Localization Control Center

DJ-ITALY - DJ- Italy - Italy 2 of 21

Company: DJ-ITALY Name: DJ- Italy Association No: DJ-IT@GET.CMB.GrHo Created By: DEENLK

<input type="checkbox"/> Delivery Note Print-out Mandatory to Crea	Restricts the creation of customer order / collective invoice witho	Yes	Yes
<input type="checkbox"/> Discounted Price Rounded	Enables the rounding of the sales price after applying the discour	No	No
<input type="checkbox"/> Goods/Services Statistical Codes Definition	Enables the identification/classification of goods and services for	Yes	Yes
<input type="checkbox"/> Additional Information in Italy Intrastat	Enables the use of additional information in the Intrastat report, i	Yes	Yes
<input type="checkbox"/> Italian Payment Formats	Enables two Italian payment formats RIBA and BONIFICO FOREIG	Yes	Yes
<input type="checkbox"/> Italian Tax Reports	Enables Italian Tax Reports (for Purchase, Sales and Corporate tax)	Yes	Yes

## 2 Discounted Price Rounded (moved to generic functionality)

The functionality Discounted Price Rounding is removed as a country specific functionality. This is now available as a **generic functionality** through the system toggle “**Use Discounted Price Rounding**” in Company Settings. Information and more details can be found in the supply chain News presentation for the IFS Cloud 25R2.

## 3 Goods/Services Statistical Codes Definition per Company

### 3.1 Overview Legal Requirement

In Italy sales of services must also be included in the Intrastat reporting. For that, the Service Statistic Number (CPA, Classification of products by activity) is used instead of Customs Statistic Number, which is used for goods.

### 3.2 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Goods/Services Statistical Codes Definition per Company” localization functionality must be enabled.

### 3.3 Define Service Statistic Number for sales

Service Statistic Numbers for Sales of Services are defined in the **Goods/Services Statistical Codes** page.

● > Application Base Setup > General Data > Goods/Services Statistical Codes  Company AVERY DENNISON ITALY

### Goods/Services Statistical Codes

     <span>Translation</span> 			
	Goods/Services Statistical Code	Description	Validity
<input type="checkbox"/>	032019	CPA for Services	Active
<input type="checkbox"/>	1212072	Installation services of industrial machinery and equipment	Active
<input type="checkbox"/>	1212027	Repair and maintenance services of other fabricated metal products	Active
<input type="checkbox"/>	1212735	Retail trade services of coffee, tea, cocoa and spices	Active
<input type="checkbox"/>	1212844	Road transport services of freight by refrigerator vehicles	Active

### 3.4 Connect Service Statistics Number

Defined service statistics numbers should be connected to Non-inventory sales parts and Purchase parts. New **Goods/Services Statistical Code** field is added to the *Non-Inventory Sales Part/General* tab.

This field is enabled only when the **Category** is set to “Service” in the non-inventory sales part.

Non-Inventory Sales Part MAABLK-P3 - NON INVENTORY SALES PART - RBIS

Sales Part No: MAABLK-P3, Part Description in Use: NON INVENTORY SALES PART, Site: RBIS, Sales Type: Sales Only, Category: Service, Active: ☒

GENERAL | DESCRIPTIONS | CHARACTERISTICS | CHARGES

Part Parameters: Over Delivery

Indicators: 212844 - Road transport services of freight by refrigerator vehicles

Goods/Services Statistical Code: 212844 - Road transport services of freight by refrigerator vehicles

This field is enabled only for non-inventory purchase parts. i.e. when the **Inventory Part** option is disabled.

### 3.5 Connect Service Statistic Number for Repair at Supplier in company

In Italy, service of repair should be included in the Intrastat reporting. To facilitate this, **Service Statistical Code for Repair at Supplier** field is added to the *Company/Supply Chain Information/Warehouse Management* tab.

Application Base Setup > Enterprise > Company > Company > Supply Chain Information

## Supply Chain Information

### 3.7 Delimitations

No known.

## 4 Delivery Note Print-out Mandatory to Create Customer Order Invoice

### 4.1 Overview Legal Requirement

In Italy, the business practice is to print a delivery note, if created. The invoice will have the delivery note numbers as reference and the delivery note numbers should match with the invoice. Any order that contains a delivery note that is not yet printed, shall not be invoiced. This is not a legal requirement.

### 4.2 Process Overview

### 4.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Delivery Note print-out Mandatory to Create Customer Invoice” localization functionality must be enabled.

Application Base Setup > Enterprise > Company > Company > Localization Control Center

**Localization Control Center** DJ-ITALY - DJ- Italy - Italy 2 of 18

Company	Name	Association No	Created By
DJ-ITALY	DJ- Italy	DJ-IT@GET.CMB.GrHo	DEENLK

<input type="checkbox"/>	Tax Exemption Certification	Enables the printing of the Tax Exemption Certification Number and Certification Jurisdiction Note on customer i	Yes	Yes

### 4.4 Processing customer order deliveries

Use standard functionality to create a delivery note(s) for the customer order. Following options are available:

In **Create Delivery Note for Customer Orders** page search for the relevant customer order, select it and click on the command button **Create Delivery Note**.

The screenshot shows the 'Create Delivery Note for Customer Orders' page. The breadcrumb trail is 'Sales > Shipping > Order Delivery > Create Delivery Note for Customer Orders'. The search bar is set to 'Advanced' and the status is 'Order No: P10865'. The 'Create Delivery Note' button is highlighted with a red box. Below the button is a table with the following data:

Order No	Site	Status	Order Type	Customer No	Customer Name	Coordinator	Salesperson
P10865	S01	Delivered	NO	IC IT CUS-1	Italian Customer-1	IA *	

Alternatively, the same can be done via the **Quick Order Flow Handling** page by querying for the relevant customer order, selecting it and clicking on the **Create Delivery Note** command button.

The screenshot shows the 'Quick Order Flow Handling' page. The breadcrumb trail is 'Sales > Order > Quick Order Flow Handling'. The search bar is set to 'Advanced' and the status is 'Order No: P10865'. The 'Create Delivery Note' button is highlighted with a purple box. Below the button is a table with the following data:

Order No	Site	Status	Order Type	Customer	Coordinator	Salesperson	Wanted Delivery Date/Time
P10865	S01	Delivered	NO	IC IT CUS-1	IA *		16/04/2020, 00:00

**NOTE:** Make sure the delivery note is **ONLY** created and not printed. This can be setup via **Customer Order Type** page by specifying a stop point after **Create Delivery Note** event.

## 4.5 Create Invoice

Use standard functionality to create customer invoices from the following pages.

- **Create Customer Invoices**
- **Batch Create Customer Invoices**
- **Create Collective Customer Invoices**
- **Batch Create Collective Customer Invoices**
- **Quick Order Flow Handling**

When trying to create customer invoices via the above pages using customer orders with delivery notes yet to be printed, an error message would be raised. This error would be raised real-time or in the respective background job; depending on the setup associated with the order type and the page from which the invoice creation is initiated. The error would be raised real-time only if the **Online Processing** toggle is set to ON position in the **Customer Order Type** page for the respective order type as well as the page from which the customer order creation is initiated supports online invoice creation.

Sales > Basic Data > Customer Order Type

### Customer Order Type

NO - NORMAL ORDER 1 of 4

Order Type: NO, Description: NORMAL ORDER, Priority Reservations: ☐, Online Processing: ☒, Use Shipment Invent...: ☐, Keep Remaining Res...: No

Events	Stop After
RELEASE ORDER	No
PRINT ORDER CONFIRMA	No
RESERVE ORDER	No

The error message would be displayed in a toast as follows:

Sales > Order > Quick Order Flow Handling

Search: Advanced

Status: Order No: P10866, Coordinator: More, Favorites, Clear, Settings

### Quick Order Flow Handling

Print Order Confirmation, Create Invoice, Customer Orders, Customer Order Lines

Order No	Site	Status	Order Type	Customer	Coordinator	Salesperson	Wanted Delivery Date/Time	Next Step in Order Flow
P10866	S01	Delivered	NOD	IC IT CUS	IA *		16/04/2020, 00:00	Print delivery note, Create invoice

Cannot create invoice without printing the delivery note/s 201400 when Delivery Note Print-out Mandatory to Create Customer Invoice localization functionality is enabled.

## 4.6 Delimitations

- This is only applicable for customer order invoices (normal and collective invoices) and does not cover rental transactions.
- Sending the DESADV (Dispatch Advice) message is not supported in this functionality. Therefore, if there is a delivery note that is sent through DESAADV message but not printed, users will not be able to invoice the order delivery till the delivery note is printed.

## 5 No Delivery Note for Services

### 5.1 Overview Legal Requirement

In Italy it is common business practice to exclude non-transportable (non-inventory sales part of category service) from the delivery note printout. And stop the consumption of delivery note number when there is only non-inventory sales part for a customer order.

### 5.2 Process Overview

### 5.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “No Delivery Note for Services” localization functionality must be enabled.

Application Base Setup > Enterprise > Company > Company > Localization Control Center

### Localization Control Center

10 - IFS Racing USA - Italy

Company	Name	Association No	Created By

<input type="checkbox"/>	Delivery Note Print-out Mandatory to Create Customer Invoice	Restricts the creation of customer order / collective invoice witho	Yes	Yes
<input type="checkbox"/>	Italian Payment Formats	Enables two Italian payment formats RIBA and BONIFICO FOREIG	Yes	Yes
<input type="checkbox"/>	Italian Tax Reports	Enables Italian Tax Reports (for Purchases, Sales and Corrispettiv	No	No
<input type="checkbox"/>	Italian e-invoice	Enables the generation of the e-invoice XML file including Italian I	Yes	Yes
<input type="checkbox"/>	Automatic Update of Date Applied on Inventory Transactions	Enables the update of inventory delivery transactions date applie	Yes	Yes
<input checked="" type="checkbox"/>	No Delivery Note for Services	Enables to exclude non-inventory sales parts of category services	No	Yes
<input type="checkbox"/>	Enhanced Tax Books Handling Using Invoice Types and Series	Enables the possibility to use, not only tax codes, but also invoice	Yes	Yes

The ‘Exclude Services in Delivery Notes Printout’ parameter in the *Company/Supply Chain Information/Sales* tab should be enabled.

A Non-Inventory Sales part of category 'Services' should be created and, this is standard functionality and refer IFS Cloud Documentation for details.

## 5.4 Create a non-inventory sales part of category service

Create non-inventory sales parts in the **Non-inventory sales part** page. This is standard functionality, refer IFS Cloud Documentation for more details.

## 5.5 Processing customer order deliveries

Create a customer order with non-inventory sales part of category service. Process the order until the creation of delivery note. This is standard functionality, refer IFS Cloud Documentation for more details.

## 5.6 No delivery note for service

If we try to query for the delivery note in the **Customer Order Delivery Note Analysis** page using the Order No, there will not be any record available because a delivery note is created. This is because the customer order was created only with a non-inventory sales part with category service. Here if the delivery of the customer order was done using a shipment, still the system will not create a delivery note.

If the customer order had an inventory part line or a non-inventory sales part (goods) and a non-inventory sales part (service) then, the system will create a delivery note.

The 'Exclude Services in Delivery Notes Printout' option in the **Customer Order Delivery Note Analysis** page will be selected and, both customer order lines (inventory part line and non-inventory sales part (service)) will be shown in the page.

Customer Order Delivery Note Analysis

Order No: P11073 Delivery Note No: 201727 Created: 6/18/20, 3:43 PM

CUSTOMER ORDER LINES ADDRESS

Order No	Line No	Rel No	Sales Part No	Description	Ordered Qty	Remaining Quantity	Sales UoM
P11073	1	1	DG-NON-GOODS	DG-NON-GOODS	5	0	pcs
P11073	2	1	DG-NON-SERVICE	DG-NON-SERVICE	10	0	pcs

This option 'Exclude Services in Delivery Notes Printout' indicates, whether services are excluded from the printout or not and it's not possible to change the value of this option from the **Customer Order Delivery Note Analysis** page. So, in this scenario, services on the delivery note are not printed in the delivery note printout.

## 5.7 Delimitations

No known.

## 6 Automatic Update of Date Applied on Inventory Transactions

### 6.1 Overview Requirement

There is an accounting practice in Italy to have high focus on the dates used for inventory value calculations. The date applied on the inventory transactions should be as close to the real date as possible:

In Italy the requirement is the following:

- Date applied is when the delivery note is created or
- Date applied is when the transport was actually made and
- Date applied is when the goods arrive from the customer, in the return scenario

In IFS Cloud there are two different dates on inventory transactions:

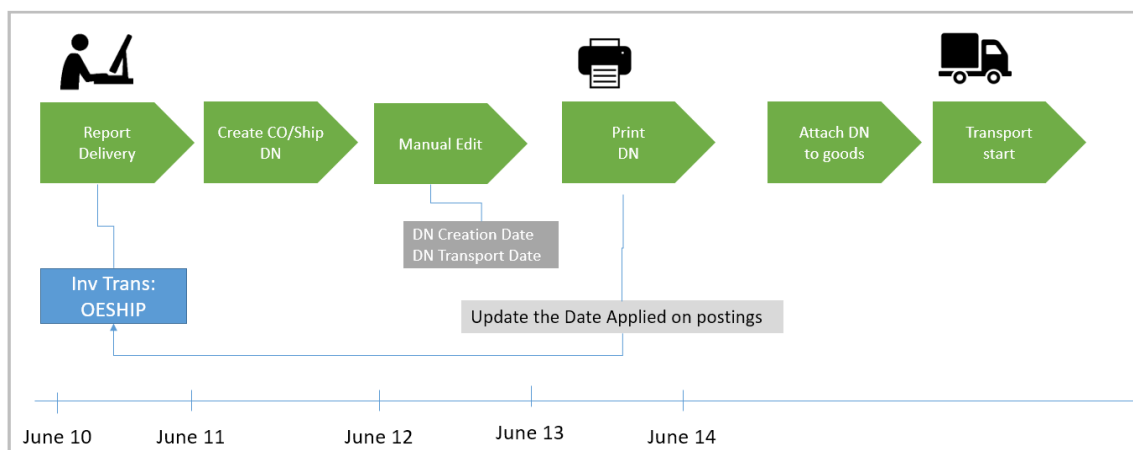

- Created: The date on which the transaction was created. This value is set automatically when a transaction is created. This field cannot be updated.
- Applied date: The actual transaction date.

In the standard functionality, the date when the user reports the delivery of a customer order (OESHIP) is set as the applied date, even if the creation of the delivery note or the actual transport took place some other day.

In the standard functionality, the date when the user reports the return of material (OERETURN) or the scrap is set as the applied date, even if the goods might have arrived to the site several days earlier.

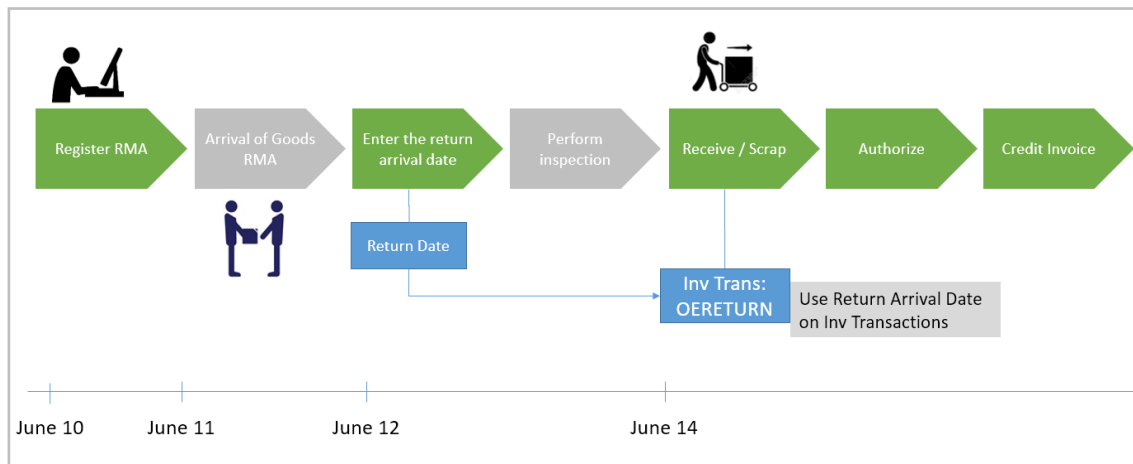

#### 6.1.1 PROCESSING CUSTOMER ORDER DELIVERIES

When printing the customer order or shipment delivery note for the first time, the date applied to the inventory transactions will be automatically updated based on either the creation date or the transport date on the delivery note. This is defined on the company level.

#### 6.1.2 PROCESSING RETURN MATERIAL AUTHORIZATIONS

The value of the **Arrival Date** will be used as date applied when generating the inventory transactions for either receiving into inventory or scrapping the goods.

Following standard behaviour, the date applied may only be changed if the inventory transaction has not been transferred to financials or if it has not been included in the inventory quantity or value aggregation per period statistics.

## 6.2 Prerequisites

The company must be set-up to use Italian localization, see the Company Set up chapter, and the “Automatic Update of Date Applied on Inventory Transactions” localization functionality must be enabled.

## 6.3 Basic Data Company

Select the appropriate value from the drop-down list **Auto Update Inv Trans Date Applied** on the *Company/Supply Chain Information/Warehouse Management* tab. Use this field to define which date to use as date applied on the inventory transactions.

The following options are available in the drop-down list:

- **No Auto Update** – No automatic update of date applied when printing the delivery note. This will be the default value and system will not update the date applied automatically.
- **Del Note Print Date** – The creation date of the delivery note will be used as date applied on the inventory transactions
- **Del Note Transport Date** – The transport date of the delivery note will be used as date applied on the inventory transactions

Application Base Setup > Enterprise > Company > Company > Supply Chain Information

## 6.4 Processing Customer Order Deliveries

Process a customer order until a delivery note is created using standard functionality.

Search for the delivery note in the **Customer Order Delivery Note Analysis** page. Date in the **Transport Date** field on the **Customer Order Delivery Note Analysis/Misc Delivery Info** tab will be automatically set to the delivery note creation date. If the actual transport date is different to the delivery note creation date, user can set the correct date as long as the delivery note is in the "Created" status. i.e. Delivery note has not yet been printed.

A value for the field **Transport Date** is mandatory when the Automatic Update of Date Applied on Inventory Transactions localization is enabled.

Field **Del Note Print Date** is set to the current date when delivery note is printed.

#### 6.4.1 PRINTING THE DELIVERY NOTE

When printing the delivery note, the date applied of inventory transactions of the delivery note lines will be updated depending on the setting on the *Company/Supply Chain Information /Warehouse Management* tab.

Regardless of the settings on company level, the prerequisites are the same as in IFS Cloud standard when manually modifying the transport date and automatically updating date applied:

- The transaction may not have been transferred to IFS Financials, and it should have no errors.
- The transaction may not be included in the inventory statistics.
- The new date may not belong to an accounting period that has already been closed.
- The new date of the transaction must be later than or the same as the start date of the latest period in the inventory value statistics
- The date cannot be a future date than the current date.

**Example 1. *Del Note Print Date*** set for the **Auto Update Inv Trans Date Applier** field:

- The customer order line is delivery reported 2020-01-21, the **Created** and **Date Applied** in OESHIP transaction is set to 2020-01-21
- The delivery note is created 2019-09-21
- The delivery note is printed 2019-09-28
- The OESHIP transaction **Date Applied** is automatically updated with the delivery note printout date 2019-09-28

## Example 2: Del Note Transport Date set for the Auto Update Inv Trans Date Applier field:

- The customer order line is delivery reported 2020-02-21, the **Created** and **Date Applied** in OESHIP transaction is set to 2020-02-21
- The delivery note is created 2019-02-28
- The Transport Date is manually changed from 2020-02-21 to 2019-02-28
- The delivery note is printed 2019-02-28

The OESHIP transaction **Date Applied** is automatically updated with the delivery note transport date 2019-02-28

As described in the Example 1 and 2, for shipments the same process is followed, and the necessary changes are done in the "Misc Delivery Info" Tab "Shipment Delivery Note Analysis".

## 6.5 Processing Return Material Authorization

Process the return material authorization using standard process.

A new **Arrival Date** field is added to the *Return Material Authorization/Return Material Lines* tab. This field is used to manually enter the actual arrival date when the goods are received from the customer.

The Arrival Date cannot be a future date compared to the site date when entering a RMA line. This information is mandatory to further process of RMA line to perform the following actions;

- Receive parts
- Receive parts against order deliveries
- Scrap parts
- Return parts from internal order transit
- Scrap Parts from Internal Order Transit

### 6.5.1 RECEIVING OR SCRAPPING RETURN MATERIAL AUTHORIZATION LINES

Report receipt into stock or scrap using standard process.

When reporting the receipt into stock or the scrap of the return material authorization line, the arrival date is used to automatically update the date applied on the resulting inventory transactions.

There are 4 new fields introduced by for Italian localization in the Return Parts or Scrap Parts Pages.

1. **External Delivery Note Reference**
2. **External Delivery Note Date**
3. **Arrival Date**
4. **Delivery Reason**
5. **Delivery Reason Description**

## 6.6 Delimitations

In the return material authorization flow: the update is not triggered for non-inventory sale.

## 7 Alternative Delivery Note Number Created when printing Delivery Note

### 7.1 Overview Legal Requirement

It is a legal requirement in Italy for companies to maintain the chronological order of the delivery note numbers with the actual deliveries. The date of the actual delivery can be related to the delivery note print date.

### 7.2 Process Overview

This will happen when the “Alternative Delivery Note Number in Chronological Order” function is enabled:

1. The alternative delivery note number is generated when the user prints the delivery note for the first time or send the dispatch advice message for the first time.
2. Until a delivery note is printed or dispatch advice message is sent, the delivery note number and the alternative delivery note number will be the same. Once delivery note is printed or dispatch advice message is sent, the alternative delivery note number will be considered as the official delivery note number.

### 7.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Alternative Delivery Note Number in Chronological Order” localization functionality must be enabled.

### 7.4 Basic Data for Alternative Delivery Note Number Creation (Standard)

The functionality *Alternative Delivery Note Number* is used in order to follow the legal requirement of having the (alternative) delivery note number in chronological order. Setup the basic data required to use the alternative delivery note number (standard functionality). Read more in IFS Cloud Documentation.

### 7.5 Stand-alone Delivery Note (Customer Order Delivery Note)

#### 7.5.1 CREATE DELIVERY NOTE

Use standard functionality to create a delivery note for a customer order delivery. Following options are available:

- In the **Create Delivery Note for Customer Orders** page use the command **Create Delivery Note**.
- In the **Quick Order Flow Handling** page open the command **Create Delivery Note**. Once a delivery note is created, it can be viewed in the **Delivery Notes Analysis** page. Read more in IFS Cloud Documentation.

When the “Alternative Delivery Note Number in Chronological Order” function is enabled, IFS Cloud will not generate “*Alternative Delivery Note Number*” at the creation of the Delivery Note.

## 7.5.2 PRINT DELIVERY NOTE

When printing the deliver note. Following options are available:

1. In the **Customer Order/Shipment Delivery Note Analysis** page use the command **Print Delivery Note**.
2. In the **Print Delivery Note for Customer Orders** page use the command **Print Delivery Note**.
3. Order Report functionality and select the **Delivery Note** as the report name. Read more in IFS Cloud Documentation.

When a delivery note is printed out for the first time, system will generate an “*Alternative Delivery Note Number*”. You can reprint Delivery Note when required. However, that action will not change the alternative delivery note number already set.

### 7.5.3 SEND DISPATCH ADVICE (DESADV) MESSAGE

Use the standard functionality to send dispatch advice message (DESADV) instead of printing a delivery note in **Created** status.

- In the **Print Delivery Note for Customer Orders** page use the command **Send Dispatch Advice Message**. (Read more in IFS Cloud Documentation).
- Note: System will generate an alternative delivery note number when you first send the DESADV message. You can send dispatch advice message as and when required. However, that action will not change the “*Alternative Delivery Note Number*”.

## 7.6 Shipment Delivery

Compared to the stand-alone customer order delivery, there is no specific step to create a shipment delivery note. However, when a shipment is completed, IFS Cloud will create a shipment delivery note.

- Use the standard functionality to process a shipment to **Completed** status. Once a **Shipment Delivery Note** is created, it can be viewed in the **Shipment Delivery Notes Analysis** page. (Read more in IFS Cloud Documentation).
- Note: System will not generate **Alternative Delivery Note Number** at creation of **Shipment Delivery Note**.
- Deliver the Shipment using standard functionality. (Read more in IFS Cloud Documentation).

### 7.6.1 PRINT SHIPMENT DELIVERY NOTE

Print shipment delivery note using standard functionality. Following options are available:

- In the **Shipment** page use the command **Print Shipment Delivery Note**.
- In the **Shipments** page use the command **Print Shipment Delivery Note**.
- In the **Consolidated Shipment** page use the command **Print Shipment Delivery Note**.
- In the **Consolidated Shipments** page use the command **Print Shipment Delivery Note**.
- In the **Delivery Note Analysis** page use the command **Print Delivery Note**.
- Use Order Report functionality and select the **Delivery Note for Shipment** as the report name.

Read more in IFS Cloud Documentation.

System will generate an **Alternative Delivery Note Number** when you print a shipment delivery note for the first time. Remember that system does not generate an **Alternative Delivery Note Number** at the time of Shipment creation. You can reprint shipment delivery notes when required. However, that action will not change the "Alternative Delivery Note Number".

### 7.6.2 SEND DISPATCH ADVICE (DESADV) MESSAGE – SHIPMENT DELIVERIES

Use standard functionality to send Dispatch Advice message (DESADV) instead of printing a shipment delivery note in created status. Follow the option below:

- in the **Shipment** page use the command **Send Dispatch Advice**.
- in the **Shipments** page use the command **Send Dispatch Advice**.
- in the **Consolidated Shipment** use the command **Send Dispatch Advice**.
- in the **Consolidated Shipments** page use the command **Send Dispatch Advice**.

Read more in IFS Cloud Documentation.

System will generate an alternative delivery note number when you first send the DESADV message. You can resend Dispatch Advice message when required. However, that action will not change the “Alternative Delivery Note Number”.

### 7.6.3 PRINT CANCELED DELIVERY NOTES

Use standard functionality to undo a “*Customer Order Delivery*”. The Delivery Note status of the Customer Order is set to “*Invalidated*”. To print the invalidated Delivery Note:

- In the *Delivery Note Analysis* use the command **Print**.

- Use Order Report functionality and select the **Delivery Note** as the report name. Enter the Invalidated delivery note number and select **OK**.
- Use Order Report functionality and select the **Delivery Note for Shipment** as the report name. Enter the Invalidated delivery note number and select **OK**.

**Note!** If a shipment delivery note has been Invalidated then the delivery note will only contain the header info, if re-printed. Information about delivered material can be seen in the previously printed document in Report Archive and in **Customer Order Deliveries** page (for Customer Orders) or **Inventory Transactions History** page (for other sources).

## 7.7 Delimitations

Pre-shipment delivery note functionality has not been modified.

Additional delimitations may apply; all relevant flows should be tested to ensure completeness.

## 8 Transport Delivery Note

### 8.1 Overview Legal Requirement

When transporting goods on public roads, in Italy, it is a legal requirement to have an official document (delivery note) accompanying the goods. A delivery note should have a unique number. This number should be assigned in a sequence that is aligned with the actual transport date.

### 8.2 Process Overview

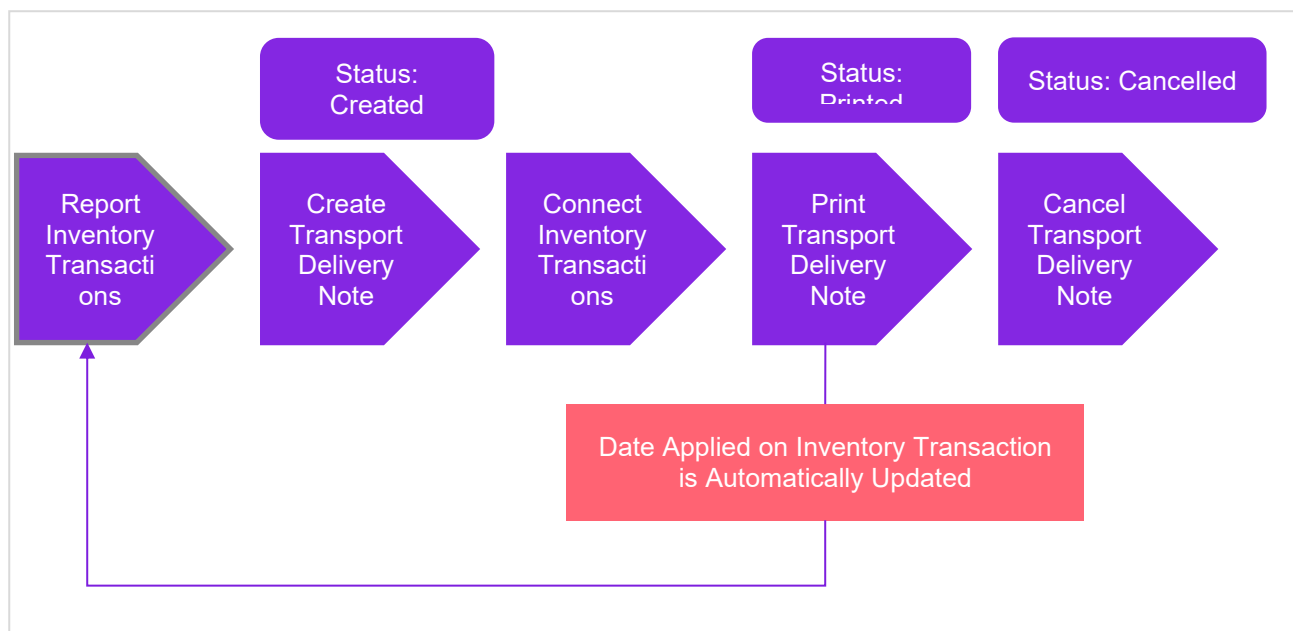

The deliveries originating from customer orders and shipment for supplier return are covered in delivery notes the standard) functionality. However, in order to meet the legal requirements above, new “Transport Delivery Note” functionality is introduced. Material and non-inventory part movements that are not originating through customer orders and shipment for supplier return will be included in this new transport delivery note.

A delivery note number will be generated automatically using the coordinator group when creating a new transport delivery note in a similar way to the customer order delivery note number. This will be referred as the preliminary delivery note number.

**Transport Delivery Note** page is used to create transport delivery notes, connect “Inventory and/or purchase Transactions”, print and reprint report. It provides an overview of all transport delivery notes.

The transport delivery notes can be connected to the transaction Types Inventory and/or Subcontract and/or Purchase and the date applied of Inventory transactions are updated with the delivery note creation date or the transportation date. This is controlled by the **Auto Update Inventory Transaction Date Applied** on the *Company/Supply Chain /Warehouse Management* tab.

The following process diagram shows the summarized flow of the creation of Transport Delivery Note.

### 8.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Transport Delivery Note” localization functionality must be enabled.

### 8.4 Basic Data Company

A new field **Auto Update Inv Trans Date Applied**, is added to the *Company/Distribution/ Inventory* tab. Use this field to define which date to use as date applied on the inventory transactions.

The following options are available in the drop-down list:

- **No Auto Update** – No automatic update of date applied when printing the delivery note. This will be the default value and system will not update the date applied automatically.
- **Del Note Creation Date** – The creation date of the delivery note will be used as date applied on the inventory transactions
- **Del Note Transport Date** – The transport date of the delivery note will be used as date applied on the inventory transactions

The screenshot shows the 'Supply Chain Information' form for 'LW COM ITALY'. The 'WAREHOUSE MANAGEMENT' tab is active. Under the 'General' section, the 'Auto update Inventory Transaction Date Applied' dropdown menu is open, displaying three options: 'Delivery Note Transport Date' (highlighted in green), 'No Update', and 'Delivery Note Print Date'. The 'Delivery Note Transport Date' option is selected.

### 8.5 Basic Data for Alternative Delivery Note Number Creation (Core)

In order to follow the legal requirement of having a transport delivery note number in date sequence, the standard functionality alternative delivery note number is used. To use the alternative delivery note number, setup the basic data. Read more in IFS Cloud Documentation. This number is generated at the time of printing the delivery note.

### 8.6 Create Transport Delivery Note

Transport delivery notes are created in the **Transport Delivery Note** page.

In the page header generic information such as creation date, supplier, forwarder information and ship via etc. is stored. Start by entering header information. Enter the Transport Date which is the date of the actual transport, enter delivery reason, receipt company or supplier and save.

- Change the default address information in the *Address Information* tab if needed.
- Connect Inventory transactions in the *Delivery Lines* tab.

The transport delivery note is editable until it is finally printed.

### 8.6.1 ADDRESS INFORMATION TAB

The address information tab is divided into three groups as follows:

- **Delivery From Address.**
  - This contains the site's delivery address information.
  - Information is read only
- **Delivery To Address.**
  - This contains the delivery address information. (Destination of the transported goods).
  - This information will be automatically set to the default delivery address of the company or the default delivery address of the supplier depending on whether you have specified a company or a supplier as the recipient. – Read only
  - If you want to manually enter the address information, (Use single occurrence option) turn the **Single Occurrence** toggle button on and edit the address information. (similar to core behavior)
  - This information is editable until the transport delivery note is finally printed.
  - Note: due to General Data Protection Regulation (GDPR), whenever **Single Occurrence** option is selected and **Delivery To Address** is entered or modified – the warning message will show up. It is user's responsibility to use personal data with natural person's consent only.

- **Forwarder Address:**

- This contains the forwarding agent's default document address information for the delivery.
- Information is read only

By default, above dialog box will be empty considering performance. Filter the transaction from transaction ID. The transaction type can be Inventory and/or Subcontract and/or Purchase.

- Under the **Inventory** category, all the inventory transactions except OESHIP, CO-OESHIP CO-DELV-OUT, RETWORK , RETCREDIT, RETWORKINT , CO-REWORK , CO-RCREDIT will be listed.
- Under the **Subcontract** category, WIPTOSUB transactions will be listed.
- Under the **Purchase** category, the following transactions will be listed: RENTRET-NI, NINVSCRAP, NSCPCREDIT, NINSCPINT for both non-inventory parts and no parts.

Once the inventory/purchase transactions are retrieved to the *Connect Transactions* dialog box, you have two options.

- Manually select the inventory/purchase transactions using the check box for each transaction line.
- To connect all transactions, click the check button in the top above the check boxes.

It is not possible to connect an inventory/purchase transaction to multiple transport delivery notes. If this is attempted an error message is given, mentioning “Transaction ID XX is already connected to delivery note 1-XXXXX”

Inventory/purchase transactions that are connected to already printed transport delivery notes will not be listed, so that they cannot be connected to any other transport delivery note.

Once the required transactions are added to the transport delivery note, manually enter the **Gross Weight**, **Net Weight** and the **Volume** and save.

## 8.8 Print Transport Delivery note

The transport delivery note is editable until it is finally printed. You can preview the report before printing.

The transport delivery note is printed from the **Transport Delivery Note** page.

- Open the context menu and select the **Print Delivery Note Preview** to print the preliminary report. The transport delivery note remains in the Created status.
- Open the context menu and select the **Print Transport Delivery Note** to print the final report. The transport delivery note status is updated to Printed.

It is possible to re-print the transport delivery notes at any time.

When a preview print is performed the document is marked with Preliminary in the top of the document.

Preliminary

Ship Via Desc

When printing the transport delivery note, you can observe the following changes.

- **Alt Del Note No** field will be updated with the alternative delivery note number as per the date entered in the pre-requisite **Error! Reference source not found.**
- Inventory transaction records/Labor and operation history records/Purchase transaction records will be updated with Delivery reason, Delivery reason description, Delivery note date and Alternative delivery note number.
- Transport delivery note header status is set to Printed.
- The date applied on the inventory transactions will be updated as per the setting **Auto Update Inv Trans Date Applied** on the *Company/Supply Chain/ Warehouse Management* tab.

In case the **Transport Date** is a future date than the site date, the date applied on the inventory transactions will not be updated. User will be notified by an error message.

## 8.9 Cancel Transport Delivery Note

To cancel an already printed transport delivery note, click the cancel button in the header of the **Transport Delivery Note** and confirm by selecting OK in the warning message. This option is only available for transport delivery notes in the “Printed” status. When cancelled, the delivery note number is removed from the inventory/purchase transaction history records that are connected to the cancelled delivery note.

## 9 Italian E-invoice for the Public Administration

### 9.1 Overview Legal Requirement

In Italy it is a legal requirement that all companies must send all invoices to Public Administration with an electronically (XML file) invoice, in Italy called FatturaPA. The FatturaPA is an electronic invoice and is the only type of invoice that will be accepted by Public administration entities, which according to the articles of associations, are obliged to use the Exchange System. The Exchange System is an electronic system capable of:

- Receiving invoices in the form of files with the characteristics of the FatturaPA
- Carrying out checks on the files received,
- Forwarding invoices to the addressee Administrations

Starting from 1<sup>st</sup> of January 2017 the format of the xml file used for the electronic invoices addressed to public customers has been changed to allow the flow of electronic invoices also between private parties. The format of the xml file is adapted to be used for this case as well.

Starting from 1<sup>st</sup> of January 2019 E-invoicing is mandatory for all types of companies. Each invoice issued in Italy for a domestic customer should be in electronic format – XML file. Every issued invoice should be submitted for authorization to the system called SDI (Sistema di Intercambio, Exchange System in English) maintained by Italian government. After it is authorized it is automatically forwarded to the customer via email or other communication channel chosen by the customer.

Invoice issued for foreign customer can also be reported to SDI but it will not be forwarded to customer via SDI.

Starting from 1<sup>st</sup> of January 2022 all customer invoices including also the one sent to foreign customers and the supplier invoices received from foreign suppliers should be sent to the Italian Authority web portal (SDI) in FatturaPA format.

The Spesometro (called also Esterometro) that was including the invoices addressed or received from foreign subjects will be abolished.

## 9.2 Solution Overview

An IFS-style data file based on FatturaPA format will be created to send invoice data to Tax Authority SDI through a 3rd party software. This 3rd party software will communicate with the Tax Authority and send responses received from the Tax Authority back to IFS Cloud as an IFS-style response file.

It is possible to handle inter-site flow (EDI/MHS/INET\_TRANS) or E-INVOICE flow parallel to sending the Italian E-invoice to the Public Administration. With the introduction of the **new basic data** page "E-invoice Processing Type", it is allowed to set up process type relating to Italian E-invoice and connect it to the Company or Customer level. The basic data relating to inter-site flow or E-invoice flow at the Customer level.

The existing basic data needs to be adjusted. The "E-INVOICE\_IT" receiver needs to be removed from the Company level and the standard process type with the format "E-invoice Italy" will be connected to the Process type field in *Company/Invoice/General*.

The solution has divided between customer invoices and supplier invoices.

## 9.3 Prerequisites

The company must be set up to use the Italian localization and "Italian e-invoice" is enabled on the *Company/Localization Control Center* tab. The "Italian Tax Reports" localization parameter must be enabled to enter fiscal number.

Localization Control Center

## 9.4 Define Basic Data

The common basic data set up for both Customer and Supplier invoices are listed below,

### 9.4.1 NEW PROCESS TYPE

New Process type STD-IT has been introduced to handle the previous E-invoicing compliance process.

### E-invoice Processing Type

Search (1) Advanced

Process Type: STD-IT Description E-Invoice Process More Favorites Search Clear

» STD-IT - Standard Template for Invoice Processing Type - Italy 1 of 1

+ [Icon] [Icon] [Icon] [Icon] [Icon]

Process Type	Description
STD-IT	Standard Template for Invoice Processing Type - ...

#### E-invoice Process

E-Invoice Process <input checked="" type="checkbox"/>	Process after Response <input type="checkbox"/>	Automatically Process Accepted Invoice <input type="checkbox"/>	Approval User
Include Invoice Image <input type="checkbox"/>			

#### Message Setup

E-Invoice Standard IFS E-Invoice 2.0	Format E-Invoice Italy	Service Provider <a href="#">IFS_CLOUD - IFS Cloud</a>
---	---------------------------	---

A new process type could be defined by user with the parameters set as below:

- E-invoice Process = Yes
- E-invoice Standard = IFS E-invoice 2.0
- Format = E-invoice Italy
- Approval User needs to be added.

Format E-invoice Italy is added to generate the Italian E-invoice to the Public Administration entity.

### 9.4.2 E-INVOICE SERVICE PROVIDER

This page is used to define the information related to 3<sup>rd</sup> party service provider.

The screenshot shows the 'E-invoice Service Provider Information' page. The breadcrumb trail is: Financials > E-Invoice > Basic Data > E-Invoice Service Provider Information. A search bar is present. A dropdown menu shows 'IFS\_CLOUD - IFS Cloud'. Below it, a table lists the service provider information:

Service Provider	Name *	Tax Identification Number
IFS_CLOUD	IFS Cloud	SP1234

To enter the fiscal number of the 3<sup>rd</sup> party service provider in Italy, a new field called **Tax Identification Number** is created in **E-invoice Service Provider Information** page. In this field, enter the fiscal number of the 3<sup>rd</sup> party service provider. This value is fetched to the first <IdCodice> tag in the IT\_XML.

The screenshot shows the 'E-invoice Service Provider Information' page with the dropdown menu set to 'PAGERO - PAGERO'. The table below shows the service provider information:

Service Provider	Name *	Tax Identification Number
PAGERO	PAGERO	SP1234

The 'Tax Identification Number' field is highlighted with a red box.

If a 3<sup>rd</sup> party service provider is not used to transmit the XML file to the Public Administration, the company itself must be defined as the service provider. In this case, a service provider entry should be created with the company's fiscal number (this the fiscal number entered in 'Fiscal No' field Italian Reports Basic Data page) entered in the **Tax Identification Number** field within the **E-Invoice Service Provider Information** page.

The screenshot shows the 'E-invoice Service Provider Information' page with the dropdown menu set to 'COMPANY - Company'. The table below shows the service provider information:

Service Provider	Name *	Tax Identification Number
COMPANY	Company	FISCAL NO COMP

Then the Service provider (3<sup>rd</sup> Party service provider or the company) should be connected to the E-invoicing Processing Type.

Financials > E-Invoice > Basic Data > E-Invoice Processing Type

The process type connected to Company/Customer will facilitate enabling the **“Send Invoice”** command from the customer invoice level. The process type connected to the Company will facilitate the **“Send Invoice Enclosure”** command from the **Invoice Enclosures – EU Taxes Analysis** page for the Supplier. This will also be given the possibility to send attachments for customer invoices when sending Italian E-invoice to the Public Administration entity.

It is also possible to modify the process type at the invoice level (Instant Invoice/Customer Order Invoice/Project Invoice) when it is connected to the Company or Customer. In such cases, the system will automatically fetch the process type associated with the Company or Customer. Priority is given to the customer-level process type. This functionality enables the exclusion of non-liable invoices from being sent to Tax Authorities by selecting a process type that is not enabled for **“E-invoice Process”** at the invoice level.

## 9.5 Solution Overview For Customer Invoices

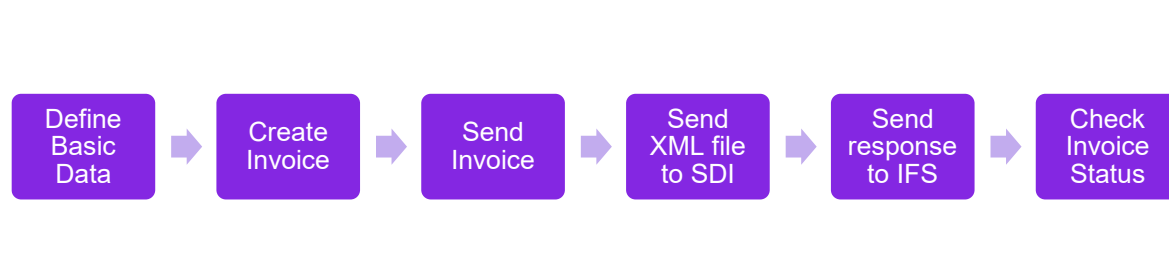

An IFS style data file based on FatturaPA format will be created to send invoice data to Tax Authority SDI through a 3<sup>rd</sup> party software. This 3<sup>rd</sup> party software will communicate with the Tax Authority and send responses received from the Tax Authority back to IFS Cloud as an IFS style response file.

To fulfill these requirements, the following has been added:

- New basic data added to the customer.
- Required format (tags) are created in the xml file for the invoice.
- In case of invoice issued to public customer it is possible to add stamp duty to the invoice.
- A new routing rule is created for Italian E-invoice so the correct XML will be generated and sent to the correct addressee. The file is placed in the outgoing folder of IFS Connect and the 3<sup>rd</sup> party service provider takes this file and sends it to SDI.
- A New page “**E-Invoice Process Monitoring**” has been introduced to view all Italian E-invoices sent to the Public Administration and fields **Reporting Sent**, **Reporting Status**, **Reporting Time** and **Reporting Error Message** have been removed from the **Sent Invoices** page.
- Handling of the response from SDI is added. The 3<sup>rd</sup> party service provider transforms the response to IFS style format and places it in the incoming folder of IFS Connect. The response is automatically uploaded to the IFS Cloud. The **E-invoice Status** of the invoice sending is visible on the **E-Invoice Process Monitoring page** and each invoice level is under the group “**E-invoice Information**”.

### Customer Invoice Process

## 9.6 Define Basic Data for Customer Invoicing

### 9.6.1 CUSTOMER MESSAGE SETUP

The message setup is now handled from the **E-invoice Processing Type** Page. If a specific customer needs to include or exclude from the sending Italian E-invoice file to public administration can connect the relevant process type in the customer. If a customer needs to exclude then it needs to connect the “**E-invoice Process**” option disabled Process type to Customer.

Customers who want to run the Inter-site flow or E-invoice flow parallelly with the Italian E-invoice need to define Message Setup (EDI/MHS/ INET\_TRANS/E-INVOICE) at Customer level.

Media Code	Address	Seq No	Method Default	Number/Date Format Locale
<input type="checkbox"/> MHS	100		No	
<input type="checkbox"/> EDI	100		Yes	
<input type="checkbox"/> E-INVOICE	100	2	No	

### 9.6.2 CUSTOMER, INVOICE TAB

A new group **Italian E-invoice** is added to *Customer/Invoice/General* tab. It contains:

- **E-invoice Receiver Code.** Define with 6 or 7 characters depending whether customer is public or private. This value is written to <CodiceDestinatario> tag in XML file. This is to ensure to transmit the invoice to the correct addressee through the Exchange System.
- **Certified E-mail.** Define email address of the customer defined in Exchange System. List of values show email addresses of customer defined on the *Comm. Method* tab. This value is written to <PECDestinatario> tag in XML file.
- **Tax Representative.** Define identity of another customer being tax representative. Make sure that the customer entered has tax ID defined on *Address/Document Tax Information* tab. When it is filled then block <RappresentanteFiscale> is filled in XML file with the name and tax ID number of the tax representative.
- **Person ID.** Define person ID if the customer is a natural person. When it is filled then tags <Nome> and <Cognome> are filled with first and last name of the person in <CessionarioCommittente>, <DatiAnagrafici>, <Anagrafica> block. Otherwise <Denominazione> tag is filled instead.

### 9.6.3 CUSTOMER ADDRESS

New **Permanent Establishment** option is added to Customer/Address/Delivery Tax Information tab. It should be enabled for Italian addresses of foreign customers having permanent establishment (“stabile organizzazione” in Italian) in Italy. When this option is enabled for some address of the customer then <StabileOrganizzazione> block is filled in XML file.

Starting from the 1<sup>st</sup> of January 2022 all customer invoices including ones sent to foreign customers should be sent to the Italian Authority web portal (SDI) in FatturaPA format. With that change, added Default value 99999 into the tag <CAP> and skip the tag <Provincia> for foreign Customers. If the **Tax ID Number** and **Fiscal Number** of the foreign customer is empty, add the default value 99999999999 for the tag <IdCodice> without blocking the send.

Changes related to *Delivery Tax Information/Supply Country/Tax Exempt Info*. With a new law nr 293390/2021 of 29 October 2021, the Italian Authority has introduced new requirements for the electronic invoices of the customer that has exemption certificate to control that the certificate that allows the customer to buy without Vat is valid. For this new requirement therefore, the following changes are required for the current solution:

- Added fixed value “INTENTO” instead of the fixed value “CERT INT” for the tag <TipoDato>.
- Added new tag <RiferimentoData> It should be filled when there is a valid Exemption Certificate and the value for this field should be retrieved from Issue Date. The format is YYYY-MM-DD.
- If the Nature of VAT is equal to N2.1 insert the fixed Value “INVCONT” to the new tag <TipoDato>.

Companies that are in the Register of the company for art 2250 of the Civil code in Italy need to fill the block <IscrizioneREA> in the XML. New five fields have been added to the

Company/Invoice/General tab under Italian E-invoice and entered value will fetch to the block <IscrizioneREA>.

#### 9.6.4 STAMP DUTY ON INVOICES

Some transactions invoiced in Italy have to have the option to add a stamp duty. In order to fulfill these requirements, the invoice fee functionality in standard is utilized.

The **Invoice Fee** option should be enabled on the *Customer/Invoice/General* tab.

The screenshot shows the 'Customer/Invoice/General' tab for customer 'CUSTOMERSWIT'. The 'INVOICE INFORMATION' section is active. The 'Invoice Fee' option is highlighted with a red box and is currently enabled (indicated by a blue toggle switch).

Create the following in the **Invoice Information per Currency** page.

The screenshot shows the 'Invoice Information per Currency' page. The 'Currency Code' is set to 'EUR'. The 'Invoice Fee Amount' is set to '2.00', which is highlighted with a red box. Other fields include 'Rounding Factor' (0), 'Invoice Fee Threshold Amount' (1000.00), 'Print Euro Equivalents on Invoice' (No), 'Print Tax in Alternative Currency' (Never), and 'Alternative Tax Currency' (Accounting Currency).

Use the command “**Add/Remove Invoice Fee**” on the **Instant Invoice**, **Customer Invoice** and **Project Invoice** pages. To added or removed the invoice fee to the invoice. The message displayed will be:

- **The fee X EUR has been added to the invoice** – when fee has been added to the invoice.
- **The fee has been removed from the invoice** – when fee has been removed.
- **The Invoice Fee Amount not found in Invoice Information per Currency** – when Invoice Fee Amount is not found.

The screenshot shows the 'Instant Invoice' page for invoice 'PR - 208837'. The 'Invoice Fee' is set to 'Yes'. The 'Add/Remove Invoice Fee' option is highlighted with a red box in the right-hand menu.

Some transactions invoiced in Italy need to have the option to add a stamp duty and write it to XML invoice, but it should not be included in invoice total - so that the customer cannot be charged with it. This is the case for public customers – stamp duty is calculated when there is 0% VAT on the invoice, certain types of articles are sold, and invoice net amount is greater than 77 EUR.

In order to fulfill these requirements, new **Stamp Duty** option has been added to **Tax Codes** page. It is only possible to select on tax codes with 0 % of Tax type

✓	Tax Code	Description	Tax Type	Tax Rate	Deduction %	Valid From	Valid To	Tax Method Tax Received	Tax Method Tax Disallowed	Tax Amount at Invoice Printout	Tax Amount Limit in Accounting Currency	Tax Reporting Category	Stamp Duty	Generation	Tax Category

Implement Tax Withholding

There are three scenarios, where stamp duty is reported in XML invoice depending on different parameters settings:

- **Invoice Fee** is NOT enabled on **Customer/Invoice/General** tab, invoice does not have invoice fee and the tax code with **Stamp Duty** is used on invoice – then stamp duty is written to the XML invoice and is NOT included in invoice total. The amount is taken from **Invoice Information per Currency** page.
- **Invoice Fee** is selected on **Customer/Invoice/General** tab, invoice has invoice fee and tax code with **Stamp Duty** is used on invoice – then stamp duty is both written to XML invoice and included in invoice total.
- Otherwise – no stamp duty information is written to XML file, however there might be standard invoice fee included in invoice total – treated as additional invoice line.

No validation is done for the invoice net amount – the applicable set up of parameters is user responsibility.

## 9.6.5 PROTOCOL NUMBER FOR VAT EXEMPTION

The Protocol Number (NAUTICA) is mandatory for claiming tax exemptions on sales made to vessels. As required by law, this number must be included in the e-Invoice XML. The Protocol

Number entered in **Customer Order > Invoice Section** (at the time of printing or sending the invoice) is automatically captured and displayed in the XML under the <AltriDatiGestionali> tag with the label **"NAUTICA"**. This block appears within the <DettaglioLinee> section of the e-Invoice XML.

The screenshot shows the 'Customer Order' interface for order V12307. The order is for customer MKALLK ITA, site MK-IT, and order type MB. The order is marked as 'Invoiced/Closed'. The 'Order Amounts' section shows a total net amount of 100.00 USD, a total contribution margin of 50.00 USD, and a total net amount of 50.00 EUR. The 'Invoice' section shows a tax ID of N-123456789, a tax liability of TAX, and a payment term of 0 - Due Immediately. The 'Delivery Address' and 'Document Address' are also visible.

## 9.7 Create customer invoice

- Create an invoice using the standard functionality for invoices with the Process Type connected to the **Company** or **Customer**.
- Select command **Send Invoice**.
- A new group **E-invoice Information** has been introduced to view the status of Italian E-invoices sent to the Public Administration.
- XML file is placed in IFS Connect outgoing folder and can be verified from there if needed.
- This is the file that will be picked up by the 3rd party service provider and sent to SDI system.

The screenshot shows the 'Instant Invoice' interface for invoice PR - 244687. The invoice is for customer CUSTOMER SWIT - CUSTOMER SWIT, invoice type INSTINV, and series ID PR. The invoice number is 244687, and the project ID is 08/09/2023. The 'Send Invoice' button is highlighted. The 'E-invoice Information' section shows the invoice status, E-invoice reference number, E-invoice reference date, and response error code. The 'Lines' section shows a single line item with a quantity of 1, a unit of measure of Net Price, and a tax class of 1.

- If the customer is setup to run inter-site flow (EDI/MHS/ INET\_TRANS) or E-invoice flow (E-INVOICE), a separate message will be created along with the Italian e-invoice.
- A New page “**E-Invoice Process Monitoring**” has been introduced to view all Italian E-invoices sent to the Public Administration.

(1)	Document Type	Identity	Series ID	Document No	Attachments	Sent Time	E-Invoice Status	E-Invoice Reference Number	E-Invoice Reference Date	Document Status	Response Error Code	Error	Response Error

## 9.8 Invoices with Foreign Currencies

SDI accepts the FatturaPA format is only from currency EUR. Therefore, all the amount related tags in the XML has to be reported in EUR (Accounting Currency). However, for the foreign currency-based invoices (other than EUR), companies have a need to communicate the foreign currency amounts to customers to make the payments. To communicate foreign currency amounts at header level and line level of the invoice <Causale> and <AltriDatiGestionali> modified respectively. Header level modified **Invoice Text** has used for the tag <Causale>.

```
<Causale>Contributo ambientale CONAI assolto ove dovuto</Causale>
<Causale>Please Pay in USD</Causale>
<Causale>Invoice Currency Code USD</Causale>
<Causale>Total Payment Amount 1250.00</Causale>
<Causale>Total Gross Amount 1250.00</Causale>
<Causale>Total Net Amount 1000.00</Causale>
<Causale>Total Tax Amount 250.00</Causale>
```

```
<AltriDatiGestionali>
  <TipoDato>ImportiVal</TipoDato>
  <RiferimentoTesto>Gross Am 1250.00 Net Am 1000.00 Tax Am 250.00</RiferimentoTesto>
</AltriDatiGestionali>
```

CONAI consortium members should add the fixed text on the customer invoices. Text can be entered in the Community Compliance field in Company/Invoice/General tab under Italian E-invoice and it will fetch the tag <Causale> as in the above image.

## 9.9 Document Types Customer Invoices

According to new technical documentation issued by SDI in 2020, following new document types are handled in the solution.

- ‘TD02’ - Deposit/Advance on invoice (Document Type Code)
- ‘TD21’ - Self invoicing (defined in ex art.7 paragraph 4 of DLgs 471/97)
- ‘TD22’ - Extractions of goods from VAT Warehouse
- ‘TD23’ - Extractions of goods from VAT Warehouse with payment of VAT
- ‘TD26’ - Sale of depreciable assets and for internal transfers
- ‘TD27’ - Self invoicing for self-consumption or for free transfer without recourse

According to new technical documentation issued by SDI in 2021, the following new document types are handled in the solution and will be mandatory from 2022:

- 'TD05' - Debit note
- 'TD25' - Deferred invoice ex art.21, c.4, lett. a)

When issuing document types listed above, the redefined header level **Document Type Code** has to be connected to the invoice and **Document Type Code** will be fetched to the <TipoDocumento> tag. In here, the user has to add following predefined **Document Type Code** in the **Document Type Codes** page.

Document Type Code	Description
TD02	Deposit/Advance on invoice (Invoice Text)
TD05	Debit note
TD21	Self invoicing for splaphoning
TD22	Extractions of goods from VAT Warehouse
TD23	Extractions of goods from VAT Warehouse with payment of VAT
TD25	Deferred invoice ex art.21, c.4, lett. a)
TD26	Sale of depreciable assets and for internal transfers (ex art.36 DPR 6
TD27	Self invoicing for self-consumption or for free transfer without recou

- 'TD27' will be fetched to the <TipoDocumento> tag when issuing free of charge invoices where company pays the VAT (Refer **Free of Charge (FOC)** functionality).
- 'TD04' will be fetched in <TipoDocumento> tag when issuing a Customer Credit invoice with net amount negative
- 'TD01' will be fetched in <TipoDocumento> tag when issuing a Customer invoice with net amount positive and there is not any Document Type Code
- 'TD24' will be fetched in <TipoDocumento> tag when issuing a Customer invoice with net amount positive, there is not any Document Type Code and there is at least one delivery note that has delivery note date < Invoice Date

New field **Document Type Code** added to the **Instant Invoice**, **Customer Invoice** and **Project Invoice** pages as follows,

Instant Invoice PR - 204200

## 9.10 Invoices with Split Payment VAT

Split payment invoices can be registered in the system as follows

- The tax code specified on invoice line must have value "SPLIT" in the **Tax Code Text** field in the **Tax Texts per Tax Code** page.
- Tax withholding with tax method "Invoice Entry" must be connected to invoice line. The total withholding amount should match total VAT amount on the invoice.

When XML file is generated for the split payment invoice, <ImportoPagamento> tag (amount to pay) of the first installment is decreased with VAT amount.

## 9.11 Invoices with Tax Withholding with Tax Method Payment

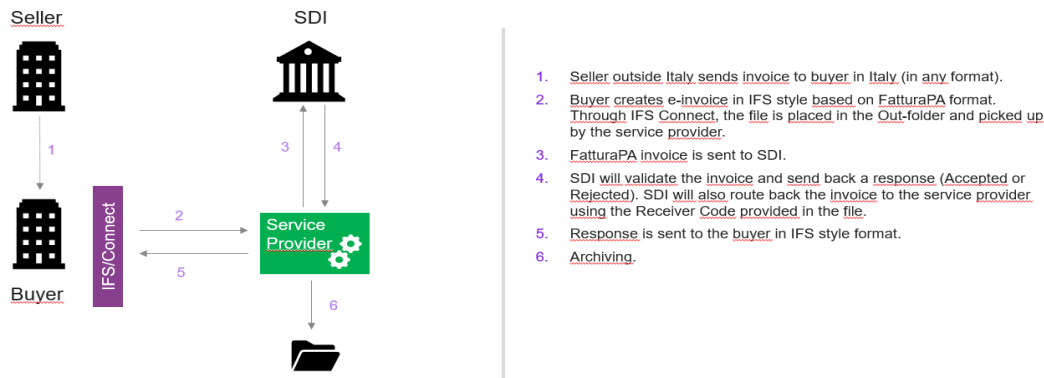

When XML file is generated for invoice with tax withholding with tax method "Payment", tax withholding amount affects <ImportoPagamento> tag (amount to pay) for all installments of the invoice, proportionally to installment gross amount and according to the same rules as amounts to pay are suggested when paying invoice in the **Mixed Payment** page.

Example

- Customer invoice with net amount 4.000, tax 22% and gross amount 4.880.
- Tax withholding with tax method "Payment": 20%, amount 800.
- Three invoice installments: 25%, 50% and 25%. Payment terms with tax distribution "Even".
- Installment amounts: 1.220, 2.440 and 1.220.
- <ImportPagamento> tags: 1.020, 2.040 and 1.020.

## 9.12 Solution Overview for Supplier Invoices

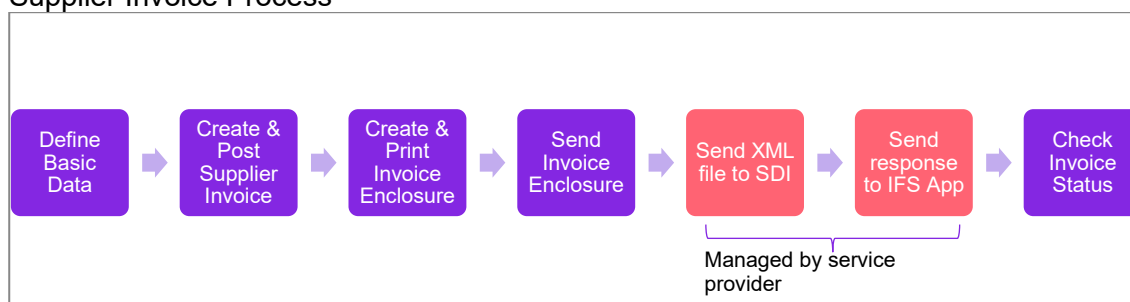

Foreign supplier invoices, as well as domestic supplier invoices where reverse charge applies, must be submitted to SDI in FatturaPA format. An IFS style data file based on FatturaPA format will be created to send invoice data to Tax Authority SDI through a 3<sup>rd</sup> party software. This 3<sup>rd</sup> party software will communicate with the Tax Authority and send responses received from the Tax Authority back to IFS Cloud as an IFS style response file.

To fulfill the new requirement, the following solution should be adopted:

- Electronic supplier invoices should be created and sent to SDI where reverse charge is applied. In IFS cloud, this means that supplier invoices where a calculated tax code is connected to the invoice line need to be sent. A new sequential invoice numbering is needed, together with the original invoice number.
- New Document Types TD16, TD17, TD18, TD19 and optionally TD20 are used for this purpose and must be included in the file.
- To achieve this, Invoice Enclosure will be used, and **Document Type Code** will be connected to tax code from **Tax Texts per Tax Code** page. Document Type Code represents the Document Type.
- Supplier should be setup with a **Delivery Type** that is connected to Invoice Enclosure.
- New basic data fields for electronic invoicing will be added to Company and Supplier.
- The process type with format “**E-invoice Italy**” should be connected to the Process type field in *Company/Invoice/General*.
- Possibility to send the supplier invoice will be added from the **Invoice Enclosure - EU Taxes Analysis** page.
- New fields **E-invoice Sent**, **E-invoice Status**, **Response Error Code**, **Response Error** and **Error** have been added to the **Invoice Enclosures – EU Taxes Analysis** page.
- A new page **E-invoice Process Monitoring** is created to show the sent supplier invoices including the resending option.
- Same response handling as for customer invoices will be used.

### Supplier Invoice Process

## 9.13 Define Basic Data for Supplier Invoices

### 9.13.1 E-INVOICE RECEIVER CODE IN COMPANY

The field E-invoice Receiver Code has been added in *Company/Invoice/General* tab (in the “Italian E-invoice” group). This is needed since SDI will route the invoice back to a service provider for archiving reasons.

### 9.13.2 SUPPLIER, INVOICE TAB

Person ID field I has been added in *Supplier/Invoice/General* tab (Command as “Italian E-Invoice”). This is needed to distinguish if the supplier is a physical person.

## 9.14 Document Types for Supplier Invoices

The Document Type TD16-TD17-TD18-TD19-TD20 should be linked to the calculated tax code to have the right document type for the supplier enclosure invoices. Following new document types are handled in the solution,

- ‘TD16’ - Integration Supplier Invoice applying reverse charge with Italian Supplier.
- ‘TD17’ - Integration and self billing for purchase of services outside EU.
- ‘TD18’ - Integration for purchase in Europe.

- 'TD19' - Integration /Self billing for purchase of goods art 17 from foreign suppliers that has fiscal representative in Italy.
- 'TD20' - Self-billing invoice to create in case the invoice is not received.

All Document Types needed for supplier invoice need to be added to the **Document Type Codes** basic data page.

Document Type Codes		
	Document Type Code	Description
<input type="checkbox"/>	TD16	Integrazione fattura reverse charge interno
<input type="checkbox"/>	TD17	Integrazione/autofattura per acquisto servizi dall'estero
<input type="checkbox"/>	TD18	integrazione per acquisto di beni intracomunitari
<input type="checkbox"/>	TD19	integrazione/autofattura per acquisto di beni ex art.17 c.2 DPR 633/7
<input type="checkbox"/>	TD20	Autofattura per regolarizzazione e integrazione delle fatture (art.6 c.)

#### 9.14.1 DOCUMENT TYPE CODE ADDED IN THE TAX TEXTS PER TAX CODE

The field **Document Type Code** has been added with a LOV to **Tax Texts per Tax Code** page to be able to link the document type to the Tax code with type Calculated Tax so that when a tax code is selected in a Manual Supplier Invoice line, Document Type Code is fetched.

Tax Texts per Tax Code						
	Tax Code	Tax Code Text	Valid From	Valid To	Nature of Operation	Exclude From Spesometro Declaration
<input type="checkbox"/>	E1 - EU Tax with no red...	E1	06/12/2021	31/12/2049	N2 Not Subjected to Tax (Obsolete)	No

The **Document Type Code** field has been added also in the invoice line of supplier invoice with the option to edit it.

## 9.15 Create Electronic Invoice from Supplier Invoice

- Create Manual Supplier Invoice. Use a delivery type connected to Invoice Enclosure and use a calculated tax code connected to Document Type code. Document Type code is representing the document type.
- Post the invoice. Now the Invoice Enclosure is created.
- Print the Invoice Enclosure.
- In the **Invoice Enclosures – EU Taxes Analysis** page the possibility to **Send Invoice Enclosure** has been added. It is only possible to Send Invoice Enclosure when Invoice Enclosure is printed.
- New fields **E-invoice Sent**, **E-invoice Status**, **Response Error Code**, **Response Error**, and **Error** have been added in the **Invoice Enclosures – EU Taxes Analysis** page to check if E-invoice Enclosure is sent or if any error occurred.

IT_1	T19				1000.00	120.00	1120.00	1000.00	120.00	1120.00	15000.00	1800.00	16800.00			

Same Routing Rule, Routing Address and same transformer as for sending of customer invoices will be used.

The following new validations have then been introduced:

- When posting manual supplier invoice validate connected Document Type Code. It is not allowed to use different Document Type Codes in the same invoice.
- When posting manual supplier invoice validate that invoice line with Document Type Code must have a Delivery Type connected.
- Block the possibility to use the Cancel functionality and Cancel and Create for Italian company when invoice contains delivery type connected to Document Type Code with calculated tax code and invoice enclosure is Sent.

## 9.16 External Supplier Invoice

Added functionality to fetch **Document Type Code** connected to a tax code when loading a supplier invoice. It is also possible to add the **Document Type Code** manually. The new field is added in *External Supplier Invoice Line Information*.

## 9.17 Uploading response file

The same response handling will be used for both customer and supplier invoices.

### 9.17.1 TRANSFORM RESPONSE FILE

The response file received from SDI system is transformed to IFS format used for response for Italian E-invoice. The transformation is done by 3<sup>rd</sup> party software or XSL transformer (not included).

ReceiveInvoiceResponseSampleACCEPTET

```

<?xml version='1.0' encoding='UTF-8'?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/">
  <SOAP-ENV:Header>
    <fndcn:Message SOAP-ENV:mustUnderstand="1" xmlns:fndcn="urn:ifsworld-com:schemas:fndcn">
      <fndcn:Type>CONNECT</fndcn:Type>
      <fndcn:Function>RECEIVE_EINVOICE_RESPONSE</fndcn:Function>
      <fndcn:Sender>HttpTester</fndcn:Sender>
      <fndcn:Receiver>HttpClient</fndcn:Receiver>
      <fndcn:SentAt>2020-08-18T12:41:07+05:00</fndcn:SentAt>
      <fndcn:ExpiresAt>2020-08-25T12:41:07+05:00</fndcn:ExpiresAt>
    </fndcn:Message>
  </SOAP-ENV:Header>
  <SOAP-ENV:Body>
    <receive_e_invoice_response xmlns="urn:ifsworld-com:schemas:receive_e_invoice_response_in_receive_response_request">
      <IDENTIFIER KEY>SGIT2382 00111</IDENTIFIER KEY>
      <INVOICE_REFERENCE_NUMBER></INVOICE_REFERENCE_NUMBER>
      <QR_CODE></QR_CODE>
      <RESPONSE_STATUS>APPROVED</RESPONSE_STATUS>
      <RESPONSE_ERROR_CODE></RESPONSE_ERROR_CODE>
      <RESPONSE_ERROR></RESPONSE_ERROR>
      <EINVOICE_REFERENCE_DATE>2023-09-07</EINVOICE_REFERENCE_DATE>
    </receive_e_invoice_response>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>

```

Transformed XML file is placed in incoming folder of IFS Connect by 3<sup>rd</sup> party service provider. From this folder it is automatically uploaded to IFS.

For customer invoices, the status of the response is set on the invoice and presented in the field **E-invoice Status** in the E-invoice Information group in Invoice pages and **E-invoice Process Monitoring** page.

For supplier invoice enclosures, the status of the response is set on the invoice and presented in the field **E-invoice Status** in **E-invoice Process Monitoring** page and **Invoice Enclosures – EU Taxes Analysis** page.

Possible values of **E-invoice Status** are “**Failed**”, “**Pending**”, “**Accepted**” or “**Rejected**”. The value “**Pending**” is set automatically when XML file is created for the E-invoice. If schema validation errors occurred at the time of sending the Italian E-invoice to the government, E-invoice Status will set to **Failed**.

The value “Accepted” is set when accepted response message is uploaded to IFS Cloud . It is the final version of the status which means that invoice is accepted by SDI system and can be forwarded to the customer or it is forwarded automatically by SDI.

The value “Rejected” is set when the rejected response message is uploaded to IFS Cloud. In this case:

- Check the 3<sup>rd</sup> party product used for communication with SDI to find out what is the error message sent by SDI.
- Correct data in the IFS Cloud and Generate an XML file once more for the given invoice. This is done by selecting the **Resend E-invoice** command in **E-invoice Process Monitoring** page.

## 9.18 Overview of Sent Invoices and Error Handling

### 9.18.1 SENT INVOICES

The invoice has been sent in case of using inter-site (EDI/MHS/INET\_TRANS) flow or E-invoice flow (E-INVOICE) in parallel to sending the Italian E-invoice to the Public Administration entity, Intersite/E-invoice invoice sent details is appearing in the **Sent Invoices** page. Italian E-invoice to the Public Administration entity is appearing on the **E-invoice Process Monitoring** Page. The new page indicates the information of the file sent to the Public Administration entity. The Italian E-invoice status will indicate the **E-invoice Status** and it will be set to **Pending**. **Sent Time** shows showing sent date and sent time of the Italian E-invoice.

The command **Resend Invoice** is for resending the inter-site flow (EDI/MHS/INET\_TRANS) or E-invoice flow (E-INVOICE) from the **Sent Invoices page** and the command **Resend E-invoice** is for resending the Italian E-invoice to the Public Administration entity from **E-invoice Process Monitoring** Page.

E-Invoice Process Monitoring

### 9.18.2 ERROR HANDLING

The **Error** field on the **E-invoice Process Monitoring** page shows the description of the validation error that occurred at the time of sending the Italian E-invoice file to the Public Administration. Previously validation errors relating to Italian E-invoice have been handled in the **Sent Invoices** page and **Invoice Enclosures – EU Taxes Analysis** page.

Please refer to the core documentation **E-invoice Process** (2.9.15.1) for more information since the Country specific E-invoice models have been handled as generic solutions in core.

## 9.19 Delimitations

The following delimitations exist when reporting Tax Withholding with tax method "Payment" in <ImportoPagamento> tag.

- Solution is only applied for invoices without Split Payment.
- Tax withholding code with tax method "Invoice Entry" cannot be specified on the invoice.
- Only single tax withholding code with tax method "Payment" can be specified on the invoice.

Not possible to send attachments with EDI/MHS Media Code setup.

Additional delimitations may apply; all relevant flows should be tested to ensure completeness.

## 10 Italian Payment Formats

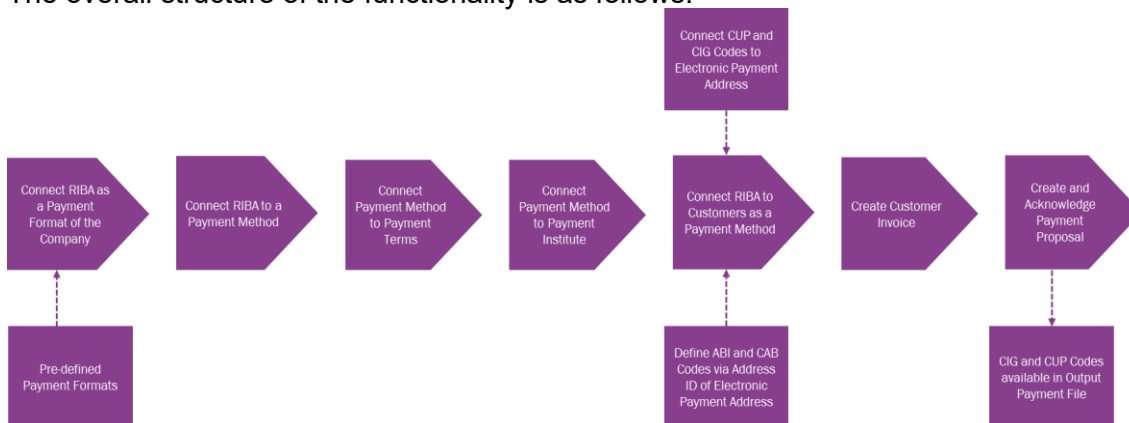

### 10.1 Payment format - RIBA

#### 10.1.1 OVERVIEW LEGAL REQUIREMENT

It is a common business practice to use cashless payment methods in Italy. Payment cards are the most widely used form of payment. In terms of value, credit transfers are the dominant payment method. Italian domestic non-pre-authorized direct debit, RIBA, is an electronic collection instrument. It is classified as a non-pre-authorized direct debit, as the creditor requires the debtor's agreement to collect their receivables. RIBA is used by firms to collect trade and other credits.

#### 10.1.2 PROCESS OVERVIEW

The overall structure of the functionality is as follows:

#### 10.1.3 PREREQUISITES

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Italian Payment Formats” localization functionality must be enabled.

#### 10.1.4 BASIC DATA

##### 10.1.4.1 Enable Payment Format

Payment format RIBA is added to the *Payment Formats per Company* page. Search for RIBA payment format and select it. Then click on the **Connect to Company** command button to enable this payment format.

Payment Format ID	Format Description	Used in Company	Allowed Currencies	Payment Party Type	Input/Output Type	Repeatable Output	Format Instruction	Incoming File Template	Outgoing File Template
(1) RIBA	RIBA, Domestic Payments, Italy	No	%	Customer	FILE	Yes	On Plan or Spec Date		

##### 10.1.4.2 Create Payment Method

Create a payment method and connect above above-enabled payment format using standard processes, read more in IFS Cloud documentation.

#### 10.1.4.3 Connect Payment Method

Once the payment method is created connect the payment method to the following pages. This is IFS standard functionality and refer IFS Cloud Documentation for more information.

##### 1. Payment methods per institute

Go to the *Payment Institutes* page and select the Payment institute to which you want to connect the above-created payment method. Then click on the command button **Payment Methods per Institute**. Connect the payment method to the payment institute via a new record.

Payment Method	Bank Transaction Code	Server Output File Directory	Server Output File Directory, History	Output File Name
RIBA - RIBA	* - IFS Bank Transaction Code			RIBA

##### 2. Customer Payment Methods

Connected the payment method RIBA to customers from payment method sub tab on the **Customer/ Payment** page.

Customer	Name	Association No
IT CUS-1	Italian Customer-1	112233IT

Payment Method	Default
RIBA - RIBA	No

#### 10.1.4.4 Define ABI and CAB Code

The ABI codes identify the bank and CAB codes identify the bank's branches. These two codes together represent the payment address identity. The payment address identity can be defined in the **electronic payment addresses** page via the Address ID column (first 5 digits denote ABI code and the last 5 digits denote CAB code). If used for one-time customer payments, then the payment address identity should be entered in customer's address ID field.

#### 10.1.4.5 Connect ABI and CAB Code to Customer

On the *Customer/Payment/Payment Methods* tab select the RIBA payment method and click on the command button **Electronic Payment Addresses**. Then specify a new record setting up the ABI and CAB codes in the address ID column as mentioned above and other necessary details.

	Payment Method	Address ID	Description	Account	Default	Blocked for Use	Address	Locality
(1)	RIBA	0123456789	Test	NO9386011117947	Yes	No		

#### 10.1.4.6 Competitive Tender Codes Per Payment Address

While on the **electronic payment addresses** page of the customer under the RIBA payment method, select the address line defined in the above step and click on the downward arrowhead to enter the **Competitive Tender Codes** via the nested list. This nested list option is only enabled for payment methods related to the RIBA payment format. Enter information such as CIG and CUP codes, which is provided by the government, and save. A customer can be connected to several competitive tender codes.

	Payment Method	Address ID	Description	Account	Default	Blocked for Use	Address	Locality
(1)	RIBA	0123456789	Test	NO9386011117947	Yes	No		

COMPETITIVE TENDER CODES			
	CIG Code	CUP Code	Default
(1)	7890	1234	Yes

#### 10.1.4.7 Payment Terms

In the **Payment Term** page create a new payment term. Connect the payment method created above.

A new **Collective RIBA** toggle is added to the **Payment Term** Page. If this toggle is set to YES position, a single payment document will be created for invoice installments. If this is set to NO position, then separate payment documents will be created per invoice installment. This involves creating separate payment documents even for installments with the same due date and the customer.

## 10.1.5 CREATE CUSTOMER PAYMENT

### 10.1.5.1 Create Customer invoice

Create a customer invoice using standard functionality. Make sure to use a customer who uses payment method RIBA. Use payment term created above in the invoice.

Payment method and CIG CUP codes marked as default are fetched to the customer invoice installment. CIG CUP codes can be changed using the drop-down list in the *Installment Plan and Discounts modal assistant*.

## 10.2 Payment Format - Bonifico Foreign

### 10.2.1 OVERVIEW LEGAL REQUIREMENT

The payment format BONIFICO FOREIGN (BON) is a common payment format in Italy to make bank transfers to foreign suppliers. The format contains all information required for the electronic files that has to be sent to Italian banks.

### 10.2.2 PROCESS OVERVIEW

The overall structure of the functionality is as follows:

### 10.2.3 PREREQUISITES

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter and the “Italian Payment Formats” localization functionality must be enabled.

### 10.2.4 BASIC DATA

#### 10.2.4.1 Payment Formats Per Company

Payment format BONIFICO FOREIGN is added to the **Payment Formats per Company** page. Select the **Connect to Company** command button from the header to enable this payment format.

Financials > Payment Basic Data > Cash Book > Payment Formats per Company

Company: DJ-Italy

# Payment Formats per Company

Connect to Company

Payment Formats

(1)	Payment Format ID	Format Description	Used in Company	Allowed Currencies	Payment Party Type	Input/Output Type	Repeatable Output	Format Instruction	Incoming File Template	Outgoing File Template	Payment Advice as a Single Print Job	Generate Payment Advice	Allow Negative Amount	Allow Zero Amount	Use as Customer Repayment

BONIFICO - Bonifico Foreign	No

**Electronic Payment Address**

Payment Method	Address ID	Description	Bank Account	BIC/Swift Code	Default
BONIFICO	54232198765	Bank	NO9386011...		Yes

**BONIFICO Payment Addresses - IT SUP-1**

Payment Method	Address ID	Description	Account	Default	Blocked for Use	Address	Locality	Province	Zip Code	Data6	UIC Code
BONIFICO	54232198765	Bank	NO9386011117947	Yes	No	Address 01	Local 01	Province 01	65565	DNBANNOKXXXX	31

Enter the following:

- **Address ID** - This consists of the ABI and CAB codes. Need to be entered manually. The entered value would be split as ABI (first 5 digits) and CAB code (last 5 digits) automatically when above codes are required.
- **Description** - Name of the bank. Need to be entered manually.
- **Account Number** - This is a mandatory field and should contain the IBAN number of the bank of the supplier. The IBAN number is validated based on the country specific rules.
- **Address, Locality, Province and Zip Code** – These are optional data fields and can be added manually.
- **UIC Code** – A code that identifies the country of the supplier according to the UIC table and that should be inserted by using the drop-down list. This is mandatory to save the address.
- **Data 6** - Enter the BIC code of the supplier's bank if used.

#### 10.2.5.5 Cash Accounts

In the **Cash Accounts** page select the specific cash account needed and define:

- **Account Number** - Company's IBAN Number
- **Institute Code** - ABI code of the bank
- **Office Code** - CAB code of the bank associated to the cash account

#### 10.2.6 CREATE PAYMENT FILE

Use standard functionality for automatic supplier payment to extract the electronic file BONIFICO FOREIGN. The required information will be included in the payment file and stored in the location that you specify through the pop-up dialog that appears when the file is being generated. Then the file can be sent to the bank.

#### 10.2.7 PAYMENT ADVICE

If the **Payment Advice** is selected for the supplier, the standard report will include the IBAN number from BONIFICO FOREIGN as Payment Address.

The screenshot displays the 'Payment' configuration page in the IFS system. The page is titled 'Payment' and shows details for 'IT SUP-1 - IT Supplier-1 Foreign'. The 'Company' is set to 'DJ-ITALY - DJ- Italy'. The 'Payee Identity' is '1 - Default Template'. The 'Interest Template' is '1 - Default Template'. The 'Payment Priority' is '1'. The 'Confirmation Status' is 'Netting Allowed'. The 'Blocked For Payment' is 'One Invoice/Prepaym...'. The 'Payment Advice' dropdown menu is open, showing 'At Create O...'. The 'AP Supplier Contact' table is empty. The 'PAYMENT METHODS' section shows a list of payment methods: 'CHK - Check', 'SEPA - SEPA', and 'BONIFICO - Bonifico Foreign'. The 'BONIFICO - Bonifico Foreign' method is highlighted.

## 10.2.8 DELIMITATIONS

None.

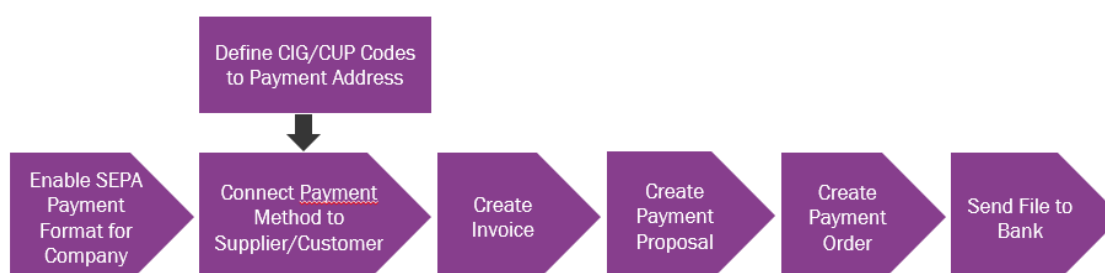

## 10.3 Payment Format - SEPA

### 10.3.1 OVERVIEW LEGAL REQUIREMENT

In Italy, the government issues CIG and CUP codes to identify contracts or assignments relating to public investments. These codes help the government to simplify the administrative activities and track the financial data of such public contracts, in an easy and effective manner.

According to the Italian anti-mafia law all bank transfers/payment related to a public contract must contain information about the CIG and CUP codes assigned.

### 10.3.2 PROCESS OVERVIEW

### 10.3.3 PREREQUISITES

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Italian Payment Formats” localization functionality must be enabled.

Application Base Setup > Enterprise > Company > Company > Localization Control Center

<input type="checkbox"/> Warehouse Journal Re...	Enables the collection of data for the warehouse journal report, according to the Italian legal requirements.	Yes	Yes

### 10.3.4 DEFINE BASIC DATA

- Enable SEPA, SEPADB, SEPADD payment format for the company
- Define payment method and connect it to the new payment format
- Define information in the tab *Mandate Specific Info* for SEPADB and SEPADD
- Connect the payment method to supplier/customer
- Add CIG/CUP codes to the **Electronic Payment Address** page for both Customer and Supplier

#### 10.3.4.1 Enable SEPA, SEPADB, SEPADD payment format for the company

To utilize these payment formats, they need to be enabled for the company. This is done via **Payment Formats per Company** page by selecting the **Connect to Company** command button on each specific payment format ID.

Financials > Payment Basic Data > Cash Book > Payment Formats per Company

**Payment Formats per Company** Company: DJ-Italy

[Connect to Company](#) [Payment Formats](#)

Payment Format ID	Format Description	Used in Company	Allowed Currencies	Payment Party Type	Input/Output Type	Repeatable Output	Format Instruction	Incoming File Template	Outgoing File Template	Payment Advice as a Single Print Job	Generate Payment Advice	Allow Negative Amount	Allow Zero Amount	Use as Customer Repayment
SEPA	Single Euro Payment	Yes	EUR	Supplier	XML	Yes	On Plan or Spec Date			No	Yes	No	No	Yes
SEPADB	SEPA B2B Direct Debit	No	EUR	Customer	XML	Yes	On Plan or Spec Date			No	Yes	No	No	No
SEPADD	SEPA Core Direct Debit	No	EUR	Customer	XML	Yes	On Plan or Spec Date			No	Yes	No	No	No
SEPADDCCO...	SEPA Core1 Direct Debit	No	EUR	Customer	XML	Yes	On Plan or Spec Date			No	Yes	No	No	No

#### 10.3.4.2 Define Payment Method and Connect it to the New Payment Format

Define new payment methods connecting the methods to the payment formats SEPA, SEPADD and SEPADB via the drop-down list from the Format ID column. Once you save the created method verify that the **Generate Trace Information** toggle is set to “Yes” for the payment method.

Financials > Payment Basic Data > Cash Book > Payment Methods

**Payment Methods** Company: DJ-Italy

[Payment Method: SEPA](#) [Description](#) [Format ID](#) [More](#) [Favorites](#) [Clear](#) [Q](#) [Settings](#)

Payment Method	Description	Format ID	Trace Information	Cash Account in Any Currency
SEPA - Single Euro Payment	SEPA	SEPA	Yes	No
SEPADB - SEPA B2B Direct Debit	SEPADB	SEPADB	Yes	No
SEPADD - SEPA Core Direct Debit	SEPADD	SEPADD	Yes	No

#### 10.3.4.3 Define Information in the Mandate Specific Info for SEPADB and SEPADD

In the **Payment Formats per Company** page select the payment format and select the command button **Mandate Specific Details**. Define information on the *Mandate Specific Details* modal dialogue. This information is mandatory for SEPADB and SEPADD, but not applicable for SEPA.

The modal dialog titled "Mandate Specific Details" contains two input fields: "Last Automatic Mandate Number" with the value "100" and "Suffix Mandate reference" with the value "MM". At the bottom are "OK" and "Cancel" buttons.

#### 10.3.4.4 Connect Payment Methods to a Payment Institute

Go to **Payment Institutes** page and select an existing payment institute or create a new payment institute. Next select the selected payment institute and click on the command button **Payment Methods per Institute**. Add the payment methods SEPA, SEPADB and SEPADD to the **Payment Methods per Institute** page.

The screenshot shows the "Payment Methods per Institute" page for "BANK - Bank". A table lists various payment methods. The "Format Specific Information per Institute" button is highlighted. The table includes columns for Payment Method, Bank Transaction Code, and Output File Name. The rows for SEPA, SEPADB, and SEPADD are highlighted with a red box.

(1)	Payment Method	Bank Transaction Code	Server Output File Directory	Server Output File Directory, History	Output File Name
<input type="checkbox"/>	BONIFICO - Bonifico Foreign Italy	* - IFS Bank Transaction Code			Bonifico
<input type="checkbox"/>	CHK - Check	* - IFS Bank Transaction Code			
<input type="checkbox"/>	EZEUR - Direct Debiting EZ	* - IFS Bank Transaction Code			
<input type="checkbox"/>	LCRBOE - LCR Bill Of Exchange	* - IFS Bank Transaction Code			
<input type="checkbox"/>	SEPA - SEPA	* - IFS Bank Transaction Code			
<input checked="" type="checkbox"/>	SEPADB - SEPADB	* - IFS Bank Transaction Code			SEPADB
<input type="checkbox"/>	SEPADD - SEPADD	* - IFS Bank Transaction Code			SEPADD
<input type="checkbox"/>	SUPBOE - Supplier Bill Of Exchange	* - IFS Bank Transaction Code			

In the **Payment Methods per Institute** page select the payment method and click on the command button **Format Specific Information per Institute** to define Payment format and file template. Use the drop-down list of values. For SEPADB and SEPADD, **Creditor Identifier** needs to be entered as well.

The screenshot shows the "Format Specific Information per Institute - BANK - SEPA" page. It contains fields for Format ID (SEPA), File Template (IT - 00.04.00), Identification (GEBAADE6), Private Identification (toggle), AOS2 (toggle), Batch Booking (toggle), and Regulatory Reporting (toggle).

Financials > Payment Basic Data > Cash Book > Payment Institutes > Payment Methods per Institute > Format Specific Information per Institute - BANK - SEPADB

Company: DJ- Italy

### Format Specific Information per Institute - BANK - SEPADB

Format ID: SEPADB  
File Template: IT - 00.01.00  
Creditor Identifier: IT67ZZZ0000013188440153

Identification: GEBAADE6  
Private Identification: ☐  
Finance Direct Debit Spain: ☐

Define the correct Payment Methods for customers in the **Mandate Management** page. Note that the information in the **Mandate Reference** column would be the same when connecting payment methods to customers. Enter the specific IBAN code for the customer. Select the specific BIC code from list of values. Using the **Change Status** command button change the status of the mandate to Used state.

This process is the same for SEPADB and SEPADD.

Financials > Accounts Receivable > Customer Payment Proposal > Mandate Management

Company: DJ- Italy

### Mandate Management

Change Status New Mandates

#### 10.3.4.5 Connect the Payment Method to Supplier/Customer

Connect the payment format to Supplier/Customer

Application Base Setup > Enterprise > Supplier > Supplier > Payment

Supplier: IT SUP-1 Name: IT Supplier-1 Foreign Association No: 123455

Company: DJ-ITALY - DJ- Italy

Payee Identity: 1 - Default Template Interest Template: 1 - Default Template Payment Advice: No Advice

Payment Priority: 1 Confirmation Statement: ☐ Netting Allowed: ☐ Blocked For Payment: ☐ One Invoice/Prepayment: ☐

AP Supplier Contact: Name: Comm. Method: Value: Output Media: Printout

PAYMENT METHODS

Rule ID: Check Recipient: Payee Use Default Payment Method for L: ☐

Payment Method

Electronic Payment Addresses Set Default

Payment Method	Default
CHK - Check	Yes
SEPA - SEPA	No
BONIRICO - Bonifico Foreign Italy	No

#### 10.3.4.6 Add CIG/CUP Codes to the Electronic Payment Address page

In the **Electronic Payment Addresses** page enter the bank address data and BIC/Swift code. After entering the bank address and the BIC/SWIFT code click on the drop-down arrow and expand the nested list to add the CIG and CUP codes.

Application Base Setup > Enterprise > Supplier > Supplier > Payment > SEPA Payment Addresses - IT SUP-1

Company: DJ-Italy

### SEPA Payment Addresses - IT SUP-1

	Payment Method	Address ID	Description	Account	Default	Blocked for Use	BIC/Swift Code	Account Owner	High Priority Payment
<input checked="" type="checkbox"/>	SEPA	1	1	IT05h05584016240000...	Yes	No	BCTITMM530		No

Application Base Setup > Enterprise > Supplier > Supplier > Payment > SEPA Payment Addresses - IT SUP-1

Company: DJ-Italy

### SEPA Payment Addresses - IT SUP-1

	Payment Method	Address ID	Description	Account	Default	Blocked for Use	BIC/Swift Code	Account Owner	High Priority Payment
<input checked="" type="checkbox"/>	SEPA	1	1	IT05h05584016240000...	Yes	No	BCTITMM530		No

**COMPETITIVE TENDER CODES**

	OIG Code	CUP Code	Default
<input checked="" type="checkbox"/>	22334455ee	123456789uu5678	No
<input type="checkbox"/>	4444	5555	No
<input type="checkbox"/>	4433	5566	Yes

It is now possible to specify CIG/CUP codes on supplier/customer installments for payment methods connected to payment formats SEPA, SEPADB, SEPADD. CIG/CUP codes are editable for SEPA payment formats in the **Customer/Supplier Installment Plan** in the **Manual Customer Invoice** page and in the **Installment Plan and Discounts** modal assistant opened from the **Manual Supplier Invoice and Instant Invoice** page.

The default CIG/CUP codes from electronic payment address are set automatically on installments of customer order invoice, instant invoice and manual supplier invoice. This is done when payment method connected to SEPA/SEPADD/SEPADB formats is defined on payment term details. This is the same function as for BONIFICO and RIBA payment formats.

### Installment Plan and Discounts

### 10.3.5 CHANGES TO CUSTOMER INVOICES

When creating one of the following invoices, the system fetches the CIG/CUP codes from the payment address to invoice installment plan and discount as default.

- Instant Customer Invoice
- Recurring Instant Invoice
- Correction Instant Customer Invoice
- Manual Customer Invoice
- Advance Customer Order Debit Invoice
- Advance Customer Order Credit Invoice
- Prepayment Based Debit Invoice
- Prepayment Based Credit Invoice
- Customer Order Correction Invoice
- Customer Order Collective Correction Invoice
- Rebate Invoice
- Project Correction Invoice
- Project Credit Invoice
- Customer Order Invoice, Debit
- Customer Order Invoice, Credit
- Customer Order Collective Invoice, Debit
- Customer Order Collective Invoice, Credit
- Project Invoice
- Customer Order Self-Billing Invoice, Debit
- Customer Order Self-Billing Invoice, Credit
- External Customer Invoice
- Customer Difference Item
- Interest Customer Invoice

### 10.3.6 SEPA PAYMENT

Connect the payment method SEPA to suppliers on the **Supplier/Payment** page. Select the payment method SEPA and click on the command button **Electronic Payment Addresses** to open the **SEPA Payment Addresses** page.

1. Create a supplier invoice and save.
2. Go to *Installment Plan and Discounts*, enter payment method with SEPA format and enter CIG/CUP code on the installment. If the “Use Default Payment Method for Installments” is enabled on the supplier, the CIG/CUP codes are automatically added. Authorize installment for payment.
3. Generate payment proposal with supplier invoice included and acknowledge it.
4. Create payment order. Use payment method, payment institute, cash account created earlier. Go to the out folder and verify XML file created. Look for <Ustrd> tag and see whether invoice number and CIG/CUP codes are correct.

### 10.3.7 SEPADB/SEPADD

The process is the same for SEPADB and SEPADD.

1. Create a customer invoice and save.
2. Go to installment, enter payment method created earlier and enter CIG/CUP code on installment. If the “Use Default Payment Method for Installments” is enabled on the customer, the CIG/CUP codes are automatically added.
3. Generate customer payment proposal with customer invoice included with and acknowledge it.
4. Create direct debiting payment order. Use payment method, payment institute, cash account created earlier. Go to the out folder and verify XML file. Look for <Ustrd> tag and see whether invoice number and CIG/CUP codes are correct.

### 10.3.8 INSTALLMENT PLAN ON THE INVOICE

It is a requirement in Italy to print the installment plan on the invoice, with the Italian specific CIG and CUP codes.

When the “Italian Payment Format” parameter is enabled for the company, then the installment plan is always added to the RDF of the invoices listed below, even if the Installment Plan only contains one installment:

- Customer Order Invoice
- Customer Order Collective Invoice
- Instant Invoice
- Project Invoice
- Proforma Invoice
- Shipment Proforma Invoice

### 10.3.9 DELIMITATIONS

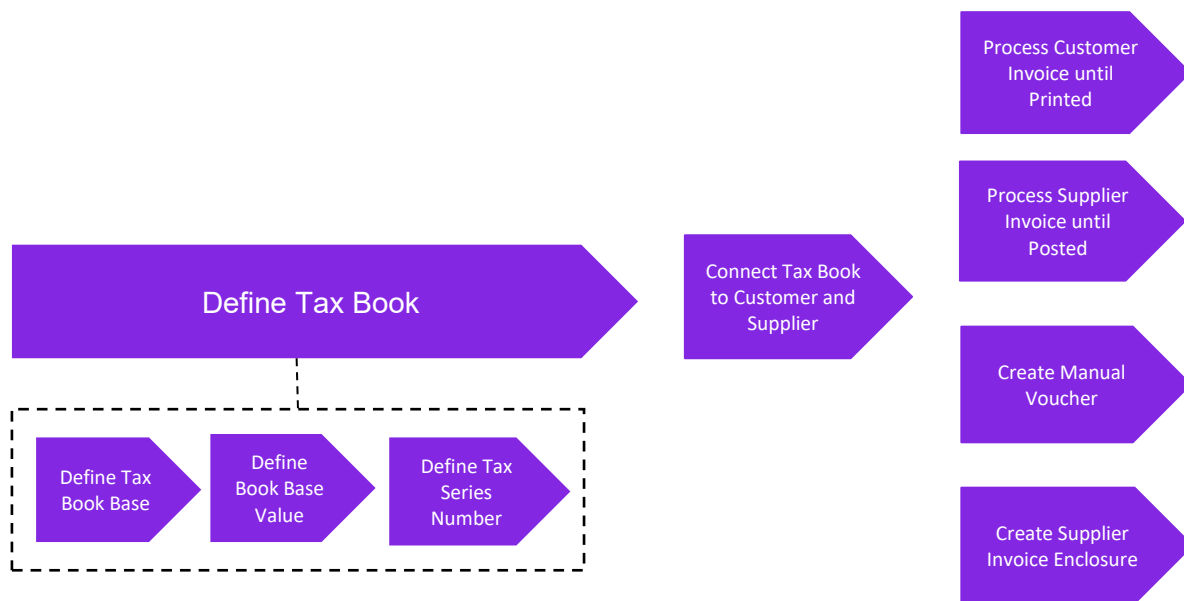

- CIG/CUP codes are not applied to customer order.
- CIG/CUP codes are not applied to project.

Additional delimitations may apply; all relevant flows should be tested to ensure completeness.

## 11 Enhanced Tax Books Handling Using Invoice Type and Series

### 11.1 Overview Legal Requirement

The Italian tax authorities requires tax transactions to be numbered with a tax series number series per invoice ID when reporting tax. This number must be progressive according to the tax liability date. Supplier invoice enclosure is a legal requirement in Italy and the EU. The printout of supplier invoice enclosure needs to include tax series id and tax series no.

### 11.2 Process Overview

The tax books and tax series numbers are used in the following reports:

- Sales Tax Book
- Purchase Tax Book
- Corrispettivi
- Tax Summarized Report
- Quarterly VAT Liquidation and
- Spesometro Declaration

### 11.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set-Up chapter](#). The localization functionality “Enhanced Tax Books Handling Using Invoice Type and Series” must be enabled.

### 11.4 Allocate Tax Book on Fetch

The *Allocate Tax Book On Fetch* parameter in the *Financials/Tax Ledger/Basic Data/Tax Ledger Parameters* page defines when tax numbering is fetched to the transaction.

- When it is not selected, tax numbering is done in the moments of the posting of the supplier invoice or at the printout of customer invoice or at the posting of payments or manual vouchers.
  - When it is selected, the numbering takes place during a fetch of tax ledger information.
- The *Allocate Tax Book On Fetch* is by default not selected for the Italian localization.

The screenshot shows the 'Tax Ledger Parameters' configuration page. The page is divided into several sections:

- Tax Transactions:**
  - Delete Tax Transactions with Status False: ☒
  - Tax Base Calculation for Non-deductible Transactions: Reduced
- Tax Proposal:**
  - Include Cancelled Invoices: ☒
  - Allocate Tax Book On Fetch: ☐ (highlighted with a red box)
  - Allow Delete on Replacement Proposal: ☒
  - Output File Directory: (empty)
- Modify Tax Transactions:**
  - Allow Change of Tax Number: ☒
  - Allow Change of Tax Liability Date: ☐
  - Allow Change of Tax Code: ☐
  - Allow Change of Delivery Type: ☐
  - Allow Change of Tax Direction: ☐
  - Allow Change of Income Type: ☐
  - Allow Change of Income Amount: ☐
  - Allow Update of Legal Identity: ☐

## 11.5 Define Tax Book

Create new tax books in the **Tax Books** page. Two new columns are added:

- **Book Base** – This is a control type to determine what tax transactions goes into the specific tax book. The following options are available:
  - “Invoice Type”. This means that only the tax transactions of the selected invoice types will be updated with tax number.
  - “Tax Code”. This means that only the selected tax code will be updated with tax number.
  - “Invoice Series”. This means that only the tax transactions of the selected invoice series will be updated with tax number.
- **Book Base Value** – The following available options are:
  - “All”. This means that all values for tax codes or invoice types will be updated with tax number.
  - “Restricted”. This means that only defined values for either tax codes or invoice types will be updated with tax number.

Accounting Rules > Tax > Tax Books Company IT1

### Tax Books

	Tax Book ID	Tax Book Description	Tax Direction	Tax Book Base	Tax Book Base Values	Tax Series ID
<input type="checkbox"/>	CS	Cash Sales	Disbursed	Invoice Type	Restricted	SAL
<input type="checkbox"/>	PURCH	Purchase	Received	Invoice Series	Restricted	PUR
<input type="checkbox"/>	SALES	Sales	Disbursed	Tax Code	Restricted	SAL

#### Note:

- It is recommended to use “Invoice Series” as the book base for tax books connected to invoices and “Tax Code” as the book base for payments.
- It is recommended to use different set of tax codes for Payments and different set of tax codes for Invoices.
- The same tax code can be used in invoices as well as in payments.
- Using the same tax code in Payments and Invoices could create conflict in tax reports. Therefore, use separate tax codes payment and invoice transactions. See the example below:

Tax Book	Book Base	Tax Code Per Book	Invoice Series Per Book
Payment	Tax Code	T1;T2	
Sales	Invoice Series		II;CI;CD
Purchase	Invoice Series		SI;SX

#### 11.5.1 TAX BOOK BASE

When “Tax Code” is selected as book base, you must define the tax codes that should be included for this tax book.

Select the tax book with *Tax Book Base* “Tax Code” and click on the command *Tax Code Per Tax Book* to enter the restricted tax codes.

Accounting Rules > Tax > Tax Books > Tax Code Per Tax Book Company IT1

### Tax Code Per Tax Book SALES - Sales

Tax Code
<input type="checkbox"/> 1 - Tax with no reduction 25%
<input type="checkbox"/> 2 - Tax with reduction 1, 12%
<input type="checkbox"/> 3 - Tax with reduction 2, 6%

For “Invoice Type” selected as book base, you must define the invoice types that should be included for this tax book.

Select the tax book with *Tax Book Base* “Invoice Types” and click on the command *Invoice Types Per Tax Book* to enter the restricted Invoice Types.

For “Invoice Series” selected as book base, you must define the invoice series that should be included for this tax book.

Select the tax book with *Tax Book Base* “Invoice Series” and click on the command *Invoice Series Per Tax Book* to enter the restricted Invoice Series.

### 11.5.2 TAX SERIES ID AND TAX SERIES NUMBER

Create a new **Tax Series ID** in the **Tax Series** page for each tax book and add a **Tax Series Number** for each id. (Applications standard process)

### 11.5.3 CONNECT TAX BOOK TO CUSTOMER AND SUPPLIER

After the tax books are defined, connect them respectively to the customer and supplier. For the **Tax Book Ref** field on the *Customer/Address/Delivery Tax Information* tab. List of values provides all the tax books with the Disbursed set for **Tax Direction**.

Application Base Setup > Enterprise > Customer > Customer > Address

## 11.6 Process Customer Invoice With Tax Number

Create a customer invoice, read more in IFS Cloud Documentation. When a customer invoice is printed (customer order invoices and instant invoices), the tax book information is fetched and stored on the invoice. Tax book ID, tax series ID and tax series number are updated to the tax transaction when updating the voucher to general ledger. This information is available in the **Tax Transaction** page and when creating Italian tax reports. Use the table view settings to enable the tax books columns.

Financials > Tax Ledger > Tax Transactions

### Tax Transactions

Calculate Income Amount

✓	:	Trans Code	Account	Tax Trans ID	Identity	Party Type	Tax ID Number	Series ID	Invoice No	Invoice Type	Tax Code	Tax Book Id	Tax Series ID	Tax Series Number	Reference Ser
<input type="checkbox"/>	:	IP4	2611	200592	SE ABC001 - So...	Customer	ABCTAX001	CD	970000006	CUSTORDDEB	1	CASH SALES	A1	100007	
<input type="checkbox"/>	:	IP4	2611	200709	SE ABC001 - So...	Customer	ABCTAX001	CD	970000007	CUSTORDDEB	1	CASH SALES	A1	100008	
<input type="checkbox"/>	:	IP4	2621	200710	SE ABC001 - So...	Customer	ABCTAX001	CD	970000007	CUSTORDDEB	2	CASH SALES	A1	100009	

### Note:

If the invoice lines contain tax codes that are attached to different tax books, an error message will be prompted when the invoice is printed. In case of the split payment invoices, there will be one tax book for VAT postings and another one for withholding tax postings (as withholding tax is used to reverse VAT in split payment). The general rule is that only one combination of tax book ID, tax series ID and tax series number per tax direction is allowed for the invoice.

## 11.7 Process supplier invoice with Tax numbering

Create a supplier invoice, read more in IFS Cloud Documentation. When the supplier invoice is posted, the tax book information is fetched and Tax Book ID, Tax Series ID and Tax Series Number are updated on the supplier invoice line.

Financials > Supplier Invoice > Manual Supplier Invoice

### Manual Supplier Invoice SI - 2001021539 1 of 1

-80,00	-80,00	All About Green

Tax book ID, tax series ID and tax series number are updated to the tax transaction when updating the voucher to general ledger. This information is available in the **Tax Transaction** page and when creating Italian tax reports.

#### Note:

When there is no reference to a tax book on the *Customer/Address/Delivery Tax Information/Supply Country* or *Supplier/Invoice/Tax Information* tabs, an error message will be displayed.

If there is a conflict between tax books, i.e. the tax code as a book base is included in one tax book and the invoice type or invoice series as a book base is included in another which is connected to the customer, then the system reaches for the tax book for which the tax code is selected as a book base regardless the connection between the customer and the tax book. (The tax book connected with the customer may not be the same as the tax book with the tax code as a book base).

If no tax series id or tax series number is defined for a tax book, and these fields are left blank and an error message will be displayed.

If the invoice lines contain tax codes that are attached to different tax books, an error message will be prompted when the invoice is posted. The general rule is that only one combination of tax book ID, tax series ID and tax series number per tax direction is allowed for the invoice.

## 11.8 Payment Voucher

Create a payment transaction including a tax code, read more in IFS Cloud Documentation. When a payment voucher is updated to general ledger, tax book ID, tax series ID and tax series number are updated to the tax transaction. This information is available when creating Italian tax reports.

## 11.9 Manual Voucher

Create a manual voucher including a tax code, read more in IFS Cloud Documentation. When the manual voucher is updated to general ledger, tax book ID, tax series ID and tax series number are updated to the tax transaction. This information is available when creating Italian tax reports.

## 11.10 Supplier Invoice Enclosure

Tax series id and tax series number for both the disbursed and received tax direction is included in the **Invoice Enclosure – EU Taxes** report. See the IFS Cloud Documentation for how to print the report.

The values are presented in the RDF-file and it looks like this:

```
<TAX_PERCENTAGE>25</TAX_PERCENTAGE>
<DELIVERY_TYPE>IT-MS</DELIVERY_TYPE>

## 11.11 Delimitations

Enhanced Tax Book Handling Using Invoice Types and Series is not designed to work with Tax Books Structures.

Additional delimitations may apply; all relevant flows should be tested to ensure completeness.

## 12 Italian Tax Reports

### 12.1 Purchase Tax Book , Sales Tax Book , Corrispettivi & Tax Summarized Report

#### 12.1.1 OVERVIEW LEGAL REQUIREMENT

Italian companies are obliged to provide a number of VAT reports to the tax authorities. There are several different VAT reports that must be printed and supplied by the company, for example:

- Purchase Tax Book: To monthly report VAT transactions related to purchases
- Sales Tax Book: To monthly report VAT transactions related to sales.
- Corrispettivi (Cash Book Register): To monthly report VAT transactions not related to sales/customer invoices, e.g. sales to employees or for the companies that work on the retail.
- Tax Summarized Report: To monthly report a summary of data from several tax books.

The Italian tax authorities requires tax transactions that are included in the reports to be numbered with a tax series number series per invoice ID when reporting tax. This number must be progressive according to the tax liability date. Read more about this in the Tax Book Tax Numbering chapter.

#### 12.1.2 PROCESS OVERVIEW

#### 12.1.3 PREREQUISITES

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter, and the “Enhanced Tax Books Handling Using Invoice Type and Series” and “Italian Tax Reports” localization parameters must be enabled.

Tax books, tax series and tax number series must be defined as described in chapter “Enhanced Tax Books Handling Using Invoice Type and Series”.

#### 12.1.4 DEFINE TAX REPORT BASIC DATA

In order to create Italian Tax Reports, following basic data is required.

1. Define opening balance in **Tax Summarized History** page.
2. Define **Tax Reports**
3. Connect Tax Books to Tax Reports

##### 12.1.4.1 Define Opening Balance In Tax Summarized History

The page **Tax Summarized History** contains, per calendar period, summarized tax information and this information is used by the “*Quarterly Tax Liquidation Report*”. Enter the initial open balances manually before printing the report for the first time. If needed for the “Quarterly Tax Liquidation” report, opening balances for the last quarter should be added.

Financials > Financial e-Reporting > Tax History > Tax Summarized History

Company: Italian Company

### Tax Summarized History

	From Calendar Year	From Calendar Period	To Calendar Year	To Calendar Period	Total Net Amount Sales	Total Tax Amount Sales	Total Net Amount Purchase	Total Tax Amount Purchase	Total Purchase Tax Amount Deductible	Total Intra EEC Sales	Total Intra EEC Purchase	Total Tax Amount in Acc. #### 12.1.4.2 Define Tax Reports

Four tax templates have been defined for the Italian tax reporting. The reports are created from the **Tax Reports** page and following tax templates are available:

- GIT001-Italy, Purchase Tax Book
- GIT002-Italy, Sales Tax Book
- GIT003-Italy, Corrispettivi Tax Book
- GIT004-Italy, Tax Summarized Report

Select the appropriate Tax Template for the Tax Reports.

Financials > Tax Ledger > Tax Report

Company: IT3CMP

### Tax Report

Report No: GIT001 - Purch TaxBook

Tax Template: **GIT001 - Italy, Purchase Tax Book**

Tax Group: Tax Direction: Received

Report Based on: Obsolete Tax Te...  
Tax Transac...: No

Output Method: External File Template  
Paper

Tax Report Layout ID: XML Layout ID  
TaxBookPurchRep.rdl

Additional Parameters:

Sub Gro...	Vouche...	Based on Single Period	1

Correction Type: Replacement Report

Reporting Currency: Reporting Currency Base: Accounting Currency: EUR

Currency Rate Type:

Tax Reports can be defined based on accounting periods or based on dates

- If you want to define tax report based on single accounting period, select “Based on Single Period” in the **Proposal Period/Date Range** field.
- If you want to define tax report based on one or more accounting periods, select “Based on Periods” in the **Proposal Period/Date Range** field.
- If you want to define tax report based on dates, select “Based on Dates” in the **Proposal Period/Date Range** field.

#### 12.1.4.3 Connect Tax Books to Tax Reports

The Italian tax reporting is based on the Tax Books that have been defined for the company. Connect the relevant **Tax Books** to the tax report. E.g. connect all the sales tax books to the Italian Sales Tax Book Report.

Financials > Tax Ledger > Tax Report Company IT3CMP

Total					6,000.00	1,320.00
TOTAL FOR THE PERIOD					-26,240.00	-11,436.00

## 12.1.6 SETUP FOR SCENARIO WITH ACCOUNTING PERIODS DIFFERENT THAN CALENDAR PERIODS

In Italy, VAT reporting always relates to calendar periods. In case accounting periods are shifted compared to calendar periods (for example: April 2020 is the first accounting period, May 2020 is the second accounting period etc.) the following needs to be considered

- Tax proposals for template GIT004 should be prepared according to standard functionality, that is, they can either be defined with respect to periods and run per accounting period or they can be defined per selected dates (first and last day of the month). Example: Proposal for tax/accounting period 2020 - 01 is used to create a report for April 2020.
- When tax proposal is printed as definitive, a new entry in the **Tax Summarized History** page is created for calendar period. Example: When the proposal for tax/accounting period 2020 - 01 is printed as definitive, the **Tax Summarized History** page is updated with data for calendar period 2020 - 04 (April 2020).

## 12.1.7 DELIMITATIONS

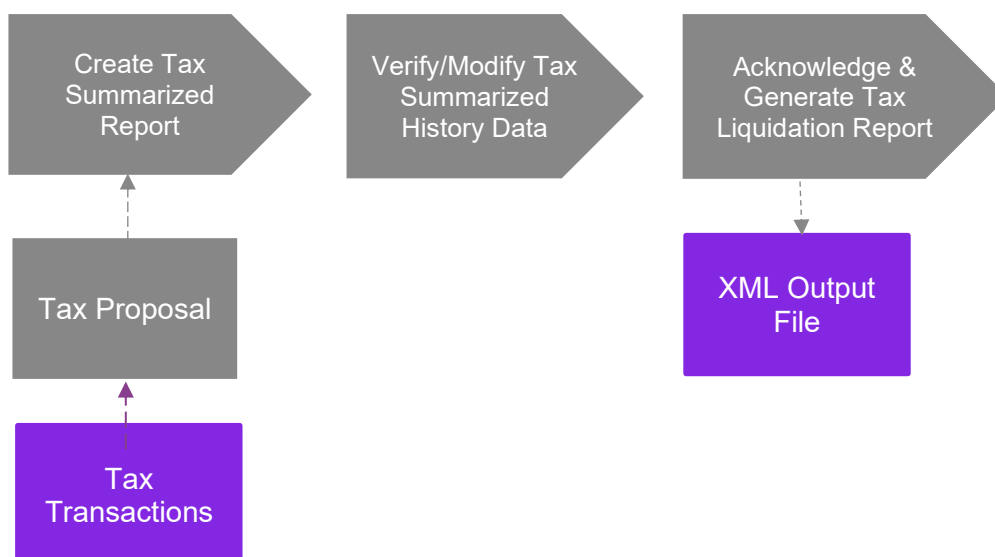

- This functionality is not applied to Tax Books Structures.
- This functionality is only supported when accounting periods are the same as calendar periods or accounting periods are shifted, that is, one accounting period corresponds to exactly one calendar periods. Functionality is not supported in other scenarios, in particular, when accounting periods are defined as 4 and 5 weeks periods.

## 12.2 Quarterly Tax Liquidation

### 12.2.1 OVERVIEW LEGAL REQUIREMENT

Starting from January 2017, Italian companies are obliged to report VAT information on a quarterly basis to the tax authorities in .xml format. The report is called VAT Quarterly Liquidation.

### 12.2.2 PROCESS OVERVIEW

### 12.2.3 PREREQUISITES

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter and the 'Italian Tax Reports' parameter must be enabled.

To prepare required data, manually enter a data for the previous months of the current period/periods in the **Tax Summarized History** page to create an opening balance for the quarterly VAT Liquidation report (or automatically by printing the definitive tax summarized report with existing data). Read more on tax summarized report in the "Italian Tax Reports" chapter.

Example: if you start to generate quarterly tax liquidation report for the first time in the year and for transactions done in 6 period (second quarter), enter manually records for 4 and 5 periods belonging to the second quarter or even earlier data, since you can enter more than one record.

### 12.2.4 VERIFY TAX SUMMARIZED HISTORY DATA

The Quarterly Tax Liquidation Report is based on the summarized information in the **Tax Summarized History** page. It is therefore required to run the Italian Tax Reports for the periods to ensure that the **Tax Summarized History** page is updated.

In the **Tax Summarized History** page check the records for the quarter you want to report and add, if needed, values to editable fields:

- Tax Credit from Previous Year
- VAT from Sales of Cards bought in EU
- Additional Amount of Tax Received.

Financials > Financial e-Reporting > Tax History > Tax Summarized History

Company: Italian Company

### Tax Summarized History

	From Calendar Year	From Calendar Period	To Calendar Year	To Calendar Period	Total Net Amount Sales	Total Tax Amount Sales	Total Net Amount Purchase	Total Tax Amount Purchase	Total Purchase Tax Amount Deductible	Total Intra EEC Sales	Total Intra EEC Purchase	Total Tax Amount in Acc. Curr.	Original Total Tax Amount in Acc. Curr.	Tax Credit from Previous Year	Tax from Sales of Cars bought in EU	Additional Amount of Tax Received	Prepayment Amount
<input type="checkbox"/>	2021	1	2021	1	-1,000.00	-250.00	10,000.00	2,500.00	2,500.00	0.00	0.00	2,001.01	200,101.00				0.00
<input type="checkbox"/>	2021	2	2021	2	-1,000.00	-250.00	10,000.00	2,500.00	2,500.00	0.00	0.00	2,001.02	4,251.01				0.00
<input type="checkbox"/>	2021	3	2021	3	-1,000.00	-250.00	0.00	0.00	0.00	0.00	0.00	1,751.02					0.00

When the **Tax Summarized History** page is validated and updated, you can continue and generate the quarterly tax liquidation report.

### 12.2.5 GENERATE NEW QUARTERLY TAX LIQUIDATION - XML FILE

Open the **New Quarterly Tax Liquidation** page in the navigator and select the periods that you want to report from in the drop-down lists.

Financials > Financial e-Reporting > Tax History > New Quarterly Tax Liquidation

## New Quarterly Tax Liquidation

From Calendar Period  
2021-01

To Calendar Period

2021-01  
2021-02  
2021-03  
2021-04  
2021-05  
2021-06  
2021-07  
2021-08  
2021-09

Click **OK** to generate the report. For each calendar period selected in the range, a separate section with all respective data for each period will be created in XML. You can create XML report for unlimited times for the same periods. XML file will be saved on the server catalog defined by a system administrator.

This is the example of the Quarterly VAT Liquidation report.

Note that in Italy it's a legal obligation to present reports in Italian language, so names of the XML report tags are in Italian.

## 12.2.6 DELIMITATIONS

System does not validate a number of periods included in a single Quarterly VAT Liquidation report.

To meet the legal requirements, a data entered should reflect one quarter, which means three months. You select the respective period threshold manually when ordering a report.

## 12.3 Spesometro Declaration

### 12.3.1 OVERVIEW LEGAL REQUIREMENTS

The Italian government introduced a legal requirement from Article. 4, paragraph 1 of Decree Law n. 193/2016 on the 27th of March 2017 n. 58793 for the communication of the invoices issues and received which amends any Article. 21 of D.L. n. 78/2010 and substitutes the Annual Declaration of Spesometro.

Starting from 01.01.2019 the Spesometro report should only include foreign supplier invoices and the customer invoices which were not sent to SDI exchange system in electronic format. The report should be reported monthly and not quarterly.

### 12.3.2 PROCESS OVERVIEW

### 12.3.3 PREREQUISITES

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter and the 'Italian VAT Reports' parameter must be enabled.

- In **Tax Ledger Parameters** page, the **Delete Tax Transactions with status False** toggle should not be enabled.

### 12.3.4 BASIC DATA

#### 12.3.4.1 Define Fiscal Number For Company

Go to *Financials/Financial e-Reporting/Italian Reports Basic Data* and define the company fiscal number and fiscal number of compelled body.

Italian Reports Basic Data DJ-ITALY			
Fiscal No of Compelled Body	Fiscal No of Intermediary Body	Fiscal No	Fiscal Code of the Software Vendor
01080490327	15826	00104715578

#### 12.3.4.9 Settings on tax code

Go to **Tax Codes** page, select the tax code and click on the command button **Tax Texts per Tax Code**.

In the **Tax Texts per Tax Code** page, a new **Exclude from Spesometro Declaration** toggle is added.

Once this is toggle is turned ON, transactions which has used this tax code are excluded from the Spesometro Declaration.

In the **Tax Texts per Tax Code** page, a new **Nature of Operation** column is added.

Accounting Rules > Tax > Tax Codes > Tax Texts per Tax Code

### Tax Texts per Tax Code

✓	:	Tax Code	Tax Code Text	Valid From	Valid To	Nature of Operation	Exclude From Spesometro Declaration
<input type="checkbox"/>	:	0 - Tax 0%		01/01/2018	31/12/2049	N4 Exempt	<input checked="" type="checkbox"/> Yes

Use dropdown list and select the suitable nature operation for the tax code. This is the full list of the tax transactions types provided by the Italian tax authorities:

Accounting Rules > Tax > Tax Codes > Tax Texts per Tax Code

### Tax Texts per Tax Code

Cancel Edit

Tax Code	Tax Code Text	Valid From	Valid To	Nature of Operation	Exclude From Spesometro Declaration
0 - Tax 0%		01/01/2018	31/12/2049	N4 Exempt	<input checked="" type="checkbox"/>

Nature of Operation

- N1 Excluded According to Art 15
- N2 Not Subjected to Vat
- N3 Not Taxable
- N4 Exempt
- N5 Vat Not Printed on Invoice
- N6 Reverse Charge
- N7 Vat UE

#### 12.3.4.10 VAT Recoverability

In Italy SPLIT payment of tax is a mechanism used by public customers and for some specific category of private customers. When a customer invoice is printed with, for example a net amount 1,000 at normal tax rate of 22% and VAT amounting to 220; then total amount is not paid by the customer to the company as in ordinary cases (paying the gross amount of 1,220), but the tax amount is paid directly to the tax authorities instead of the company.

Following needs to be setup to facilitate SPLIT payment of tax via Spesometro Declaration:

- Go to the **Tax Codes** page, select the respective tax code and select the command button **Tax Texts per Tax Code**. Enter "SPLIT" in the **Tax Code Text** field.

Accounting Rules > Tax > Tax Codes > Tax Texts per Tax Code

### Tax Texts per Tax Code

✓	:	Tax Code	Tax Code Text	Valid From	Valid To	Nature of Operation	Exclude From Spesometro Declaration
<input type="checkbox"/>	:	2 - Tax with reduction	SPLIT	01/01/2018	31/12/2049		<input type="checkbox"/> No

- Go to Details section in the **Spesometro Declaration** page accessible under the **Spesometro Declaration** folder and observe the **Recoverable VAT** column:
  - Split tax invoices are marked with "S" in the **Recoverable VAT** column.

- For tax of payment type tax will be realized when the payment for the invoice is done. To reflect this, the tax transaction created with the invoice with tax type payment, will have the **Recoverable VAT** field set to “D”.

Once the invoice is paid, tax is realized and reflected in Spesometro with “I” type.

01/2018	EUR	11.79	98.21	11.79	98.21	N7	TD01	S		0	No	
01/2018	EUR	10.00	100.00	10.00	100.00	N7	TD01	D		0	No	
01/2018	EUR	25.00	100.00	25.00	100.00	N7	TD11	I		0	No	
01/2018	EUR	11.79	98.21	11.79	98.21	N7	TD11	S		0	No	

For all other VAT transactions, **Recoverable VAT** field is set as “I” since the tax is paid at time of posting the invoice.

#### 12.3.4.11 Document Type

As per the directives issue by the government, invoices issued and received must be categorized according the government's issued categorization. This categorization is referred as document type.

Document types are assigned to the invoices automatically when the Spesometro Declaration is created. These are predefined values and you cannot edit them once assigned to a given invoice. Following logic is used to assign the document type to invoice:

- All customer invoices should have document type “TD01” for invoices with positive values and “TD04” for invoices with negative values.
- For supplier invoice with positive amount, a document type is “TD01” if the Country of the document address of the supplier is Italy or not a EU member.
- For supplier invoice with positive amount, a document type is “TD10” if the Country of the document address of the supplier is EU member (Excluding Italy) and the **EU Operation** check box on the **Tax Codes** page is selected.
- For supplier invoice with positive amount, a document type is “TD11” if the Country of the document address of the Supplier is EU member (Excluding Italy) and in the **Tax Codes** page the **EU Operation** check box is NOT selected.
- For supplier invoices with negative amount the document type is always “TD04”.

### 12.3.5 CREATE TRANSACTIONS

Use standard functionality to create customer invoices and supplier invoices. Update the vouchers to the General Ledger and update tax ledger. Read more in the [cloud documentation](#).

### 12.3.6 CREATE SPESOMETRO DECLARATION

Open the **Financials/Financial e-Reporting/Spesometro Declaration Proposal** page. Click on the command button **New Spesometro Declaration**.

- Enter proposal description;
- Define period range;
- Specify the proposal type you want from one of the following to create the report for and click OK

CUSTOMER: Tax transaction from customer invoices will be included in the Declaration.

SUPPLIER: Tax transaction from supplier invoices will be included in the Declaration.

CORRECTION: Create a correction declaration.

#### Note:

When **To Period** is earlier than 01.01.2019 then tax transactions for all customer/supplier invoices are selected to the proposal.

When **To Period** is 01.01.2019 or later then only foreign supplier invoices and customer invoices which have **Response Status** not equal to "Accepted" are selected (i.e. customer invoices not reported to SDI system. See chapter describing e-invoices in FatturaPA format).

#### 12.3.6.1 View transactions in proposal

The created proposals are visible in the **Spesometro Declaration Proposal** page.

Select the proposal you want to view. The details of the proposal will be displayed in the **Details** pane.

Line No	Tax Trans ID	Riscal No of Completed Body	Company Riscal No	Company Tax ID	Tax Percentage	Tax Type	Supplier/Customer Identity	Name	Address ID	Address
1	201032	01080490327	00104715578	10400715758	25.00 %	Tax	IT CUS-1	Italian Customer-1	01	No. 122
2	201031	01080490327	00104715578	10400715758	25.00 %	Tax	IT CUS-1	Italian Customer-1	01	No. 122
3	201030	01080490327	00104715578	10400715758	25.00 %	Tax	IT CUS-1	Italian Customer-1	01	No. 122

**Nature of Operation, Document Type** and **VAT Recoverability** are set according to the basic data setup and visible from the proposal details.

#### 12.3.6.2 Modify data in Spesometro Declaration

Transactions included in the proposal can be modified in the **Spesometro Declaration Proposal** page. The **Manually Added**, **Modified By** and **Modified Date** columns are updated when a change is performed in the proposal.

Tax Amount	Tax Base Amount in Acc Curr	Tax Curr Amount	Tax Base Curr Amount	Nature Of Operation	Document Type	Recoverable VAT	File ID	Manually Added	Modified By	Modified Date
-750.00	-3000.00	-750.00	-3000.00	N7		I	IT01080490327_DF_00003	Yes	DEENLK	22/01/2020

Once the transactions are verified, select the **Acknowledge** command button to acknowledge the proposal.

Once the proposal is acknowledged, click on the **Generate XML File** command button to generate the XML file.

The status of the proposal will then change to Closed.

Financials > Financial Reporting > Spesometro Declaration Proposal

### 12.3.7 CREATE CORRECTION SPESOMETRO DECLARATION

When you have to communicate a cancellation of a declaration to the tax authorities, you have to create a correction proposal.

- Go to *Financials/Financial e-Reporting/Spesometro Declaration Proposal*
- Click on the **New Spesometro Declaration Proposal** command button
- The *New Spesometro Declaration Proposal* dialog box is opened;
- Enter a value in the **Proposal Description** field;
- Define dates for **To Period** and **From Period** fields;
- Switch on the **Correction** switch in **Proposal** type and click **OK**.

The dialog box titled "New Spesometro Declaration Proposal" contains the following fields and controls:

- Proposal Id:** 4
- Description:** Correction January 2018
- Period Selection:**
  - Period Type:** ☒ Period, ☐ Date
  - From Year:** 2018, **From Period:** 1, **To Year:** 2018, **To Period:** 1
- Proposal Type:**
  - Customer Type:** ☐
  - Supplier Type:** ☐
  - Correction:** ☒ (highlighted with a red box)
- Buttons:** OK, Cancel

Correction proposal is created.

Proposal ID	Description	Created Date	From Year Period
4	Correction January 2018	2020-01-22 00:00:00.0	2018 - 1
To Year Period	From Date	To Date	User ID
2018 - 1	01/01/2018	31/01/2018	DEENLK
CORRECTION (highlighted with a red box)			

- Select the created Correction type proposal and in the **Details** pane create a new record
- Enter value for **File ID** field for the declaration that is going to be corrected and add the number for the **Position** field. This is the xml position in the previously generated xml file of the invoice you are going to correct.
- Save the information.

Financials > Financial e-Reporting > Spesometro Declaration Proposal

Company: **DF-Italy**

### 12.3.8 DELIMITATIONS

None.

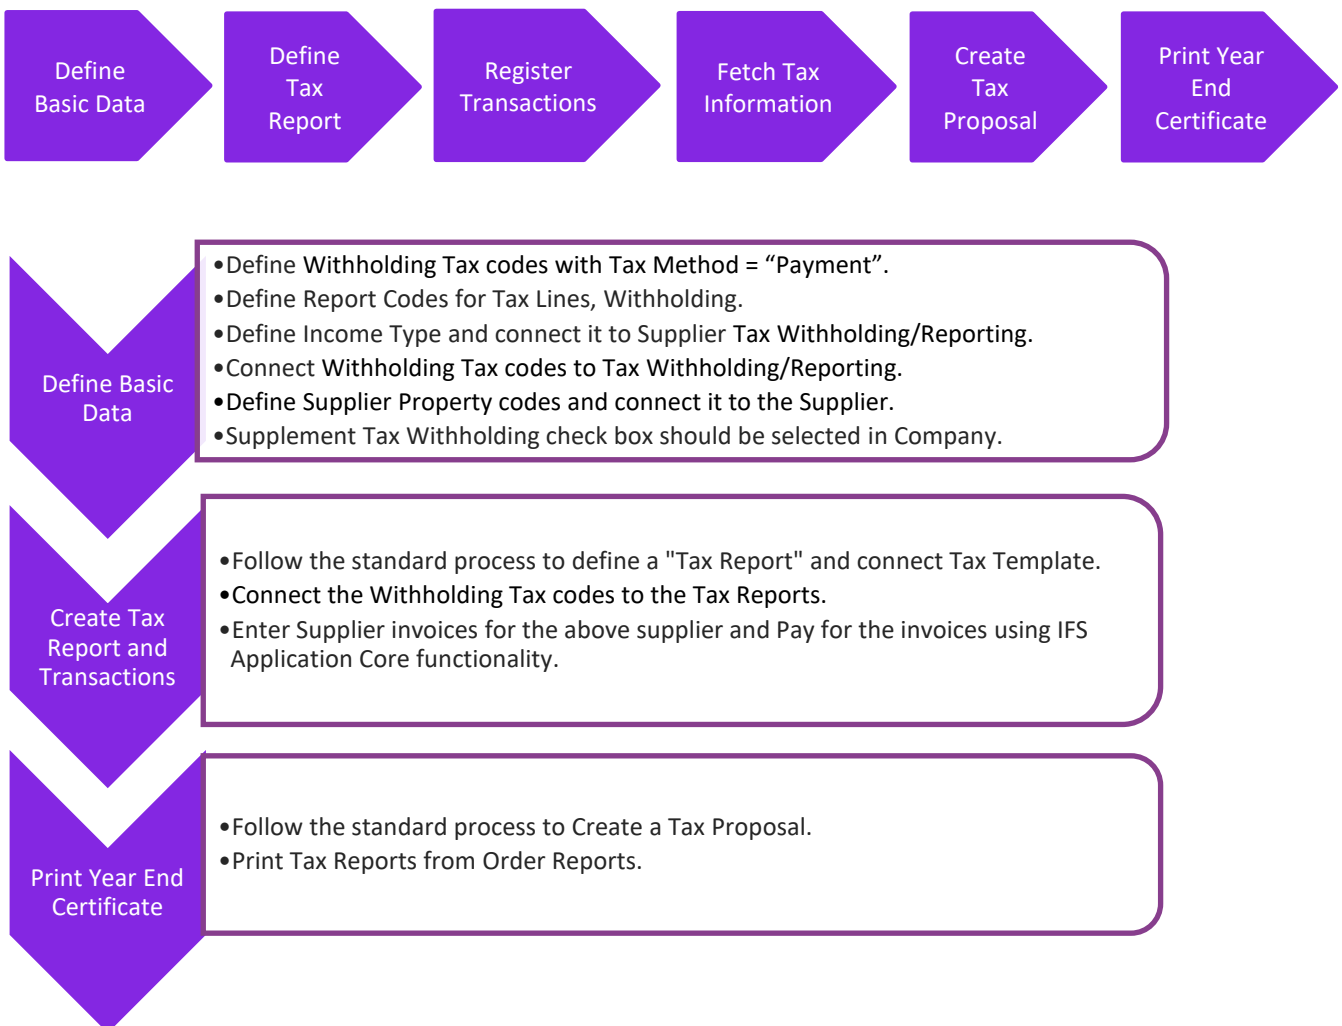

## 13 Year End Certificate

### 13.1 Overview Legal Requirements

Year End Certificate is a report created by companies and sent to their suppliers. It is also called Consultant Card Report. The company declares to the supplier (consultant) the tax amount which has been paid on behalf of them. This report is created annually covering the transactions from January to December.

### 13.2 Process overview

Below are the steps to follow to create the Year End Certificate tax report:

### 13.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter and the "Year End Certificate" localization parameter must be enabled.

## 13.4 Basic data

### 13.4.1 DEFINE TAX CODE

Using standard functionality create withholding tax codes in the **Accounting Rules/Tax/Tax Codes** page with tax method set as “Payment”. At least two codes one for income tax and one for insurance paid on behalf of suppliers.

Accounting Rules > Tax > Tax Codes

Company: DJ-Italy

**Tax Codes**

Tax Texts per Tax Code Tax Withholding Copy to Companies Translation

(1)	Tax Code	Description	Tax Type	Tax (%)	Deductible (%)	Valid From	Valid To	Tax Method Tax Received	Tax Method Tax Disbursed	Tax Amount at Invoice Printout	Tax Amount Limit in Accounting Currency	Tax Reporting Category
<input checked="" type="checkbox"/>	IT3	Italian Tax- Payment Ty...	Tax Withhold	15	100	01/01/2018	31/12/2049	Payment	Payment	Separate from Price	None

### 13.4.3 DEFINE INCOME TYPE FOR THE SUPPLIER

Go to **Enterprise/Tax/Income Types** page and define a new Income type for the country IT.

Application Base Setup > Enterprise > Tax > Income Types

**Income Types**

Country Code: IT Income Type Description More Favorites Clear Q Settings

Country Code	Income Type	Description	1099 Threshold Currency	1099 Threshold Amount	Report Code	Tax Withholding Code
IT	1040	Professionals	EUR	0.00		Optional

Go to **Supplier/Invoice/Tax Information** page and make sure that **Tax Withholding/Reporting** is setup as “Report Income/ Withhold Tax” via the drop-down list. This will enable the command button **Tax Withholding/Reporting** on the **Supplier/Invoice/Tax Information** page, click on the that command button to connect the income type and default withholding tax codes.

Application Base Setup > Enterprise > Supplier > Supplier > Invoice > Tax Withholding/Reporting

Supplier: IT-SUP-WHT - IT Supplier With Holding Tax  
Supplier Tax Office ID:   
Withholding Base: Invoice Net Amount  
Tax Certificate Form: Not Used

**Tax Exempt Information**  
Tax Exempt: ☐ Validity Period:   
US Specific 1099 Reporting  
Legal Identity Name:   
Legal Address ID:   
Legal Identity: ☐ 2nd TIN Notifications: ☐

**Supplier Income Type**

Income Type	Default Income Type	1099 Threshold Currency	1099 Threshold Amount	Supplier 1099 Threshold Amount
Income Type				
1040 - Professionals	Yes	EUR	0.00	

**13.4.4 CONNECT WITHHOLDING TAX CODE TO TAX WITHHOLDING/REPORTING**  
Add the relevant withholding type tax codes connecting income types and report codes (codes 5 or 6) on the **Default Tax Withholding Codes** section in the **Tax Withholding/Reporting** page.

Application Base Setup > Enterprise > Supplier > Supplier > Invoice > Tax Withholding/Reporting

**Supplier Income Type**

Income Type	Default Income Type	1099 Threshold Currency	1099 Threshold Amount	Supplier 1099 Threshold Amount
Income Type				
1040 - Professionals	Yes	EUR	0.00	

**Supplier State Tax Information**

Report Code:   
Country Code:   
State:   
(No data)

**Default Tax Withholding Codes**

+ - Save Cancel New

(1)	Tax Code	Tax (%)	Income Type	Report Code	Country Code	State
<input checked="" type="checkbox"/>	IT3	15	1040	6 - Insurance Tax Withhold	IT	
<input type="checkbox"/>	IT2	15	1040 - Professionals	5 - Income Tax Withhold	IT	

Withholding tax amounts connected to a tax code with report code 5 and report code 6 will be shown in the **Income Tax Amount** column and the **Contribution Amount** column of the Year End Certificate report respectively.

**13.4.5 DEFINE SUPPLIER PROPERTY CODE**  
Go to *Financials/ Supplier Invoice/Basic Data/Invoice Property Codes* and define property codes.

Financials > Supplier Invoice > Basic Data > Invoice Property Codes

**Invoice Property Codes**

+ -

Property Code	Description
PLACE_OF_BIRTH	Supplier Place of Birth
BIRTH_DATE	Supplier Birth Date

Connect the above property codes to the supplier from *Supplier/Invoice/Properties* tab.

Application Base Setup > Enterprise > Supplier > Supplier > Invoice

## Invoice

IT-SUP-WHT - IT Supplier With Holding Tax 4 of 4

Supplier: IT-SUP-WHT Name: IT Supplier With Holding Tax Association No: IT-SUP-WHT

Company: DJ-ITALY - DJ- Italy

Attachments

### Note:

Due to General Data Protection Regulation (GDPR), whenever property code values of "BIRTH\_DATE" or "PLACE\_OF\_BIRTH" are entered or modified on *Supplier/Invoice/Properties* tab an information message will pop up informing that this information is subject to GDPR and that it is the user's responsibility to use personal data with the natural person's consent only.

## 13.5 Define tax reports

### 13.5.1 TAX TEMPLATE

Tax template - GIT005 is added to fetch tax transaction and to create the Year End Certificate report.

Financials > Tax Ledger > Basic Data > Tax Templates

## Tax Templates

View Obsolete Tax Templates

Tax Template	Country Code	Tax Direction	Template Field Control	Template Column Control	File Type	File Template	XML Layout ID
GIT005 - Italian Supplier Tax Wi...	IT	Disbursed	Can	Blocked			

### 13.5.2 TAX TEMPLATE FIELD CONTROL

Search and select tax template GIT005 from **Tax Templates** page and click on the command button **Field Control Basic**. In the **Tax Template Field Control Basic** page, a new field of **Data Type-Date** is added to control payment date. During tax proposal creation, you must enter payment date to print the Year End Certificate report.

Financials > Tax Ledger > Basic Data > Tax Templates > Tax Template Field Control Basic 1 of 1

**Tax Template Field Control Basic** GIT005 - Italian Supplier Tax Withholding - IT

Tax Template: GIT005 - Italian Supplier Tax Withh... Country Code: IT System Defined: Yes

### 13.6.3 CALCULATION BASIS

- Withholding Base Amount:

Sum of column Tax Base Amount from Tax Transactions lines with transaction code PP49 and withheld Tax Code 5.

- Gross Amount

Sum of payments to the Invoice = A

- Percentage of Payment

$$X = \left[ \frac{A}{(A-C)} \right]$$

A: Gross Amount (Sum of payment to the Invoice)

C: Withholding Tax Amount

- Vat Amount:

$$Y = \left( \frac{A}{(A-C)*D} \right) * X$$

A: Gross Amount (Sum of payment to the Invoice)

C= Withholding Tax Amount

D=Vat amount in Invoice

X= Percentage of Payment

- Retirement Contribution:

$$Z = [(A - B - Y) * X]$$

A= Gross Amount (Sum of payment to the Invoice)

B= Withholding Base Amount

Y= Vat Amount

X= Percentage of Payment

- Income Tax Amount: (E)

Tax Amount from Tax Transactions lines with transaction code PP49 and withheld Tax Code 5

- Contribution Amount: (F)

Tax Amount from Tax Transactions lines with transaction code PP49 and withheld Tax Code 6

- Net to Pay:

$$P = (A - E - F)$$

A: Gross Amount (Sum of payment to the Invoice)

E: Income Tax Amount

F: Contribution Amount

## 13.7 Delimitations

No known.

## 14 Intrastat Reporting

### 14.1 Overview Legal Requirement

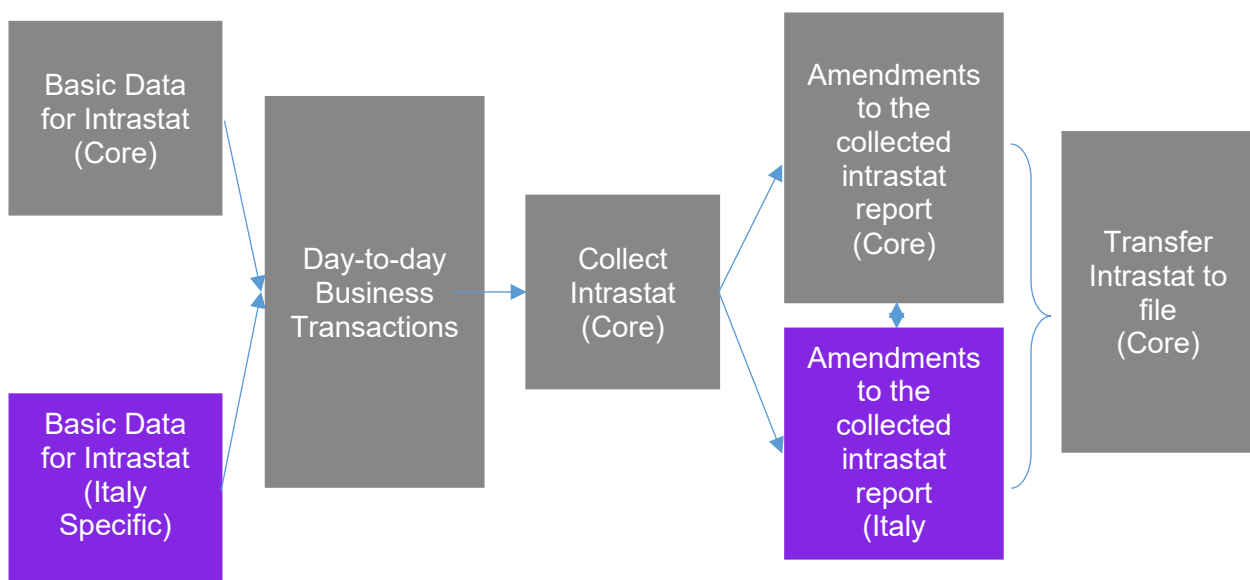

Intrastat is the system for collecting information and producing [statistics](#) on the goods trade between countries of the [European Union](#) (EU). It began operation on 1 January 1993, when it replaced customs declarations as the source of trade statistics within the EU. The requirements of Intrastat are similar in all [member states of the EU](#), although there are important exceptions.

Italian companies are obliged to report Intrastat for the imports and exports of goods and of services with different frequencies dependent on the imported and exported amount. Following additional information need to be included in the Italian Intrastat report.

- Summary of Sales of Goods
- Detailed Sales of goods
- Correction on previously reported Sales of goods
- Summary of Purchase of Goods and Service
- Detailed Purchases of goods
- Correction on previously reported Purchases of goods
- Detailed Purchases of Services
- Correction on previously reported Purchases of Services
- Inclusion of advance invoices
- Adjustments to previous Intrastat declarations of goods and services

### 14.2 Process

Following steps needs to be followed to generate the Intrastat file:

## 14.3 Prerequisites

The company must be set-up to use Italian localization, see the [Company Set up](#) chapter. The “Additional information in Italy Intrastat” localization functionality must be enabled.

Basic data for IFS Cloud Intrastat functionality must be defined.

### 14.3.1 DEFINE NEXT INTRASTAT FILE NUMBER

New **Next Intrastat File Number** field is added to the *Company/Supply Chain Information/Warehouse Management* tab. Enter the next Intrastat file number in this field. Value in this field is incremented automatically when a new Intrastat file is generated.

This number is used when the Intrastat file is created from the **Intrastat** page.

## 14.4 Create transactions for intrastat reporting

Using standard functionality, create customer and supplier invoices. Make payments for the invoices created using the payment methods available.

## 14.5 Collect intrastat

Open the **Collect Intrastat** assistant to collect Intrastat transactions. Enter the selection criteria and press **OK** button.

This is standard functionality. Refer to IFS Cloud Documentation for more information.

## 14.6 View collected intrastat transactions

Go to the **Intrastat** page and search for the Intrastat report collected. This is standard functionality. Refer IFS Cloud Documentation for more information.

Warehouse Management > Intrastat Reporting > Intrastat

## 14.7 Italian intrastat

### 14.7.1 INVOICING BEFORE ARRIVAL OF PURCHASE ORDERS

When a supplier invoice is created before the actual arrival is done (in a later period), when collecting Intrastat for the Italian company, voucher date of the supplier invoice is set as the **Previous Intrastat Period** in the **Intrastat** page.

Warehouse Management > Intrastat Reporting > Intrastat

**Intrastat** 200035 - 9/1/2020 - 9/30/2020 - MAABLK-COM-01 - IT 1 of 1

Search for those rows in the **Intrastat** page and analyze if the line with a value in the **Previous Intrastat Period** column to be included in the earlier period. The new **Adjust to Previous Intrastat Period** option is added to indicate such adjusted lines.

## 15 Warehouse Journal Data

### 15.1 Overview Legal Requirement

In Italy, it is a legal requirement to provide an annual warehouse journal printout on a specific paper format. The warehouse journal is provided on a monthly basis. The printing must be done on paper within 3 months following the presentation of the tax return for the corresponding period.

The warehouse journal report must present a summary of physical inventory transactions in chronological order, sorted by physical transaction date or by warehouse. It must contain the start balance in a period (the quantity in stock at the beginning of a period), all stock movements made in a specific location, and the end balance (quantity in stock) on that period; specifying the reason for each movement and a reference to the paper document (e.g. a delivery note).

### 15.2 Prerequisites

The company must be set up to use Italian localization, see the [Company Set up](#) chapter. And then:

- “Warehouse journal report data” localization functionality must be enabled.
- “Alternative delivery note number in chronological order” localization functionality must be enabled.
- “Automatic update of date applied on inventory transactions” localization functionality must be enabled.
- “Transport delivery note” localization functionality must be enabled.

### 15.3 Define Delivery Reasons

Define delivery reasons to be presented in the updated warehouse journal. Delivery reasons are connected to inventory movements. Define delivery reasons on the **Delivery Reasons** page.

Delivery Reason ID	Description
BOI DELIVERY	BOI approval.

### 15.4 Connect Delivery Reason

Connect the delivery reason to the delivery note and the transport delivery note in **the Delivery Note Analysis** and **Transport Delivery Note** pages.

## Transport Delivery Note

## Customer Order / Shipment Delivery Note Analysis

New editable fields **Eur-Pallets Qty**, **Delivery Reason** are added to *CO/ Shipment Delivery Note Analysis*, *Misc Delivery Info* button.

## 15.5 Print Customer Order/Shipment Delivery Note and Transport Delivery Note

- Print the delivery note using standard functionality, customer order creation releases the delivery note to be printed.
- Create the transport delivery note for the inventory movement transactions.
- Print the transport delivery note using the **Print** Button option in the **Transport Delivery Note** page. When printing additional information is fetched to the **Inventory Transactions History** page.

Following fields are added to the warehouse journal report and added to the **Inventory Transactions History** page.

- *Delivery Reason*
- *Delivery Reason Description*
- *Delivery Note Date*
- *Alternative Delivery Note Number*

Warehouse Management > Transaction History > Inventory Transactions History

### Inventory Transactions History

Transaction ID	Transaction Code	Part	Site	Configuration ID	Direction	Quantity	Alt Delivery Note No	Delivery Note Date	Delivery Reason ID	Delivery Reason Description	Date Applied Modified by User	Applied Date
216670	OESHIP - Ship Inventor...	LW USB - LW USB Drive	LW S4 - Venus	*	-	1 PCS						1/21/2020

## 15.6 Update Warehouse Journal Data

- Select the *Update Warehouse Journal Data* assistant to update the warehouse journal data.
- Select the company to be updated and all warehouse journal data for that company will be fetched and presented in the **Warehouse Journal Data** page.

The update will run the calculations for all the previous accounting periods. It's recommended to schedule the update as a background job once per accounting period.

Warehouse Management > Warehouse Journal > Update Warehouse Journal Data

## 15.7 Warehouse Journal Data

The *Warehouse Journal Data* assistance is added to view the warehouse journal data. Closing balance per location for the period is calculated based on the inventory part, configuration ID, location and condition code.

In addition to information from inventory transaction history, the warehouse journal includes:

- Company

- Accounting period
- Opening balance
- Closing balance
- Delivery reason
- Condition code
- Delivery note date
- Alternative delivery note number

Warehouse Management > Warehouse Journal > Warehouse Journal Data
